

Unemployment by Constituency, August 2009

RESEARCH PAPER 09/72 16 September 2009

This paper shows the number of people claiming Jobseeker's Allowance recorded as resident in each constituency in the United Kingdom in August 2009, together with comparisons with the levels in August 2008 and August 1997. Residence-based unemployment rates are given for all 646 constituencies in the United Kingdom. A summary of the latest labour market data is given, along with a selection of other relevant constituency-level indicators.

The paper includes unemployment rates by constituency maps and an annual percentage change map.

It should not be relied upon as being up to date; the law or policies may have changed since it was last updated; and it should not be relied upon as legal or professional advice or as a substitute for it. A suitably qualified professional should be consulted if specific advice or information is required.

This information is provided subject to [our general terms and conditions](#) which are available online or may be provided on request in hard copy. Authors are available to discuss the content of this briefing with Members and their staff, but not with the general public.

We welcome comments on our papers; these should be e-mailed to papers@parliament.uk.

Summary of main points

This Research Paper summarises data for UK parliamentary constituencies from the monthly count of Jobseeker's Allowance (JSA) claimants. It includes rates showing the number of JSA claimants as a proportion of the estimated economically active population of working age in each constituency in 2006 (see the appendix for details). It also includes changes in the number of JSA claimants compared with one year earlier and with 1997.

Data for the current constituencies are not available before January 1996.

The political parties shown against each seat are as they stand currently.

Section III of the paper provides a selection of other labour market data at a constituency level, including estimates of ILO unemployment (experimental), the employment rate, vacancies notified to Jobcentre Plus and a breakdown of JSA claimants by age.

I Monthly Labour Market Statistics

Statistics on JSA claimants are one part of a large selection of labour market data released on a monthly basis.¹ This page highlights some of the key figures in the latest labour market release, as well as data of relevance to constituencies.

- Claimant count unemployment rose by 24,400 in August 2009 to 1.61 million.² This was the highest level since May 1997.
- The wider ILO based measure of unemployment was 2.47 million in the period May-July 2009, a rise of 743,000 compared to the same period a year ago and 387,000 higher than in the same period in 1997. It is the highest unemployment level since 1995.
- The number of people who have been unemployed (ILO measure) for longer than six months increased by 144,000 over the last quarter to 1.04 million in the period May-July 2009. This was 344,000 higher than in the same quarter a year ago.
- On a regional basis the highest rates of unemployment (ILO measure) are in the West Midlands (10.5%), North East (9.4%) and London (9.2%) (May-July 2009). Over the last year the ILO unemployment rate has increased across the UK by 2.3 percentage points. The greatest rises have been in the West Midlands (4.2 percentage points), Scotland (2.8 percentage points) and South West and Yorkshire and the Humber (both 2.7 percentage points).
- The number of people in employment has fallen by 217,000 over the last quarter to 28.89 million (May-July 2009); full-time employment fell by 297,000 while part-time employment rose by 80,000. Compared to same quarter one year ago overall employment fell by 600,000, full-time employment fell by 691,000 over the year while part-time employment rose by 91,000.
- Employment in the public sector rose by 13,000 over the last quarter to 6.04 million (May-July 2009), while employment in the private sector fell by 230,000 to 22.85 million.
- In May-July 2009 21.1% of the working age population were economically inactive (7.99 million), up 97,000 on the previous quarter and up 125,000 compared to the same quarter a year ago.
- It is estimated that there were 434,000 vacancies in the three months to August 2009, 12,000 lower than the previous quarter and 174,000 lower than in the same period a year ago.³
- Average earnings including bonuses rose by 1.7% in the latest quarter to July 2009 compared to the same period a year ago; average earnings excluding bonuses also rose by 2.2%.
- The claimant count was higher in every constituency in August 2009 compared with August 2008. Between July and August 2009 132 constituencies have seen a fall in the claimant count, 510 have seen a rise (four were unchanged). Compared to August 1997 the claimant count is higher in 366 constituencies but lower in 221 constituencies. 1997 data is not available for Scottish constituencies.

