2. This month's developments

July 2016 saw the publication of a range of economic data covering the period immediately prior to the EU referendum, and some early indicators of the economic situation following the referendum result.

GDP growth stronger than anticipated in Q2 2016

[GDP growth in Q2 2016](#) (the three months to June 2016) was higher than anticipated at 0.6%, and above growth seen in Q1 2016. Early estimates show:

- Strong growth in the manufacturing sector, of 1.8%
- Growth in the services sector, of 0.5%
- A contraction in the construction sector of -0.4%, following a contraction of -0.3% in Q1 2016

Labour market continues to perform well

[Data released in July](#) show that in March to May 2016, the unemployment rate fell to 4.9%, its lowest level since the three months to October 2005. Employment continued to rise, reaching 31.7 million. The employment rate for 16-64 year olds was 74.4%, a record high.

GDP forecasts for 2016 and 2017

The [Treasury's survey of independent forecasts](#) of GDP growth in 2016 was slightly reduced in July compared with June (from 1.8% to 1.6%). However, **forecast growth for 2017 was markedly lower**. In June the average forecast of GDP growth in 2017 was 2.1%. In July it was 0.8%.

Economic sentiment in July 2016

July saw the publication of the [composite UK Purchasing Manager's Index](#) (a survey of economic confidence in manufacturing and services businesses). In July 2016, this index contracted by more than at any time since 2009.

Bank of England analysis

The [Bank of England's Agents' survey](#) of business conditions published in July, found that although uncertainty had risen since the referendum, businesses were still adopting a **"business as usual"** approach, and the majority did not expect to reduce investment or hiring plans in the near-term.

However, the deterioration of wider economic forecasts and sentiment indicators has persuaded [many commentators](#) that the Bank's Monetary Policy Committee will cut interest rates during August, possibly at their meeting on Thursday 4th.

New Chancellor's initial comments

Phillip Hammond was appointed Chancellor of the Exchequer on the 13th July. [He has stated that](#) the Government might "reset" its fiscal policy if economic data worsens over the summer. This follows George Osborne's [announcement](#) shortly after the referendum that the target of a budget surplus by 2020 had been scrapped.

3. Introduction to Economic Indicators

Economic Indicators is published on the first Tuesday of the month. Individual indicator pages are updated more frequently as new data becomes available and are published on the Library's webpages.

Feedback

If you have any comments or suggestions about Economic Indicators please contact the editor, Chris Rhodes on x2454.

Weekly email alert

A weekly email alert with updated indicators is available to Members and their staff on request. To subscribe, please visit the [Economic Indicators](#) web pages.

Regional Economic Indicators

A separate briefing, Regional and National Economic Indicators, is available containing key economic data on the regions and countries of the UK, compared to the national UK average.

Sources and glossary

A guide to sources is provided in Section 5. Economic terms, symbols and abbreviations used in the publication are provided in Section 6.

Contacts

Members and their staff are encouraged to talk to Library subject specialists. A comprehensive guide is available in Using the Library. Researchers are not able to discuss pages with members of the public. For enquiries please contact the following specialists:

A1: Gross Domestic Product

Preliminary estimates indicate GDP grew by 0.6% in Q2 2016. This is above growth in Q1 2016 of 0.4%.

Real Gross Domestic Product seasonally adjusted

	% change on qtr	% change on yr
2012	...	1.3
2013	...	1.9
2014	...	3.1
2015	...	2.2
2015 Q2	0.4	2.3
Q3	0.4	2.0
Q4	0.7	1.8
2016 Q1	0.4	2.0
Q2	0.6	2.2

GDP was 2.2% in Q2 2016 than a year before.

GDP has now increased for 14 consecutive quarters and is estimated to be 7.7% above the pre-economic downturn peak in Q1 2008.

GDP in cash terms was £1,870 billion in 2015.

% change on previous qtr

Forecasts

In July 2016, the Treasury survey of independent forecasts for GDP growth showed an average forecast of 1.6% for 2016 and 0.8% for 2017. Most of these forecasts in the survey were made after the referendum on the UK's membership of the European Union. The average forecast for 2017 is markedly lower than in last month's survey, which forecast 2.1% growth in 2017.

The latest Office for Budget Responsibility (OBR) forecasts, published alongside the March 2016 Budget, are for growth of 2.0% in 2016 and 2.2% in 2017. These forecasts were made before the referendum on the UK's membership of the European Union and subsequent economic developments.

