

# Unemployment by Constituency, December 2009

RESEARCH PAPER 10/03 20 January 2010

This paper shows the number of people claiming Jobseeker's Allowance recorded as resident in each constituency in the United Kingdom in December 2009, together with comparisons with the levels in December 2008 and December 1997. Residence-based unemployment rates are given for all 646 constituencies in the United Kingdom. A summary of the latest labour market data is given, along with a selection of other relevant constituency-level indicators.

The paper includes unemployment rates by constituency maps and an annual percentage change map.

Next publication date: 17 February 2010

## I Monthly Labour Market Statistics

Statistics on JSA claimants are one part of a large selection of labour market data released on a monthly basis.<sup>1</sup> This section highlights some of the key figures in the latest labour market release, notes other key news or data releases in the last month, and also looks in more detail at a constituency level at youth unemployment and unemployment by age more generally.

### Highlights

- ILO unemployment fell by 7,000 over the last quarter to 2.46 million (September-November 2009, seasonally adjusted). The unemployment rate was 7.8%. This is the first quarter on quarter fall since spring 2008.
- Claimant count unemployment fell by 15,200 to 1.61 million (seasonally adjusted). The claimant count fell between November and December 2009 in 346 constituencies and rose in 300 constituencies.
- Employment fell by 14,000 over the last quarter (September-November 2009, seasonally adjusted) to 28.92 million. 72.4% of the working age population are in employment.

### Unemployment

- Claimant count unemployment fell by 15,200 in December 2009 to 1.61 million.<sup>2</sup> This was the second consecutive monthly fall in JSA claimants.
- The wider ILO based measure of unemployment was 2.46 million in the period September-November 2009, a fall of 7,000 in the last quarter, a rise of 511,000 compared to the same period a year ago and 569,000 higher than in the same period in 1997. Over the last six months ILO unemployment has remained between 2.4 and 2.5 million in each month.
- The number of people who have been unemployed (ILO measure) for longer than six months increased by 81,000 over the last quarter to 1.19 million (in September-November 2009). This was 446,000 higher than in the same quarter a year ago.
- On a regional basis the highest rates of unemployment (ILO measure) are in the North East (9.8%), West Midlands (9.6%) and London (9.4%) (September-November 2009). Over the last year the ILO unemployment rate has increased across the UK by 1.6 percentage points. The greatest rises have been in Northern Ireland (2.5 percentage points), the West Midlands (2.3 percentage points), Yorkshire and the Humber and Scotland (both 2.2 percentage points).
- In September-November 2009 728,000 people aged 18-24 were unemployed (ILO measure), a fall of 12,000 on the previous quarter and a rise of 111,000 on the same quarter a year ago. The unemployment rate for those aged 18-24 is now 17.7%.
- A total of 927,000 people aged 24 and under were unemployed in September-November 2009.

### Employment

- The number of people in employment (16 and over) has fallen by 14,000 over the last quarter to 28.92 million (September-November 2009); the number of people of working age and in employment has fallen by 24,000 to 27.51 million in the same period. The employment rate for the working age population is 72.4%, 0.1 percentage points lower than the last quarter and a fall of 1.7 percentage points compared to the same quarter a year ago.

---

<sup>1</sup> The latest release is available at: <http://www.statistics.gov.uk/pdfdir/lmsuk0110.pdf>. This page is based on data from this release as well as [http://www.statistics.gov.uk/OnlineProducts/LMS\\_FR\\_HS.asp](http://www.statistics.gov.uk/OnlineProducts/LMS_FR_HS.asp) (historical statistics) and NOMIS: <https://www.nomisweb.co.uk>. The figures used on this page are seasonally adjusted.

<sup>2</sup> Seasonally adjusted. The JSA data used in the remainder of this paper are not seasonally adjusted.

- Over the last quarter, full-time employment fell by 113,000 while part-time employment rose by 99,000. Compared to same quarter one year ago overall employment fell by 451,000, full-time employment fell by 594,000 over the year while part-time employment rose by 143,000.
- Employment in the public sector rose by 23,000 over the last quarter to 6.09 million (September 2009), while employment in the private sector rose by 29,000 to 22.83 million.

### ***Inactivity***

- In September-November 2009 21.2% of the working age population were economically inactive (8.05 million), a rise of 79,000 on the previous quarter and up 202,000 compared to the same quarter a year ago. The number of people inactive due to being a student has risen by 81,000 over the last quarter and by 218,000 over the last year (a rise of 10.8% over the last year).

