

BRIEFING PAPER

Number 7577, 3 May 2016

Economic Indicators, May 2016

By Anna Moses and Matthew Ward

GDP growth

% change on previous qtr

GDP grew by 0.4% in Q1 2016. This was lower than the 0.6% growth seen in Q4 2015.

Employment Rate; UK

%, age 16-64

The employment rate was 74.1% in the quarter to February 2016. The unemployment rate was 5.1%.

Consumer Prices Index (CPI)

% change on yr

CPI inflation was 0.5% in the year to March 2016. This is the highest rate of inflation since December 2014, but still below the Bank of England's target of 2.0%.

2. This month's developments

GDP growth lower

GDP grew by 0.4% in Q1 2016. This was lower than Q4 2015, when growth was 0.6%.

Inflation up, but still very low

The Consumer Price Index rose by 0.5% in the year to March 2016. This is the highest rate of inflation since December 2014, but still below the Bank of England's target of 2.0%.

Employment and unemployment steady

The headline rate of employment for 16-64 year olds was 74.1% in December 2015 to February 2016. In the same period, the headline unemployment rate was 5.1%. Both these figures are broadly unchanged compared with the preceding quarter.

Manufacturing confidence down

Confidence among manufacturers in April fell to its lowest level since March 2013. This was driven by lower than expected domestic demand and export growth, suggesting that the recent contraction in manufacturing output is set to continue.

3. Introduction to Economic Indicators

Economic Indicators is published on the first Tuesday of the month. Individual indicator pages are updated more frequently as new data becomes available and are published on the Library's webpages.

Feedback

If you have any comments or suggestions about Economic Indicators please contact either Anna Moses (ext. 6933) or Matthew Ward (ext. 5919).

Weekly email alert

A weekly email alert with updated indicators is available to Members and their staff on request. To subscribe, please visit the [Economic Indicators web pages](#).

Regional Economic Indicators

A separate briefing, [Regional and National Economic Indicators](#), is available containing key economic data on the regions and countries of the UK, compared to the national UK average.

Sources and glossary

A guide to sources is provided in Section 5. Economic terms, symbols and abbreviations used in the publication are provided in Section 6.

Contacts

Members and their staff are encouraged to talk to Library subject specialists. A comprehensive guide is available in Using the Library. Researchers are not able to discuss pages with members of the public. For enquiries please contact the following specialists:

A1: Gross Domestic Product

The economy grew by 0.4% in real terms in Q1 2016 compared with the previous quarter, following growth of 0.6% in Q4 2015.

Real Gross Domestic Product
seasonally adjusted

	% change on qtr	% change on yr
2012	...	1.2
2013	...	2.2
2014	...	2.9
2015	...	2.2
2015 Q1	0.4	2.6
Q2	0.6	2.4
Q3	0.4	2.1
Q4	0.6	1.9
2016 Q1	0.4	2.1

GDP was 2.2% higher in 2015 compared with 2014.

GDP has now increased for 13 consecutive quarters and is estimated to be 7.3% above the pre-economic downturn peak in Q1 2008.

GDP in cash terms was £1,864 billion in 2015.

A3: Components of GDP

GDP can be analysed in terms of the output produced of different industries of the economy and by expenditure on goods and services made by households, businesses and the government.

Overall, GDP increased by 0.4% in real terms in Q1 2016 compared with the previous quarter.

GDP by Industry

In 2014, the service sector accounted for around 78% of economic output, the production sector for 15% and the construction sector for 6%.

In Q1 2016, service sector output increased by 0.6% in real terms compared with Q4 2015. Manufacturing output was down by 0.4% (and overall the production sector declined by the same percentage). Output in the construction sector decreased by 0.9%.

GDP by Expenditure

Household consumption is the largest element of expenditure, accounting for 62% of the total in 2015. Government consumption accounted for 19% and investment for 17%.

Household Consumption
quarterly growth (%)

In Q4 2015, household consumption grew by 0.6% in real terms compared with Q3 2015. Government consumption was up 0.3% and investment was down 1.1%.

Exports rose by 0.1% while imports increased by 0.9%.