Quarter-on-quarter growth rates

Forecasts

On 19 July, the IMF lowered its 2016 GDP growth forecast for the UK from 1.9% (at the time of the last forecast in April) to 1.7% and from 2.2% to 1.3% for 2017. The IMF cited uncertainty following the UK's decision to leave the EU as the reason for its downgrade.

A3: Components of GDP

GDP can be analysed in terms of the output produced by different industries of the economy and by expenditure on goods and services made by households, businesses and the government.

Overall, GDP increased by 0.6% in real terms in Q2 2016 compared with the previous quarter. These figures are from before the Brexit vote.

GDP by Industry

In 2014, the service sector accounted for around 78% of economic output, the production sector for 15% and the construction sector for 6%.

Service sector
quarterly growth (%)

In Q2 2016, service sector output increased by 0.5% in real terms compared with Q1 2016.

Manufacturing output was up by 1.8% (and overall the production sector increased by 2.1%). Output in the construction sector decreased by 0.4%.

GDP by Expenditure

Household consumption is the largest element of expenditure, accounting for 62% of the total in 2015. Government consumption accounted for 19% and investment for 17%.

Household Consumption
quarterly growth (%)

In Q1 2016, household consumption grew by 0.7% in real terms compared with Q4 2015. Government consumption was up 0.5% and investment was down 0.1%.

Exports fell by 0.4% while imports increased by 0.1%.

GDP by expenditure
% change on previous quarter (real terms)

	Household consumption	Government consumption	Investment	Exports	Imports	GDP

ONS, [Quarterly National Accounts](#), 30 Sept 2016

ONS, [Gross Domestic Product: Preliminary Estimate](#), 27 Oct 2016

A4: Productivity

One of the most important factors in determining living standards is productivity – how much output is produced for a given input (such as an hour of work).

The more efficient the economy is, the more that can be produced in a sustainable fashion. In other words, higher productivity growth leads to a higher long-term growth rate of the economy.

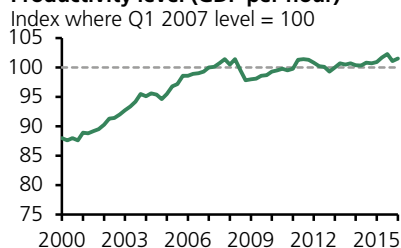

Economic theory states that labour productivity also determines wages: the more productive an employee is, the more they are likely to be paid.

UK productivity

The average increase historically in the UK has been about 2% but in the eight years since the recession began, productivity has stagnated. The Office for National Statistics in March 2015 [said](#) this is “unprecedented in the post-war period”.

Productivity across the whole UK economy, measured by output per hour, is estimated to have increased by 0.9% in 2015, the most since 2011, though still below historical trends. After improving in the first three-quarters of the year, productivity fell in Q4 2015 by 1.2% compared with the previous quarter (due to more hours being worked). In Q1 2016, productivity increased by 0.5% on a quarterly basis. Compared with a year ago, productivity was up 0.4%.

Productivity level (GDP per hour)

Productivity - output (GDP) per hour

	% change on qtr	% change on yr
2014	..	0.1
2015	..	0.9
2015 Q2	0.5	1.4
Q3	0.3	1.0
Q4	-0.9	-0.3
2016 Q1	0.5	0.4

International comparisons

International comparisons of productivity levels are presented in the chart below as an index where the UK=100.

Productivity (GDP per hour), 2014

Index where UK=100

In 2014, based on GDP per hour, the UK came sixth highest out of the G7 countries, with Germany top and Japan bottom. UK productivity was 18 percentage points below the average of the rest of the G7 countries, the widest productivity gap since at least 1991 (when the ONS data series began).

A5: Services

The service industries include the retail sector, the financial sector, the public sector, business administration and cultural activities.

In 2014, the service industries accounted for 80% of total UK economic output (Gross Value Added) and accounted for 83% of jobs in March 2016.

Services Output

Output - Index of Services
% change on previous year

Output decreased by 0.1% in May compared to April.

Compared with a year before, it has increased by 2.7%.

Purchasing Managers' Index (PMI)

UK Services PMI
50 = no change

The Markit/CIPS UK Services PMI is important indicator of output and confidence in the sector.

In June it was 52.3 (where a figure above 50 indicates that output is increasing). This is down 1.2 on May, and matches April's 38 month low.