Employment levels

The number of people in employment has been falling since mid-2008. A total of 28.89 million people were in employment in the period May-July 2009, a decrease of 217,000 on the previous quarter and 600,000 lower than during the same period a year ago.

¹ The latest release is available at: <http://www.statistics.gov.uk/pdfdir/lmsuk0909.pdf>. This page is based on data from this release as well as http://www.statistics.gov.uk/OnlineProducts/LMS_FR_HS.asp (historical statistics) and NOMIS: <https://www.nomisweb.co.uk>. The figures used on this page are seasonally adjusted.

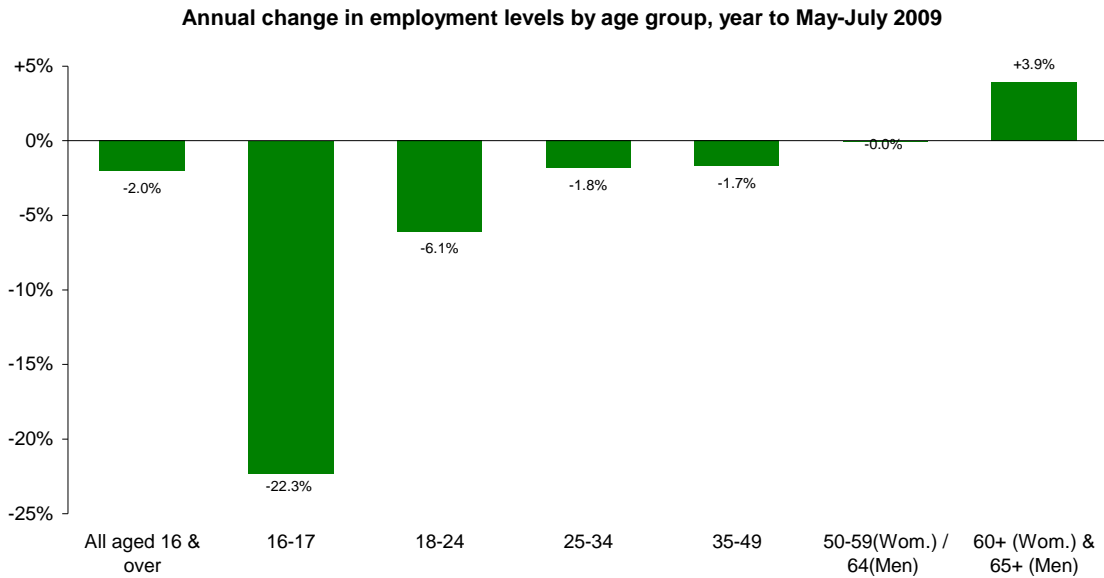

² Seasonally adjusted. The JSA data used in the remainder of this paper are not seasonally adjusted.

³ Data on vacancies advertised through Jobcentre Plus is also available, and is the only vacancy indicator available at a local level. The total count of available vacancies available at Jobcentre Plus in Great Britain in August 2009 was 218,651. See Section III for further explanation and constituency level data.