GDP by expenditure

% change on previous quarter (real terms)

	Household consumption	Government consumption	Investment	Exports	Imports	GDP
2014 *	2.6	2.5	7.3	1.2	2.4	2.9
2015 *	2.8	1.5	4.1	5.1	6.3	2.3
2014 Q4	0.6	-0.3	0.1	3.8	2.8	0.7
2015 Q1	0.8	0.4	1.5	-0.1	3.5	0.5
Q2	0.7	0.7	1.3	2.8	-2.5	0.6
Q3	0.6	0.7	0.4	-0.5	2.9	0.4

ONS, [Gross Domestic Product: Preliminary Estimate](#), 27 July 2016

A4: Productivity

One of the most important factors in determining living standards is productivity – how much output is produced for a given input (such as an hour of work).

The more efficient the economy is, the more that can be produced in a sustainable fashion. In other words, higher productivity growth leads to a higher long-term growth rate of the economy.

Economic theory states that labour productivity also determines wages: the more productive an employee is, the more they are likely to be paid.

UK productivity

The average increase historically in the UK has been about 2% but in the eight years since the recession began, productivity has stagnated. The Office for National Statistics in March 2015 [said](#) this is “unprecedented in the post-war period”.

Productivity across the whole UK economy, measured by output per hour, is estimated to have increased by 0.9% in 2015, the most since 2011, though still below historical trends. After improving in the first three-quarters of the year, productivity fell in Q4 2015 by 1.2% compared with the previous quarter (due to more hours being worked). The productivity level is now below its peak level of Q2 2008.

Productivity level (GDP per hour)

Index where Q1 2007 level = 100

Productivity - output (GDP) per hour

	% change on qtr	% change on yr
2014	..	0.1

International comparisons

International comparisons of productivity levels are presented in the chart below as an index where the UK=100.

Productivity (GDP per hour), 2014

Index where UK=100

In 2014, based on GDP per hour, the UK came sixth highest out of the G7 countries, with Germany top and Japan bottom. UK productivity was 18 percentage points below the average of the rest of the G7 countries, the widest productivity gap since at least 1991 (when the ONS data series began).

A5: Services

The service industries include the retail sector, the financial sector, the public sector, business administration and cultural activities.

In 2013, the service industries accounted for 78% of total UK economic output (Gross Value Added) and accounted for 83% of jobs in September 2015.

Services Output

Output - Index of Services
% change on previous year

Output increased by 0.1% in February compared to January. Compared with a year before, it has increased by 2.5%.

Purchasing Managers' Index (PMI)

UK Services PMI
50 = no change

The Markit/CIPS UK Services PMI is important indicator of output and confidence in the sector.

In March it was 53.7 (where a figure above 50 indicates that output is increasing). This is the slowest rise in new business since January 2013.

Services Output Index

	Index	% change on yr

A6: Manufacturing

Manufacturing is one of the production industries, which also include mining, electricity, water & waste management and oil & gas extraction.

In 2014, the manufacturing sector accounted for 11% of total UK economic output (Gross Value Added). In Q3 2015 it accounted for 8% of jobs.

Manufacturing Output

Output - Index of manufacturing
% change on previous year

Total output decreased by 1.1% in February 2016 compared to January.

Compared with a year before, manufacturing output decreased by 1.8%.

Purchasing Managers' Index (PMI)

UK Manufacturing PMI
50 = no change

The Markit/CIPS UK Manufacturing PMI is an important indicator of output and confidence in the sector.

In April 2016 it was 49.2, a decrease of 1.8 points on March (where a figure above 50 indicates that output is increasing).

Markit/CIPS, [UK Manufacturing PMI](#), 1 June 2016

ONS, [Index of Production](#), 11 May 2016

B1: Inflation

The Consumer Prices Index (CPI) is the main measure of inflation. It is produced in line with international standards and is the measure used for the Bank of England’s 2% inflation target. The Retail Prices Index (RPI) is no longer classified as a National Statistic as the way it is calculated does not meet international standards. It is included here as it is well-known and is the longest running measure of inflation.

Consumer Prices Index (CPI)
% change on yr

The CPI inflation rate was 0.5% in March, 0.2% points higher than February. The RPI inflation rate increased by 0.3% points to 1.6%.

The main contribution to the increase came rises in air fares and clothing prices. The upwards pressures were partially offset by a fall in food prices and a smaller rise in petrol prices than a year ago.