A6: Manufacturing

Manufacturing is one of the production industries, which also include mining, electricity, water & waste management and oil & gas extraction.

In 2014, the manufacturing sector accounted for 11% of total UK economic output (Gross Value Added). In March 2016, it accounted for 8% of jobs.

Manufacturing Output

Output - Index of manufacturing

% change on previous year

Total output was down in May 2016 compared with April, by 0.5%.

Manufacturing output rose over the year to May 2016 by 1.7%.

Purchasing Managers' Index (PMI)

Update

ONS, [Index of Production](#), 9 August 2016

Markit/CIPS, [UK Manufacturing PMI](#), 1 September 2016

B1: Inflation

The Consumer Prices Index (CPI) is the main measure of inflation. It is produced in line with international standards and is the measure used for the Bank of England’s 2% inflation target. The Retail Prices Index (RPI) is no longer classified as a National Statistic as the way it is calculated does not meet international standards. It is included here as it is well-known and is the longest running measure of inflation.

Consumer Prices Index (CPI)
% change on yr

The CPI inflation rate was 0.5% in June, compared to 0.3% in May. The RPI inflation rate rose by 0.2% points to 1.6%.

The main contribution to the increase came through rises in air fares, motor fuels and recreational and

cultural goods and services. The upwards pressures were partially offset by a fall in the price of furniture and furnishings and accommodation services.

Retail Prices Index (RPI)
% change on yr

Price Indices

Update

ONS, [Consumer Price Indices](#), 16 Aug 2016

B2: International inflation

Inflation in the EU, some other European countries, and the US can be compared using the standard Harmonised Index of Consumer Prices (HICP), or the CPI as it is known in the UK.

UK inflation was 0.5% in the year to June 2016, up from 0.3% in May.

The preliminary estimate for July indicates that annual inflation in the Eurozone was 0.2%, up 0.1 percentage points on the previous month. In June, inflation in Germany was 0.2%. It was 0.3% in France. Inflation was negative in a number of large EU economies in June, including Italy, Spain and Poland.

Belgium had the highest annual inflation rate in the EU in June at 1.8%, followed by Sweden at 1.2%. The lowest annual inflation rate in the EU was Cyprus (-2.0%) then Bulgaria (-1.9%). 13 of the 28 EU member states had negative inflation in June.

HICP inflation in the US in the year to May was 0.3%, compared with 0.5% in April.

Inflation rates: selected countries

B3: Average Earnings

In April 2015 median gross weekly earnings for full-time employees were £528, up 1.8% on April 2014.

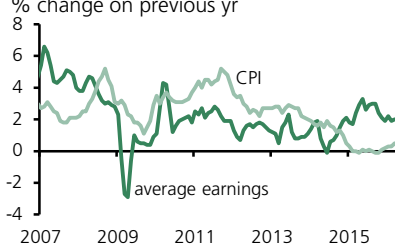

More timely but less detailed data show average weekly earnings for the whole economy, including bonuses, were 2.3% higher in the three months to May 2016 compared with the year before. Excluding bonuses, average weekly earnings increased by 2.2%. Inflation as measured by the CPI averaged 0.4% over the same period.

Average Earnings, Whole Economy

Real average weekly earnings

Inflation and earnings (incl bonuses)

Trends by Sector

Annual % change in average earnings (including bonuses), Great Britain

	Total	Private	Public
2014 May	0.3	0.2	0.1
2015 May	3.3	4.0	0.9
2016 Mar	2.0	2.2	1.6
Apr	2.0	2.1	1.7
May	2.3	2.5	1.7

Note: Data show annual % change in earnings to three month period ending in given month; data are seasonally adjusted

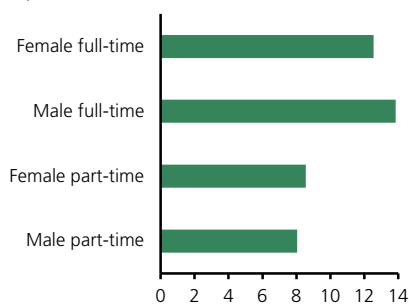

Source: ONS, Average Weekly Earnings series

Average total weekly pay (including bonuses) grew by 2.5% in the **private sector** in the three months to May 2016, compared with the year before. In the **public sector**, total pay increased by 1.7%.