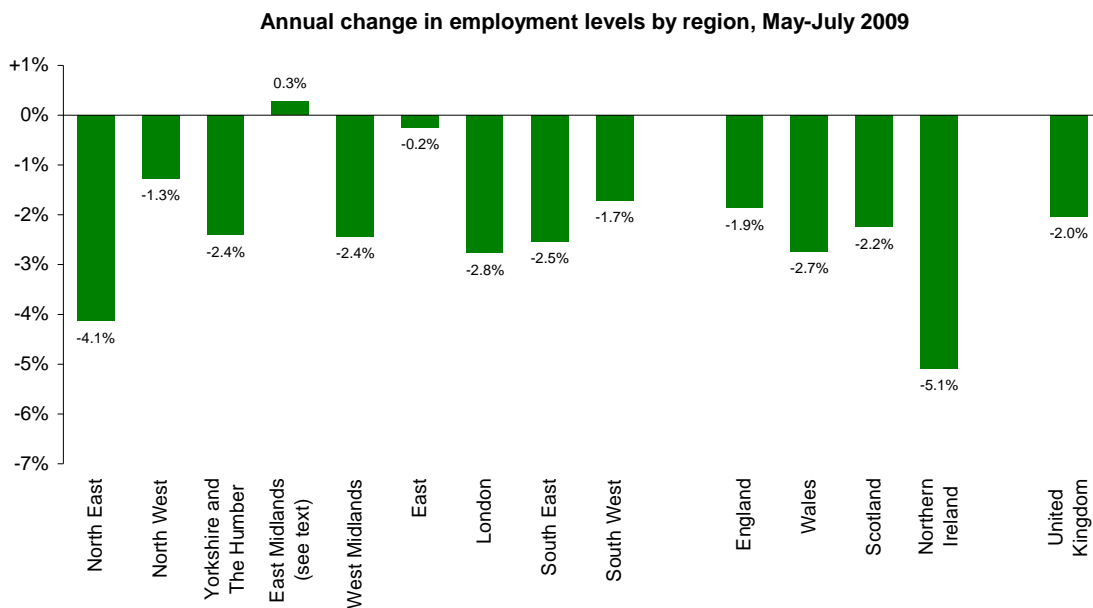

The chart below shows the percentage change in total employment levels by age group for the period May-July 2009 compared with a year ago. It shows that the younger the age group, the greater the percentage decrease in the number of people in employment.

The largest percentage decrease was for 16-17 year olds (-22.3% compared with a year ago). The next largest percentage decrease was in the 18-24 age group (-6.1%). Employment levels for those above the state pension age – 60 for women and 65 for men – are the only age group where employment has increased (+3.9%).

Please note that these figures include both full- and part-time jobs. Full-time employment has fallen by 691,000 during the period May-July 2009 compared with a year ago, while part-time employment has risen by 91,000.

The chart below shows the percentage change in total employment levels by region for the period May-July 2009 compared with a year ago. The largest decrease was in Northern Ireland (-5.1%). The North East saw a 4.1% decline, with London (-2.8%), Wales (-2.7%) and the South East (-2.5%) experiencing the next largest declines.

II JSA Claimant Count by Constituency

A. Introduction

This section of the Research Paper provides the latest data on the monthly count of Jobseeker's Allowance (JSA) claimants in each parliamentary constituency in the United Kingdom. For the purposes of this paper, unemployment means the number of JSA claimants resident in each constituency.

The methodology for calculating the rates has been updated in this edition in order to improve their accuracy. The rates included in this section show the number of claimants as a proportion of the estimated economically active population of working age resident in each constituency in 2006.⁴ Further detail on the methodology is given in the appendix. Prior to this edition of the paper the rates were based on the 2001 population estimates.⁵ Comparisons of rates should not be made between those published by the Library prior to September 2009 and those in the current edition. Basing the rates on the latest available population estimates means they will more accurately reflect the current situation in the constituency and the update will have a greater impact on constituencies which have seen substantial population changes since 2001.

The Office for National Statistics also publishes unemployment data for parliamentary constituencies. These data may be found on the NOMIS website⁶ and on the ONS website.⁷ JSA claimant count rates published by the ONS use the resident working age population and are therefore different from the rates published in this section. Rates included in PQ answers from ONS will also differ from the rates in this section. For an explanation of the different measures of unemployment, and for an exposition of the methodology used to calculate the unemployment rates displayed in this paper please see Library Research Paper 05/08⁸ and the appendix to this paper.

Data for current constituencies exist back to January 1996⁹, and are available upon request from the Economic Policy & Statistics Section [extension 2883].

Part B provides maps that show the latest residence-based claimant count rates for each constituency in the United Kingdom, and the annual percentage change in the claimant count for each UK constituency, expressed as quintile groups.

The rates presented in this part of the paper should be regarded more as a social measure of relative deprivation than as an economic measure of the mismatch between the supply of and demand for labour, as they take no account of people's ability to seek work outside the constituency in which they live. While the rates are based on the latest population estimates at a constituency level, they are constrained by the use of the proportion of the population economically active in 2001. Where constituencies have seen significant socio-economic change or population growth since 2001 the methodology used to calculate the rates may be less accurate in fully reflecting current unemployment rates.