Consumer Prices Index (CPI)
% change on yr

Price Indices

% change on a year ago

Update
ONS, [Consumer Price Indices](#), 17 May 2016

B2: International inflation

Inflation in the EU, some other European countries, and the US can be compared using the standard Harmonised Index of Consumer Prices (HICP), or the CPI as it is known in the UK.

UK inflation was 0.5% in the year to March 2016, up from 0.3% in February.

Eurozone inflation in April is provisionally estimated as -0.2%, down from 0.0% in March.

Inflation was negative in a number of large EU economies in March, including France, Italy, Spain and Poland. Inflation in Germany was 0.1% in March compared with -0.2% in February. Belgium had the highest annual inflation rate in the EU at 1.6% in March, followed by Sweden at 1.2%. The lowest annual inflation rate in the EU was Romania (-2.4%) followed by Cyprus (-2.2%).

HICP inflation in the US in the year to February was +0.3%, compared with 0.8% in January.

B3: Average Earnings

In April 2015 median gross weekly earnings for full-time employees were £528, up 1.8% on April 2014.

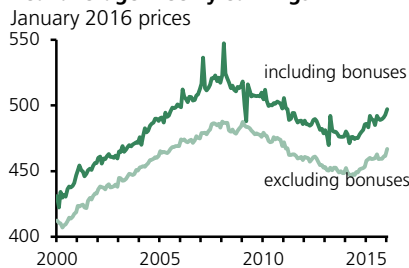

More timely but less detailed data show average weekly earnings for the whole economy, including bonuses, were 1.8% higher in the three months to February 2016 compared with the year before. Excluding bonuses, average weekly earnings increased by 2.0%. Inflation as measured by the CPI averaged 0.3% over the same period.

Average Earnings, Whole Economy

Inflation and earnings (incl bonuses)

Real average weekly earnings

Trends by Sector

Annual % change in average earnings (including bonuses), Great Britain

	Total	Private	Public
2014 Feb	1.8	2.0	0.1
2015 Feb	1.7	2.0	1.3
2015 Dec	1.9	2.1	1.2
2016 Jan	2.1	2.4	1.3
Feb	1.8	1.9	0.9

Note: Data show annual % change in earnings to three month period ending in given month; data are seasonally adjusted

Source: ONS, Average Weekly Earnings series

Average total weekly pay (including bonuses) grew by 1.9% in the **private sector** in the three months to February 2016, compared with the year before. In the **public sector**, total pay increased by 0.9%.

Sectors seeing larger increases in average earnings over the year to February 2016 included **construction** (up 7.7%).

Pay Levels

Median hourly pay excluding overtime
April 2015 (£)

Median weekly earnings for full-time employees in the UK were £528 in April 2015. (The median is the point at which half earn more and half earn less).

Median hourly earnings (excluding overtime) were £13.29 for full-time employees; £13.84 for men working full-time and £12.54 for women.

Median hourly earnings (excluding overtime) were £8.44 for part-time employees; £8.04 for men working part-time, and £8.56 for women. Women are more likely than men to work part-time.

C1: Employment

31.41 million people were in employment in December 2015-February 2016, up 20,000 from the previous quarter and up 360,000 on the previous year. The employment rate (the proportion of the population aged 16-64 in work) was 74.1%, up 0.7% points on the previous year and the joint highest rate since comparable records began in 1971.

Employment Rate; UK
%, age 16-64, seasonally adjusted

Employment; UK
Millions, age 16+, seasonally adjusted

16.79 million men were in work in December 2015-February 2016, 60,000 higher than the previous quarter. The employment rate for men aged 16-64 was 79.2%.

Female employment fell by 40,000 over the past quarter to 14.62 million. The employment rate for women aged 16-64 was 69.1%.

4.64 million people were self-employed, 25,000 higher than in the previous quarter. The number of people working as employees fell by 23,000, to 26.56 million.

22.98 million people were working full-time December 2015-February 2016, up 17,000 on the previous quarter and 289,000 higher than a year earlier. There were 8.43 million people working part-time, an increase of 3,000 from the previous quarter and 71,000 higher than a year earlier.