Sectors seeing larger increases in average earnings over the year to May 2016 included **construction** (up 8.3%).

Pay Levels

Median hourly pay excluding overtime April 2015 (£)

Median weekly earnings for full-time employees in the UK were £528 in April 2015. (The median is the point at which half earn more and half earn less).

Median hourly earnings (excluding overtime) were £13.29 for full-time employees; £13.84 for men working full-time and £12.54 for women.

Median hourly earnings (excluding overtime) were £8.44 for part-time employees; £8.04 for men working part-time, and £8.56 for women. Women are more likely than men to work part-time.

ONS, [Labour Market Statistics](#), 20 July 2016

C2: Unemployment

The International Labour Organisation (ILO) definition of unemployment is the headline measure of unemployment in the UK. The number of people out of work claiming Universal Credit (UC) and Jobseeker's Allowance (JSA) and predecessor unemployment benefits is also used.

Unemployment; UK
000s, age 16+, seasonally adjusted

Unemployment Rate; UK
%, age 16+, seasonally adjusted

ILO unemployment was 1.65 million people in the UK in March-May 2016, down 54,000 on the previous quarter and down 201,000 from the previous year.

The unemployment rate was 4.9% (the percentage of the economically active population who are unemployed), roughly unchanged on the previous quarter but down from 5.6% in the same period in 2015.

The number of people claiming JSA (adjusting for Universal Credit) increased by 400 between May and June 2016 to 759,100 people

aged 18 or over.

There were 903,000 men unemployed in March-May 2016, down 25,000 on the previous quarter. 742,000 women were unemployed, down 29,000 on the previous quarter.

C3: Unemployment International

The OECD produces harmonised unemployment rates for OECD members based on the ILO definition of unemployment.

Harmonised Unemployment Rate (%)

The UK harmonised unemployment rate for Q1 2016 was 5.0%. This was below the rate of France and Ireland but above that of Germany.

In the US, the unemployment rate stood at 4.9% in Q2 2016, unchanged from Q1 2016.

In the G7, the unemployment rate was 5.6% in Q1 2016, unchanged from Q4 2015.

Greece had the highest harmonised unemployment rate out of the OECD member states for Q1 2016 (24.2%).

Japan, Korea and Iceland had the lowest unemployment rate in the OECD for Q1 2016 at 3.2%, 3.8% and 3.3% respectively.

Youth (15-24) unemployment is a major issue in many developed economies at present. In Q1 2016 youth unemployment was 45.7% in Spain and 49.9% in Greece. In the same period UK youth unemployment stood at 13.3%.

Next Update

OECD, [Harmonised Unemployment Rates](#),
12 September 2016

D1: Interest Rates and Monetary Policy

The Bank of England has left the Base Rate in the UK unchanged at 0.5% since March 2009 – the lowest since the Bank was founded in 1694.

The Governing Council of the European Central Bank (ECB) lowered the main interest rate for the Eurozone to 0.00% and the deposit rate to -0.40% in March 2016.

The US Federal Reserve increased its target range for the federal funds rate to

between 0.25-0.5% on 16 December 2015. This is the first increase since 2006. The Fed had previously signalled they would raise rates by the end of 2015.

Quantitative Easing

With little room for further cuts in interest rates, the Bank of England initiated an asset purchase or quantitative easing (QE) programme in March 2009.

From an initial £75bn in March 2009, QE was increased by £125bn (to a total of £200bn) by November 2009. It was further increased as follows: up by £75bn (to £275bn) in October 2011; £50bn (to £325bn) in February 2012 and £50bn in July 2012 to a total of £375bn.

The majority (over 99%) of assets purchased by the Bank of England through QE have been gilts (UK government debt).

On 21 April 2016 the ECB expanded the QE programme established in January. It will now buy €80bn assets (mostly government bonds of Eurozone countries) (up from €60bn in January) each month until at least September 2016. The ECB has implemented this programme to raise the rate of inflation to its 2% target (inflation was -0.2% in Dec 2014).

The Federal Reserve in the US, has run three programmes of QE since the Great Recession. The first from December 2008 to March 2010 saw the Fed buy \$1.75 trillion of mortgage-backed securities and government debt between December 2008 and March 2010. The second programme involved the Fed buying about \$600bn in new assets between November 2010 and June 2011. The third programme, so-called QE3, ran from September 2012 to October 2014 and saw the Fed purchasing assets (mortgage debt and government debt) of around \$1.6 trillion.

