

RESEARCH PAPER 01/65
18 JULY 2001

Unemployment by Constituency, June 2001

This paper shows the number of unemployed claimants recorded as resident in each constituency in the United Kingdom in June 2001, together with comparisons with the levels in June 2000 and June 1997. This paper also presents residence-based unemployment rates not published elsewhere for all 659 constituencies in the United Kingdom.

Library Research Papers are compiled for the benefit of Members of Parliament and their personal staff. Authors are available to discuss the contents of these papers with Members and their staff but cannot advise members of the general public. Any comments on Research papers should be sent to the Research Publications Officer, Room 407, 1 Derby Gate, London, SW1A 2DG or e-mailed to PAPERS@parliament.uk.

Summary of main points

This research paper summarises data for UK parliamentary constituencies from the monthly count of unemployed claimants. It includes residence-based unemployment rates, and changes in the number of claimants compared with one and four years earlier. From February 2000, these rates are based on the estimated economically active population in each constituency in 1997. Please see Research Paper 00/29, *Unemployment by constituency: Revised rates*, for details.

The unemployment rates given here differ from those published by National Statistics (NS), which express the number of unemployed claimants as a percentage of the number of jobs plus the number of unemployed people in the constituency. As the NS rates can be biased by large-scale net commuting, the Library believes that its residence-based unemployment rates provide a better measure of local deprivation.

Also shown in the paper are comparisons between the current level of unemployment in each constituency with that one year and four years earlier. Data for the current constituencies are not available before January 1996.

The political parties shown against each seat are as they stand currently.

I Introduction

The unemployment rates in this Research Paper use figures for the number of unemployed claimants from the monthly count and estimates of the number of people who were economically active in 1997.¹ The national and regional headline unemployment rates are now based on the International Labour Organisation (ILO) definition of unemployment. Figures for constituencies are not, however, available on this basis.

These residence-based rates should be regarded more as a social measure of relative deprivation than as an economic measure of the mismatch between the supply of and demand for labour, as they take no account of people's ability to seek work outside the constituency in which they live. For a full exposition of the methodology used to calculate these rates see Research Paper 96/63, *New Unemployment Rates for Parliamentary Constituencies*.

Until June 1999, NS did not publish unemployment rates for parliamentary constituencies since most do not approximate to self-contained labour markets.² Following local government reorganisation, NS decided to publish unemployment rates for all unitary authorities, even though some of these do not meet the normal self-containment criteria. From 16 June 1999, they have published official unemployment rates for all constituencies.

The difference between the two sets of unemployment rates lies in the denominator used. The House of Commons Library rates express the number of claimants resident in each constituency as a percentage of the estimated economically active population resident in each constituency in 1997. In contrast, the NS unemployment rates express the number of claimants resident in a constituency as a percentage of the 1999 workforce (the workforce is comprised of the number of jobs in the constituency, regardless of whether the jobholders are resident or not, plus the resident unemployed claimants).³

In May 1999, of the 659 constituencies in the United Kingdom, 148 (22%) had unemployment rates which varied by more than two percentage points on the two bases. For example, in the Birmingham Ladywood constituency, the Library residence-based unemployment rate for May 1999 was 17.7% but the official workforce rate was just 3.7%. The main factor that will affect the difference between the two denominators is the extent of commuting into and out of the constituency: this will determine whether the workforce is significantly different in size from the resident economically active population. In addition, differences may arise due to differences in the definition of economic activity used (eg the NS workforce measure counts people with two jobs twice) and in the year to which the figures relate.

¹ Details are given in *Unemployment by constituency: Revised rates*, Research Paper 00/29.

² Self contained labour markets are areas where the 70 per cent of the people who live in the area also work there, and 70 per cent of those who work in the area also live there.

³ Under the definitions used for calculating the workforce, a person who has two part-time jobs counts twice.

The following table explains how differences in the denominators used will affect the calculation of the two unemployment rates.

| Factor affecting denominator | Effect on unemployment rate |
|--|--|
| constituency has significant level of net inward commuting (i.e. more people commute into the constituency than commute out) | NS unemployment rate will be lower than residence-based unemployment rate |
| constituency has significant level of net outward commuting (i.e. more people commute out of the constituency than commute in) | NS unemployment rate will be higher than residence-based unemployment rate |

The two sets of unemployment rates have different interpretations. If one is mainly interested in measures of relative local economic deprivation, then the Library's residence-based measure is more appropriate. If, however, one is more interested in the state of the local labour market then the NS measure is better.

Notes to tables:

1. The Boundary Commission reviews in 1995 defined 659 constituencies in the United Kingdom. These were defined in terms of electoral wards as they stood at the time of the review. For the purposes of the unemployment statistics however, constituencies represent a best-fit of frozen 1991 wards to the new constituencies.

Boundary alterations between 1991 and 1995 mean that there are inevitably approximations to 1995 boundaries in many constituencies. In some cases, however, the changes to ward boundaries were substantial and some wards are now split between constituencies. These constituencies are indicated with an asterisk (*) in the following tables.

Four wards with populations below the 1991 Census confidentiality threshold have had their data 'exported' to a ward which is in another constituency. In these cases, the data for the 'exported' ward are included in the constituency to which the ward has been transferred. Constituencies losing data in this way are indicated by '>', whereas those gaining data as a result are indicated by '<'.⁴

2. The following abbreviations for parties have been used:

| | | | |
|------|-------------------------|------|------------------------------------|
| LAB | Labour | UU | Ulster Unionist Party |
| CON | Conservative | DU | Democratic Unionist Party |
| LD | Liberal Democrat | SDLP | Social Democratic and Labour Party |
| PC | Plaid Cymru | SF | Sinn Fein |
| SNP | Scottish National Party | IND | Independent |
| SPKR | Speaker | | |

⁴ Data are transferred from Bath to Wansdyke (one ward), Hereford to Leominster (one ward) and Clywd South to Clwyd West (two wards).