1.64 million people were employed on a temporary basis in December 2015-February 2016, up 4,000 from the previous quarter and down 42,000 compared to the year before.

C2: Unemployment

The International Labour Organisation (ILO) definition of unemployment is the headline measure of unemployment in the UK. The number of people out of work claiming Universal Credit (UC) and Jobseeker's Allowance (JSA) and predecessor unemployment benefits is also used.

Unemployment; UK
000s, age 16+, seasonally adjusted

Unemployment Rate; UK
%, age 16+, seasonally adjusted

ILO unemployment was 1.70 million people in the UK in December 2015-February 2016, up 21,000 from the previous quarter but down 142,000 from the previous year.

The unemployment rate was 5.1% (the percentage of the economically active population who are unemployed), unchanged on the previous quarter and down 0.5% points on the previous year.

The number of people claiming JSA (adjusting for Universal Credit) increased by 6,700 between February and March to 732,100 people aged 18 or over.

There were 929,000 men unemployed in December 2015-February 2016, down 9,000 on the previous quarter. 767,000 women were unemployed, up 12,000 on the previous quarter.

C3: Unemployment International

The OECD produces harmonised unemployment rates for OECD members based on the ILO definition of unemployment.

Harmonised Unemployment Rate (%)

The UK harmonised unemployment rate for Q3 2015 was 5.3%. This was below the rate of France and Italy but above that of Germany.

In the US, the unemployment rate stood at 5.0% in Q4 2015, down from 5.2% in Q3.

In the Eurozone, the unemployment rate was 10.5% in Q4 2015, compared to 10.7% in Q3 2015.

Spain and Greece have the highest harmonised unemployment rate out of 34 OECD member states (21.0% and 24.7%)

Japan, Korea and Iceland had the lowest unemployment rate in the OECD in Q4 2015 at (3.3% and 3.5%).

Youth (15-24) unemployment is a major issue in many developed economies at present. In Q3 2015 youth unemployment was 47.8% in Spain and 49.8% in Greece. In the same period UK youth unemployment stood at 14.5%.

Updates

OECD, [Harmonised Unemployment Rates](#),
12 May 2016

D1: Interest Rates and Monetary Policy

The Bank of England has left the Base Rate in the UK unchanged at 0.5% since March 2009 – the lowest since the Bank was founded in 1694.

The Governing Council of the European Central Bank (ECB) lowered the main interest rate for the Eurozone to 0.00% and the deposit rate to -0.40% in March 2016.

The US Federal Reserve increased its target range for the federal funds rate to between 0.25-0.5%

on 16 December 2015. This is the first increase since 2006. The Fed had previously signalled they would raise rates by the end of 2015.

Quantitative Easing

With little room for further cuts in interest rates, the Bank of England initiated an asset purchase or quantitative easing (QE) programme in March 2009.

From an initial £75bn in March 2009, QE was increased by £125bn (to a total of £200bn) by November 2009. It was further increased as follows: up by £75bn (to £275bn) in October 2011; £50bn (to £325bn) in February 2012 and £50bn in July 2012 to a total of £375bn.

The majority (over 99%) of assets purchased by the Bank of England through QE have been gilts (UK government debt).

On 21 April 2016 the ECB expanded the QE programme established in January. It will now buy €80bn assets (mostly government bonds of Eurozone countries) (up from €60bn in January) each month until at least September 2016. The ECB has implemented this programme to raise the rate of inflation to its 2% target (inflation was -0.2% in Dec 2014).

The Federal Reserve in the US, has run three programmes of QE since the Great Recession. The first from December 2008 to March 2010 saw the Fed buy \$1.75 trillion of mortgage-backed securities and government debt between December 2008 and March 2010. The second programme involved the Fed buying about \$600bn in new assets between November 2010 and June 2011. The third programme, so-called QE3, ran from September 2012 to October 2014 and saw the Fed purchasing assets (mortgage debt and government debt) of around \$1.6 trillion.

Financial Times, Weekly Basis

E1: Trade

In 2015, the UK's exports of goods and services totalled £512 billion and imports totalled £548 billion. The EU accounted for 44% of exports of goods and services in 2015 and 53% of imports.