Sources: ONS, OBR. Excludes public sector banks

In the first quarter of 2016/17 public sector net borrowing decreased by £2.3 billion compared with the same period in 2015/16. This is a decrease of around 8%.

The outturn data shown here – data up to and including 2015/16 – reflect the latest position as at 30 June 2016. According to the Office for National Statistics (ONS) the figures do not reflect any

significant impact of the EU Referendum result. Estimates for the latest period contain a substantial element of forecast information which currently reflect pre-referendum assumptions.

All forecasts – data from 2016/17 – were made by the Office for Budget Responsibility (OBR) in March 2016, before the EU referendum result was known. A new set of forecasts are expected alongside the 2016 Autumn Statement.

Public sector net borrowing

% of GDP

Public sector net debt

% of GDP

The ONS's figures for 2015/16 are provisional: they are not final figures and may be revised over the coming months as provisional data are replaced with finalised and audited data.

Net borrowing – often described as the deficit – is the difference between what the government spends and what it receives in taxes over a particular time period.

Net debt is the total amount that the public sector owes – it is largely the stock of past borrowing.

D3: Financial Indicators

FTSE-100 Index
Daily closing price

FTSE-100 Index

The FTSE-100 tracks the share-prices of the 100 largest companies listed on the London Stock Exchange. It hit an all-time high of 7,103 in May 2015, passing the previous record high of 6,930 set in December 1999. Despite turbulence following the EU Referendum result, on the 28

July market close the FTSE 100 was up 9% on the month.

Brent Crude Oil

The price of Brent crude oil reached an all-time high above \$145/barrel in July 2008. In January 2016, the price fell below \$30/barrel for the first time since February 2004, though has since returned to above \$40/barrel and despite a small fall over the last month, has climbed steadily since the beginning of 2016.

E2: Exchange Rates

The Sterling Exchange Rate Index (SERI) measures sterling's value against a 'basket' of currencies, 'trade-weighted' (based on currencies' relative importance in UK trade).

The SERI fell by 6.6% in July 2016 compared with June. Compared with the same period a year ago, it is 15.0% lower. It is currently 2.3% above its March 2009 level, when it was at its lowest point since the series began in 1980. It is 24.6% below its peak in July 2007.

Sterling Exchange Rate Index (SERI)

Jan 2005=100

On average in July compared with June, the pound was down 15.5% against the dollar. At the 1 August market close, the pound stood at \$1.32. On 6 July, the pound fell to \$1.28, its lowest level against the dollar since 1985.

Sterling was down 15.9% against the Euro on average in July compared to June. At the 1 August market close the pound stood at €1.18. This compares with an all-time low of €1.02 (on 30 December 2008), and a launch rate of €1.48 on 31 December 1998.

F1: Business and Consumer Confidence

Confidence surveys, with information generally released ahead of official statistical data, can indicate changes to the economic outlook as well as turning points in the economic cycle.

European Commission Economic Sentiment Indicator

The European Commission conducts regular harmonised surveys for different sectors of EU member states' economies.

Between June and July 2016 the overall UK sentiment index fell by 4.4 points to 102.6, 9.9 points lower than a year earlier. The

Eurozone index was up 0.6 points over the year to 104.6.

These changes followed the Brexit vote on 23 June.

CBI Industrial Trends Survey

The CBI carries out monthly and quarterly Industrial Trends surveys.

In July 2016, more manufacturers thought that output would rise over the next three months than thought it would fall. The difference was +6, down sharply on June's figure of +23, following the vote for Brexit.

GfK NOP Consumer Confidence Survey

GfK NOP's Consumer Confidence Index measures a range of consumer attitudes, including forward expectations of the general economic situation and households' financial positions, and views on making major household purchases.

In mid July, overall consumer confidence index was -12, down from -9 in a special survey run after the Brexit vote, and from -1 towards the beginning of June 2016.

F3: Housing Market

On a seasonally adjusted basis, **house prices** on the UK House Price Index increased by 0.7% between April 2016 and May 2016. Prices were 8.1% higher in May 2016 compared with a year ago. These data are from the second release of the new [UK House Price Index](#).

Mortgage approvals in June 2016 were down 2.9% on the previous month and 4.6% down on a year ago. Approvals remain well down on pre-recession levels.