Part E of this section provides some notes on these tables and details the copyright restrictions which apply to the data and the maps.

⁴ The denominator for the rate is calculated using the proportion of the economically active working age population in the 2001 census and the estimated resident working age population in 2006. This means the rates take account of recent population change but not any changes in the economically active population. Between 2001 and 2006 the Labour Force Survey estimates that economic activity rose by around 0.4 percentage points for the UK overall.

⁵ Rates published prior to September 2009 were based on the 2001 economically active and 2001 population. Rates published before January 2005 calculated rates using 1997-based economically active population denominators. See Library Research Paper 05/08 for further details.

Explanatory notes

The following notes should be borne in mind when drawing conclusions from these maps:

Claimant count rate by constituency, August 2009 (pages 10-12)

- The maps on pages 10-12 show residence-based claimant count rates for August 2009 for constituencies in the United Kingdom, with an expanded view of constituencies in selected major conurbations and surrounding areas.
- The 646 constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 129 constituencies (20% of the total in the United Kingdom).
- These groups have been colour-coded, from red – the 20% of constituencies with the highest unemployment rates – through to yellow/light green – the 20% with the lowest unemployment rates.
- It is important to note that the range of unemployment rates covered by each band is different. For example, in August 2009 the top quintile (coloured red) is made up of constituencies with unemployment rates ranging from 7.6% to 20.5%, while the bottom quintile (coloured yellow/light green) is made up of constituencies with unemployment rates ranging from 1.2% to 3.4% (all rounded).
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their unemployment rates may only differ slightly from those in another, neighbouring quintile group.

Percentage change in claimant count levels, August 2008 to August 2009 (page 13)

- The map on page 13 shows the percentage change in residence-based claimant count levels between August 2008 and August 2009 for constituencies in the United Kingdom.
- The 646 constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 129 constituencies (20% of the total in the United Kingdom).
- These groups have been colour-coded, from reddish violet – the 20% of constituencies with the highest percentage increase in unemployment levels – through to pale yellow – the 20% with the lowest increase in unemployment levels.
- It is important to note that the range of percentage changes covered by each band is different. For example, in August 2009 the top quintile (coloured reddish violet) is made up of constituencies with changes in claimant count levels ranging from +107.5% to +171.6%, while the bottom quintile (coloured pale yellow) is made up of constituencies with changes in claimant count levels ranging from +23.1% to +58.5% (all rounded).
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their percentage changes in claimant count levels may only differ slightly from those in another, neighbouring quintile group.
- This map is based on the percentage change in the absolute level of claimants by constituency. Constituencies with relatively low absolute numbers of claimants may appear in this map in the higher quintiles and vice versa; for example, the constituency with the highest percentage rise in claimants (171.6%, 363 claimants to 986 claimants), is also one of the constituencies with the lowest unemployment rates (2.3% in August 2009); the constituency with the highest unemployment rate (20.5%) has the lowest percentage change (23.1%, 7,101 claimants to 8,739 claimants).

NOTE: All mapping is © Ordnance Survey and Ordnance Survey Northern Ireland and must not be reproduced without permission.

E. Table notes

1. A comparison of current levels with those in 1997 is not available for the new Westminster Parliamentary Constituencies in Scotland, which have stood since the May 2005 General Election. Figures are only available for these constituencies since February 2004. Unavailable figures are denoted in the tables by a '..'.
2. The Boundary Commission reviews in 1995 defined 659 constituencies in the United Kingdom. These were defined in terms of electoral wards as they stood at the time of the review. For the purposes of the unemployment statistics however, constituencies represent a best-fit of frozen 1991 wards to the new constituencies.

Boundary alterations between 1991 and 1995 mean that there are inevitably approximations to 1995 boundaries in many constituencies. In some cases, however, the changes to ward boundaries were substantial and some wards are now split between constituencies. These constituencies are indicated with an '(a)' in the following tables.