Balance of trade, goods and services
£ billion, monthly data

Overall, the UK imports more than it exports meaning that it runs a trade deficit. A surplus on trade in services (£88.7 billion in 2015) is more than offset by a deficit on trade in goods (£125.4 billion in 2015). The overall trade deficit was £36.7 billion (2.0% of GDP) in 2015.

The trade deficit increased to £12.2 billion in Q4 2015, up from £8.9 billion in Q3, as exports fell and imports increased.

Goods & Services and Current Account Balances

Seasonally adjusted

	Goods and Services (£bn)			Current Account balance

E2: Exchange Rates

The Sterling Exchange Rate Index (SERI) measures sterling’s value against a ‘basket’ of currencies, ‘trade-weighted’ (based on currencies’ relative importance in UK trade).

The SERI fell by 1.0% in March 2016. Compared with the same period a year ago, it is 5.1% lower. It is currently 11.1% above its March 2009 level, when it was at its lowest point since the series began in 1980. It is 18.7% below its pre-recession peak in July 2007.

Sterling Exchange Rate Index (SERI)

Jan 2005=100

On average in March, the pound was down 0.6% against the dollar compared to February. At the 2 May market close, the pound stood at \$1.47.

Sterling was down 0.3% against the Euro in March compared to February. At the 2 May market close the pound stood at €1.27. This compares with an all-time low of €1.02 (on 30 December 2008), and a launch rate of €1.48 on 31 December 1998.

F1: Business and Consumer Confidence

Confidence surveys, with information generally released ahead of official statistical data, can indicate changes to the economic outlook as well as turning points in the economic cycle.

European Commission Economic Sentiment Indicator

The European Commission conducts regular harmonised surveys for different sectors of EU member states' economies.

Between March 2016 and April 2016 the overall UK sentiment index fell by 1.6 points to 104.4, 8.0 points lower than a year earlier. The Eurozone index was up

0.1 points over the year to 103.9.

CBI Industrial Trends Survey

The CBI carries out monthly and quarterly Industrial Trends surveys.

In April 2016, more manufacturers thought that output would rise over the next three months than thought it would fall. The difference was +17, down on March's figure of +23 but up on February's +11.

GfK NOP Consumer Confidence Survey

GfK NOP's Consumer Confidence Index measures a range of consumer attitudes, including forward expectations of the general economic situation and households' financial positions, and views on making major household purchases.

The overall consumer confidence index was -3 in April 2016, down from 0 the previous month and from +4 the year before. This is the first time that the index has been negative since December 2014.

F3: Housing Market

On a seasonally adjusted basis, **house prices** on the ONS index increased by 0.4% between January 2016 and February 2016. Prices were 7.6% higher in February 2016 compared with a year ago.

Mortgage approvals in March 2016 were down by 2.5% on the previous month, but were 14.7% higher compared with a year ago. Approvals remain well down on pre-recession levels, but rose during 2015.

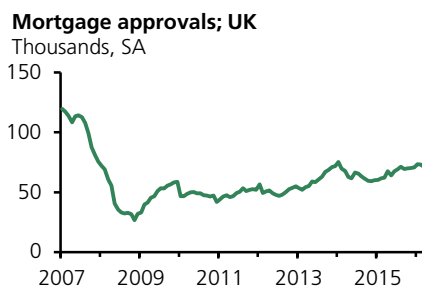

Housing starts increased by 6% in Q4 2015 compared to Q3 2015. Housing starts and completions have increased from the lows observed in late 2008 and early 2009 but remain below pre-recession levels.

On a seasonally adjusted basis, average mix-adjusted house prices in the UK increased by 0.4% between January 2016 and February 2016.

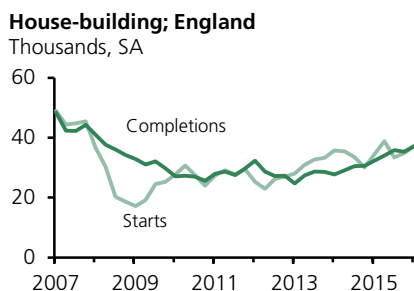

The ONS index is mix-adjusted to allow for differences between houses sold (e.g. type, rooms, location) in different months.

There are regional differences in house prices. The average mix-adjusted house price is highest in London at roughly £524,000. The lowest prices are found in Northern Ireland and the North East at £157,000 and £158,000 respectively.