Housing starts decreased by 3% in Q1 2016 compared to Q4 2015. Housing starts and completions have increased from the lows observed in late 2008 and early 2009 but remain below pre-recession levels.

On a seasonally adjusted basis, average house prices in the UK increased by 0.7% between April 2016 and May 2016.

There are regional differences in house prices. The average price is highest in London at roughly £470,000. The lowest prices are found in Northern Ireland and the North East at £118,000 and £124,000 respectively.

Bank of England data on the number of mortgages approved to finance house purchases are a leading indicator of house sales.

There were 64,766 mortgage approvals in June 2016, down 2.9% on the previous month and 4.6% compared to June 2015.

There were 35,530 seasonally adjusted house building starts in England in Q1 2016, a 3% decrease on the previous quarter, and 9% down on the same quarter of 2015. This is above the recent low of 17,150 in Q1 2009, but still below the 48,970 starts in Q1 2007.

There were 32,950 seasonally adjusted dwelling completions in Q4 2015, down 9% on the previous quarter, and 3% lower than during the same quarter of 2015. Completions remain below the peak of 48,440 completions in Q1 2007.

F4: Household Debt

Household debt as a % of disposable income

Household debt peaked at 169% of household gross disposable income in Q1 2008.

Household debt: % of disposable income

In Q4 2015, it was 143%. It has been at roughly this level since the end of 2012.

Current average mortgage interest rates

The average Standard Variable Rate (SVR) has risen slightly over the past year – in June 2016 it was 4.56%, compared with 4.49% a year before.

Current average mortgage interest rates

The average 2-year fixed mortgage rate fell considerably between 2012 and mid-2015, but has been steady since then. In June 2016 it was 1.74% compared with 1.83% a year before.

Individual insolvencies, England and Wales

There were 22,503 individual insolvencies in England and Wales in Q2 2016, 22.4% higher than a year earlier (seasonally adjusted figures). This represents the highest number of insolvencies since Q4 2014.

Individual insolvencies; England and Wales, Thousands

In Scotland, there were 2,405 individual insolvencies in Q2 2016, an increase of 49.8% on a year earlier. In Northern Ireland, there were 755 individual insolvencies in Q2 2016, an increase of 8.5% on a year earlier.

4.1 Definitions¹

Balance of payments: A country's financial position, with other countries of the world, comprising two parts:

Current account: the balance of imports and exports of goods and services, income and transfers combined;

Capital account: the difference between a country's capital invested in other countries, and the capital invested by other countries in it. Technically, the two parts always balance. A balance of payments deficit normally refers to a current account deficit.

Balance of trade: The difference between a country's exports and imports of either goods only or goods and services combined. Trade in financial services account for around a third of UK exports, and thus partially offsets trade in goods deficits.

Basic prices: Prices excluding taxes and subsidies on products.

Claimant count: The number of people aged 18 and over claiming Jobseeker's Allowance (JSA) benefits. This includes out-of-work Universal Credit claimants.

Consumer Prices Index (CPI): This is the headline UK domestic measure of inflation. It measures the average change from month to month in the prices of consumer goods and services purchased in the UK.

Current account balance: The difference between receipts/payments due to transactions in goods, services, income and transfers between the UK and all other countries. A current account deficit means that total payments exceed total receipts; in the reverse case, the current account is in surplus.

Current budget: Measures the balance of public sector current account revenue over public sector current expenditure.

Current/constant prices: Current prices are the actual or estimated recorded monetary value over a defined period for a group of industries or products. They show the value for each item expressed in terms of the prices of that period.

Constant prices refer to volume measures whose values are derived by applying to current quantities, prices for a specific base period. They allow figures to be represented so that the effects of inflation are removed. The values for each time period are expressed in terms of the prices in a particular base period.

Economically active: Those aged 16 and over who are either in employment or unemployed.

Economically inactive: Those aged 16 and over who are neither in employment nor unemployed. This includes those who do not want a job, those who want a job but have not been seeking work in the last four weeks and those who want a job and are seeking work but not available to start work.

¹ Sources: ONS, HM Treasury, HM Revenue and Customs, Finance-Glossary.com.

Employment: The number of people with jobs as estimated by the Labour Force Survey (LFS). This includes all people aged 16 or over who did paid work, those who had a job that they were temporarily away from, those on government supported training and employment programmes, and those doing unpaid family work during the survey period. The employment rate refers to the number of people employed as a percentage of the working age population as measured by the LFS.