Four wards with populations below the 1991 Census confidentiality threshold have had their data 'exported' to a ward which is in another constituency. In these cases, the data for the 'exported' ward are included in the constituency to which the ward has been transferred. Constituencies losing data in this way are indicated by '(b)', whereas those gaining data as a result are indicated by '(c)'.¹⁰

3. The following abbreviations for parties have been used:

LAB	Labour	DU	Democratic Unionist Party
CON	Conservative	SDLP	Social Democratic and Labour Party
LD	Liberal Democrat	SF	Sinn Fein
PC	Plaid Cymru	IND	Independent
SNP	Scottish National Party	RES	Respect
SPKR	Speaker	VAC	Vacant
UU	Ulster Unionist Party	INC	Independent Conservative
UKI	UK Independence Party		

The denominators used in this paper are partly derived from the 2001 Census. Census data for England and Wales are published by the Office for National Statistics. Census data for Scotland are published by the General Register Office for Scotland. Census data for Northern Ireland are published by the Northern Ireland Statistics and Research Agency. Census data are © Crown copyright.

The source of the data on claimant count and population levels contained in this publication is National Statistics (NOMIS database) © Crown copyright.

Map data in this publication is reproduced from Ordnance Survey material with the permission of Ordnance Survey on behalf of the Controller of Her Majesty's Stationery Office © Crown copyright. Unauthorised reproduction infringes Crown copyright and may lead to prosecution or civil proceedings. House of Commons Library (Ordnance Survey) 100040654 (2009) and (Ordnance Survey Northern Ireland) 2085 (2009).

¹⁰ Data are transferred from Bath to Wansdyke (one ward), Hereford to Leominster (one ward) and Clywd South to Clwyd West (two wards).

III Other constituency indicators

Data on the JSA claimant count is the most timely labour market indicator available at a constituency level. However a wider selection of data is available from the Office for National Statistics (ONS). Almost all data available at a constituency level is published, with longer time series, in constituency profiles on the NOMIS website.¹¹ The Library is available to provide assistance in accessing this data and advice on interpreting it. The NOMIS website also makes data available at a local authority and ward level.

In this edition of *Unemployment by Constituency* we have introduced an additional table of other constituency level data that is likely to be of current interest to Members of Parliament and their staff. The content is not fixed and may vary between months. We would welcome any comments on both the introduction of the table and the contents.

The tables show the following:

- New estimates of ILO unemployment at a constituency level as published in July 2009. **Please note these are experimental statistics and not yet 'official' statistics.** The current Annual Population Survey-based estimates produced by ONS are subject to a high level of sampling variability at a constituency level and these model-based estimates seek to reduce the sampling error by taking account of JSA claimant count movements in the same period. The data is published quarterly and the latest available is for the year to December 2008. These rates are higher than claimant-based rates as they include those people who indicate they would like to work, and are available for work, but are not claiming (or eligible for) Job Seekers Allowance. Further information on the estimates and a time series is available on the ONS website.¹² However, this data is still subject to sampling variability and excludes Northern Ireland.
- The estimated employment rate in the year to December 2008. This figure is not experimental, is from the Annual Population Survey, and is based on a different methodology than the ILO unemployment estimates. Please note this is sample-based data and subject to sampling variability and excludes Northern Ireland.¹³
- The number of available unfilled vacancies notified to Jobcentre Plus. Please note that this is a snapshot taken at a single point during the month. Vacancies do not need to be notified to Jobcentre Plus (and many are not). Constituencies are not isolated labour markets and therefore any jobsearch is likely to extend beyond the boundaries of the constituency.¹⁴
- The final three columns show the number of JSA claimants broken down into three age groups. Section II presents the simple claimant total for August of 1997, 2008 and 2009, as well as a gender split for August 2009. However greater detail is available on this measure such as a breakdown by age bands and duration.¹⁵

Appendix: Change in methodology for unemployment rates

The methodology for the rates presented in this paper has been updated. The House of Commons Library calculates unemployment rates (“Library rates”) based on JSA claimants as a proportion of the economically active population. ILO unemployment rates are based on the economically active population and library rates are intended as an up-to-date indicator closer to the ILO indicator and better reflecting the potential workforce in a constituency. In labour market statistics the population can be divided into the ‘economically active’ and the ‘economically inactive’. Those who are active are in work or seeking work, those who are inactive are not in work and not seeking work.¹⁶

Claimant count rates published by ONS are based on the overall working age resident population. ONS also publish ILO rates based on the Annual Population Survey (APS) but these are subject to a time lag and sampling variability. They have recently published experimental data improving these estimates and these are presented in section III of this paper.