Bank of England data on the number of mortgages approved to finance house purchases are a leading indicator of house sales.

There were 71,357 mortgage approvals in March 2016, down by 2.5% on the previous month, but up 14.7% on March 2015.

There were 37,080 seasonally adjusted house building starts in England in Q4 2015, a 6% increase on the previous quarter, and 23% up on the same quarter of 2014. This is above the recent low of 17,150 in Q1 2009, but still below the 48,970 starts in Q1 2007.

There were 37,230 seasonally adjusted dwelling completions in Q3 2015, up 5% on the previous quarter, and 22% higher than during the same quarter of 2014. Completions remain below the peak of 48,440 completions in Q1 2007.

F4: Household Debt

Household debt as a % of disposable income

Household debt peaked at 169% of household gross disposable income in Q1 2008.

Household debt: % of disposable income

In Q4 2015, it was 143%. It has been at roughly this level since the end of 2012.

Current average mortgage interest rates

The average Standard Variable Rate (SVR) has risen slightly over the past year – in March 2016 it was 4.67%, compared with 4.51% a year before.

Current average mortgage interest rates

Having fallen considerably over the past five years, the average 2-year fixed mortgage rate has steadied over the past year. In March 2016 it was 1.88% compared with 1.99% a year before.

Individual insolvencies, England and Wales

There were 20,383 individual insolvencies in England and Wales in Q1 2016, 2.2% lower than a year earlier (seasonally adjusted figures). Although lower than a year ago, the number of insolvencies was higher in Q1 2016 than in Q4 2015.

Individual insolvencies; England and Wales, Thousands

In Scotland, there were 2,232 individual insolvencies in Q1 2016, a decrease of 13.3% on a year earlier. In Northern Ireland, there were 664 individual insolvencies in Q1 2016, a decrease of 14.5% on a year earlier.

4. Glossary

4.1 Definitions¹

Balance of payments: A country's financial position, with other countries of the world, comprising two parts:

Current account: the balance of imports and exports of goods and services, income and transfers combined;

Capital account: the difference between a country's capital invested in other countries, and the capital invested by other countries in it. Technically, the two parts always balance. A balance of payments deficit normally refers to a current account deficit.

Balance of trade: The difference between a country's exports and imports of either goods only or goods and services combined. Trade in financial services account for around a third of UK exports, and thus partially offsets trade in goods deficits.

Basic prices: Prices excluding taxes and subsidies on products.

Claimant count: The number of people aged 18 and over claiming Jobseeker's Allowance (JSA) benefits. This includes out-of-work Universal Credit claimants.

Consumer Prices Index (CPI): This is the headline UK domestic measure of inflation. It measures the average change from month to month in the prices of consumer goods and services purchased in the UK.

Current account balance: The difference between receipts/payments due to transactions in goods, services, income and transfers between the UK and all other countries. A current account deficit means that total payments exceed total receipts; in the reverse case, the current account is in surplus.

Current budget: Measures the balance of public sector current account revenue over public sector current expenditure.

Current/constant prices: Current prices are the actual or estimated recorded monetary value over a defined period for a group of industries or products. They show the value for each item expressed in terms of the prices of that period.

Constant prices refer to volume measures whose values are derived by applying to current quantities, prices for a specific base period. They allow figures to be represented so that the effects of inflation are removed. The values for each time period are expressed in terms of the prices in a particular base period.

Economically active: Those aged 16 and over who are either in employment or unemployed.

Economically inactive: Those aged 16 and over who are neither in employment nor unemployed. This includes those who do not want a job, those who want a job but have not been seeking work in the last four weeks and those who want a job and are seeking work but not available to start work.

¹ Sources: ONS, HM Treasury, HM Revenue and Customs, Finance-Glossary.com.

Employment: The number of people with jobs as estimated by the Labour Force Survey (LFS). This includes all people aged 16 or over who did paid work, those who had a job that they were temporarily away from, those on government supported training and employment programmes, and those doing unpaid family work during the survey period. The employment rate refers to the number of people employed as a percentage of the working age population as measured by the LFS.

Exchange rate: The rate at which one currency is traded against another.