Exchange rate: The rate at which one currency is traded against another.

Gross Domestic Product (GDP): The total market value of goods and services produced after deducting the cost of goods and services used up in the process of production (intermediate consumption) but before deducting consumption of fixed capital (depreciation).

Gross Domestic Product – Real GDP: Also known as constant price or chained volume measure, this is a measure used to indicate change in the actual quantity of goods and services produced, by adjusting for inflation.

Gross Fixed Capital Formation (GFCF): Expenditure on fixed assets (buildings, vehicles etc.) either for replacing or adding to the stock of existing assets. Business investment is GFCF by the private sector and public corporations on transport equipment, other machinery and equipment and new dwellings and structures other than dwellings.

Gross Value Added (GVA): The difference between output and intermediate consumption for any given sector/industry. That is the difference between the value of goods and services produced and the cost of raw materials and other inputs which are used up in production. GVA is used to measure the productivity of sectors/industries and economies.

Harmonised Indices of Consumer Prices (HICP): Harmonised indices of consumer prices for Member States of the European Union, which enable comparisons to be made across countries. The UK's CPI measure uses HICP methodology.

Market prices: The prices actually paid by the purchaser for goods and services, including transport costs, trade margins and taxes. $\text{GDP at market prices} = \text{GDP at basic prices} + \text{transport prices paid separately} + \text{non-deductible taxes on expenditure} - \text{subsidies received}$.

Money supply: The total amount of money in an economy at a given time.

The Public Sector Net Borrowing (PSNB): This measures the public sector's accumulation of debt net of liquid financial assets. Its approximate stock equivalent is net public sector debt.

Public Sector Net Debt: This is approximately the stock analogue of the PSNB. It measures the public sector's financial liabilities to the private sector and abroad, net of short-term financial assets such as bank deposits and foreign exchange reserves.

Retail Prices Index (RPI): A domestic indicator of inflation. It measures the average change from month to month in the prices of goods and services purchased in the UK. It is similar to the CPI, but differs in terms of methodology and coverage. For example, the RPI includes housing costs such as mortgage interest payments while the CPI doesn't.

Seasonally adjusted: Estimates in which the element of variability due to seasonal influences, which may distort the data, has been removed.

Sterling Exchange Rate Index (SERI): This measures the value of sterling against a trade-weighted 'basket' of other currencies. The weights used in this index measure currencies' relative importance to UK trade in goods and services.

UK Base/Repo rate: The rate at which the Bank of England lends to discount houses by buying their bills. The base rate is usually the minimum rate at which banks are prepared to lend money. The high street bank base rate follows that set by the Bank of England, and it acts as the benchmark for other interest rates, including mortgages and personal loans.

Unemployment: The ILO definition includes all people who are: out of work, want a job, have actively sought work in the previous four weeks and are available to start work within the next fortnight; or are out of work and have accepted a job that they are waiting to start in the next fortnight.

Unemployment rate: The number of unemployed persons expressed as a percentage of the total economically active population.

Volume/value of retail sales: The volume of retail sales is the total takings adjusted for inflation and the value of retail sales is the total actual takings.

Workforce jobs: The sum of employee jobs, self-employment jobs, those in HM Forces and government-supported trainees.

The House of Commons Library research service provides MPs and their staff with the impartial briefing and evidence base they need to do their work in scrutinising Government, proposing legislation, and supporting constituents.

As well as providing MPs with a confidential service we publish open briefing papers, which are available on the Parliament website.

Every effort is made to ensure that the information contained in these publically available research briefings is correct at the time of publication. Readers should be aware however that briefings are not necessarily updated or otherwise amended to reflect subsequent changes.

If you have any comments on our briefings please email papers@parliament.uk. Authors are available to discuss the content of this briefing only with Members and their staff.

If you have any general questions about the work of the House of Commons you can email hcinfo@parliament.uk.

Disclaimer - This information is provided to Members of Parliament in support of their parliamentary duties. It is a general briefing only and should not be relied on as a substitute for specific advice. The House of Commons or the author(s) shall not be liable for any errors or omissions, or for any loss or damage of any kind arising from its use, and may remove, vary or amend any information at any time without prior notice.

The House of Commons accepts no responsibility for any references or links to, or the content of, information maintained by third parties. This information is provided subject to the [conditions of the Open Parliament Licence](#).