The denominators used by the Library (the economically active population in each constituency) in previous editions of this paper were based on the proportion of the economically active population in the 2001 census and 2001 population estimates. The new denominators are based on the proportion of the economically active population in the 2001 census and 2006 population estimates.¹⁷ Between 2001 and 2006 the working age population of the UK rose by 3.6%.

We use census estimates of economic activity rates as alternative, and more recent, indicators of economic activity from the Labour Force Survey/Annual Population Survey can be subject to relatively high levels of sampling variability. However, it should be noted that economic activity in the 2001 census was recorded as being around 2% lower than the Labour Force Survey was recording at the time.¹⁸ In revising our denominators we have not taken into account the change in economic activity between 2001 and 2006. Nationally, economic activity has risen by around 0.4 percentage points (according to the LFS); regionally there have been greater variations, as there has been if economic activity is considered by sex. Readers should be aware that in constituencies that have seen significant socio-economic change or population growth since 2001 the methodology used to calculate the rates may be less accurate in fully reflecting current unemployment rates.

Effect of the new denominators

In general the new denominators mean that Library unemployment rates fall. Rankings are broadly similar apart from in constituencies where there has been substantial population change.

The new denominators are on average 3.9% higher. 582 constituencies see a rise in the denominator and 45 see a rise of 10% or more. The largest rise is in Manchester Central (29.2%), where the population has increased rapidly in recent years. 64 constituencies see a fall in the denominator, with the largest fall being 3.9%. The accuracy of using the 2001 estimates of the economically active is likely to reduce where the population change has been particularly significant as, for example, a rise in the population may be due to development or regeneration which in turn may alter the socio-economic balance in the constituency.

Based on JSA claimant data for July 2009 the table overleaf shows the distribution of the change in rate and ranking for constituencies when using the current denominators and the new

¹⁶ See: <http://www.ons.gov.uk/about-statistics/user-guidance/lm-guide/concepts/index.html>

¹⁷ The denominators have been created by individually calculating the economically active male and female populations using 2001 census data and 2006 population estimates. The total population is based on the sum of these two calculations.

¹⁸ ONS, *Census 2001 Quality report for England and Wales*, p.75

denominators. Most rates fall (64 increase) - an outcome to be expected due to the overall rise in the population.

**Distribution of change in rates and ranks due to new denominators,
July 2009 claimant data**

Rates

20 constituencies where % point change > -1.0
54 constituencies where % point change is between -1.0 and -0.5
330 constituencies where % point change is between -0.1 and -0.5
232 constituencies where % point change is between -0.1 and +0.1
10 constituencies where % point change is >+0.1

Ranks

7 constituencies where rank change > -30
141 constituencies where rank change is between -30 and -10
375 constituencies where rank change is between -10 and +10
94 constituencies where rank change is between +10 and +30
29 constituencies where rank change > +30

In terms of rates, 20 constituencies see a decrease of more than 1 percentage point (only 3 decrease by more than 1.5 percentage points, with a maximum decrease of 3.4 percentage points in Manchester Central). 562 constituencies see a change of between -0.5 and +0.1 percentage points. Of the 10 constituencies seeing a rise greater than 0.1 percentage points, none rise by more than 0.2 percentage points.

In terms of the change in rankings, all but 36 constituencies see their rank change by no more than 30 places, with 375 (58% of constituencies) seeing a change in rank of up to +/- 10.

The tables in the following pages compare the ranks and rates using the old and new denominators and the July 2009 JSA data released on 12 August 2009. The first two columns show the new and old rankings based on 646 constituencies where a higher ranking indicates a higher unemployment rate. The first six columns to the right of the constituency name show the new and old rates for all persons as well as for males and females. The final two columns show the change in rank and rate (for all persons) between the old and new methodology.

If you have any questions or concerns with these changes please contact the Library.