Gross Domestic Product (GDP): The total market value of goods and services produced after deducting the cost of goods and services used up in the process of production (intermediate consumption) but before deducting consumption of fixed capital (depreciation).

Gross Domestic Product – Real GDP: Also known as constant price or chained volume measure, this is a measure used to indicate change in the actual quantity of goods and services produced, by adjusting for inflation.

Gross Fixed Capital Formation (GFCF): Expenditure on fixed assets (buildings, vehicles etc.) either for replacing or adding to the stock of existing assets. Business investment is GFCF by the private sector and public corporations on transport equipment, other machinery and equipment and new dwellings and structures other than dwellings.

Gross Value Added (GVA): The difference between output and intermediate consumption for any given sector/industry. That is the difference between the value of goods and services produced and the cost of raw materials and other inputs which are used up in production. GVA is used to measure the productivity of sectors/industries and economies.

Harmonised Indices of Consumer Prices (HICP): Harmonised indices of consumer prices for Member States of the European Union, which enable comparisons to be made across countries. The UK's CPI measure uses HICP methodology.

Market prices: The prices actually paid by the purchaser for goods and services, including transport costs, trade margins and taxes. $\text{GDP at market prices} = \text{GDP at basic prices} + \text{transport prices paid separately} + \text{non-deductible taxes on expenditure} - \text{subsidies received}$.

Money supply: The total amount of money in an economy at a given time.

The Public Sector Net Borrowing (PSNB): This measures the public sector's accumulation of debt net of liquid financial assets. Its approximate stock equivalent is net public sector debt.

Public Sector Net Debt: This is approximately the stock analogue of the PSNB. It measures the public sector's financial liabilities to the private sector and abroad, net of short-term financial assets such as bank deposits and foreign exchange reserves.

Retail Prices Index (RPI): A domestic indicator of inflation. It measures the average change from month to month in the prices of goods and services purchased in the UK. It is similar to the CPI, but differs in terms of methodology and coverage. For example, the RPI includes housing costs such as mortgage interest payments while the CPI doesn't.

Seasonally adjusted: Estimates in which the element of variability due to seasonal influences, which may distort the data, has been removed.

Sterling Exchange Rate Index (SERI): This measures the value of sterling against a trade-weighted 'basket' of other currencies. The weights used in this index measure currencies' relative importance to UK trade in goods and services.

UK Base/Repo rate: The rate at which the Bank of England lends to discount houses by buying their bills. The base rate is usually the minimum rate at which banks are prepared to lend money. The high street bank base rate follows that set by the Bank of England, and it acts as the benchmark for other interest rates, including mortgages and personal loans.

Unemployment: The ILO definition includes all people who are: out of work, want a job, have actively sought work in the previous four weeks and are available to start work within the next fortnight; or are out of work and have accepted a job that they are waiting to start in the next fortnight.

Unemployment rate: The number of unemployed persons expressed as a percentage of the total economically active population.

Volume/value of retail sales: The volume of retail sales is the total takings adjusted for inflation and the value of retail sales is the total actual takings.

Workforce jobs: The sum of employee jobs, self-employment jobs, those in HM Forces and government-supported trainees.

The House of Commons Library research service provides MPs and their staff with the impartial briefing and evidence base they need to do their work in scrutinising Government, proposing legislation, and supporting constituents.

As well as providing MPs with a confidential service we publish open briefing papers, which are available on the Parliament website.

Every effort is made to ensure that the information contained in these publically available research briefings is correct at the time of publication. Readers should be aware however that briefings are not necessarily updated or otherwise amended to reflect subsequent changes.

If you have any comments on our briefings please email papers@parliament.uk. Authors are available to discuss the content of this briefing only with Members and their staff.

If you have any general questions about the work of the House of Commons you can email hcinfo@parliament.uk.

Disclaimer - This information is provided to Members of Parliament in support of their parliamentary duties. It is a general briefing only and should not be relied on as a substitute for specific advice. The House of Commons or the author(s) shall not be liable for any errors or omissions, or for any loss or damage of any kind arising from its use, and may remove, vary or amend any information at any time without prior notice.

The House of Commons accepts no responsibility for any references or links to, or the content of, information maintained by third parties. This information is provided subject to the [conditions of the Open Parliament Licence](#).