### ***Vacancies and Earnings***

- It is estimated that there were 448,000 vacancies in the three months to December 2009, a rise of 16,000 on the previous quarter and 80,000 lower than in the same period a year ago.<sup>3</sup>
- Average weekly total pay rose by 0.7% in the latest quarter to November 2009 compared to the same period a year ago; bonus pay was down 9.0% over the same period, regular pay increased by 1.1% over the same period.

### **Other news**

The Centre for Cities published a report on 18 January which compared the economic performance of 64 of the UK's largest cities and towns. In relation to unemployment the report highlighted cities and towns where unemployment (measured by the JSA claimant count) had risen the most, and equally areas where the recession appears to have had less of an impact. For example, it is reported that over the 18 months to November 2009, Hull, Grimsby and Swindon had the greatest percentage point rises in the rate of claimants, while Cambridge, Aberdeen and Blackpool had the lowest percentage point rises in the rate of JSA claimants.<sup>4</sup>

The CIPD published a new forecast for unemployment on 4 January and now expect (ILO) unemployment to peak in summer 2010 at 2.8 million, before falling in the second part of the year. This forecast is a revision on their previous forecast of a peak of 3.2 million.<sup>5</sup>

### **Unemployment by Age**

Data on the age profile of JSA claimants is available on a constituency basis.<sup>6</sup> In some constituencies the JSA claimant count (non-seasonally adjusted) has fallen for several months. The chart below shows a count of Parliamentary Constituencies based on whether the number of JSA claimants has increased, stayed the same or decreased over the last month and three months for three age groups: those aged 24 and under, those aged 25-49 and those aged 50 and over.

For both the 25-49 and 50 and over age groups there is an equal balance between constituencies with rising and falling JSA claimant counts. For the 18-24 age group, the JSA claimant count has fallen in the majority of constituencies. However, please note that this data is not seasonally adjusted, and particularly as we near Christmas (in the data), these results include the effect of seasonal employment.

---

<sup>3</sup> Data on vacancies advertised through Jobcentre Plus is also available, and is the only vacancy indicator available at a local level. The total count of available vacancies available at Jobcentre Plus in Great Britain in December 2009 was 224,052. See Section III for further explanation and constituency level data.

<sup>4</sup> "Centre for Cities annual index shows recession has widened gap between UK cities", Press Release, 18 January 2010 and see also full report: *Cities Outlook 2010*

<sup>5</sup> CIPD, "Unemployment set to peak this year at 2.8 million", 4 January 2010

**JSA claimants by age, increase or decrease over last 1 month and 3 months, count of Parliamentary Constituencies**

*based on data rounded to the nearest 5, not seasonally adjusted*

The current number of JSA claimants in each of these age groups in each constituency is given in Section III of this paper.

**Youth Unemployment**

The rise in youth unemployment has been of particular interest in recent months. The latest data (ILO measure) shows that over the year to September-November 2009 there were 116,000 more 16-24 year olds unemployed and 111,000 more 18-24 year olds unemployed. The unemployment rate is currently 17.7%, no change on the last quarter and 3.1 percentage points higher than the same quarter a year ago. Over the last year the 18-24 unemployment rate peaked in the quarterly data for the period August-October 2009 at 18.4%. The chart below shows the 18-24 unemployment rate since 1992, while the table shows levels and rates between 1992 and 2009.

**18-24 Unemployment Rate, 1992-2009, seasonally adjusted**

**16-24 and 18-24 ILO Unemployment, seasonally adjusted**

	16-24 year olds		18-24 year olds	
	Level (000s)	Level (000s)	Level (000s)	Rate (%)
Sep-Nov 1992	888	751		16.9
Sep-Nov 1997	602	434		11.9
Sep-Nov 2005	653	476		11.9
Sep-Nov 2006	683	496		12.0
Sep-Nov 2007	697	503		12.0
Sep-Nov 2008	811	617		14.6
Sep-Nov 2009	927	728		17.7

Source: Labour Force Survey

At a constituency level, while survey based estimates are available, a more timely indicator of levels of youth unemployment is given by JSA claimants aged 24 and under. The average annual increase in the number of JSA claimants 24 and under in a constituency is 173 or 31%. The table overleaf shows the 10 constituencies with the greatest and smallest rises in 16-24 year old claimants over the last year and month, ordered firstly by the change in the level over the last year and secondly by the percentage change over the last year. In three constituencies the number of JSA claimants aged under 24 has fallen in the last year.

## II JSA Claimant Count by Constituency

### A Introduction

This section of the Research Paper provides the latest data on the monthly count of Jobseeker's Allowance (JSA) claimants in each parliamentary constituency in the United Kingdom. For the purposes of this paper, unemployment means the number of JSA claimants resident in each constituency.

The methodology for calculating the rates was updated in the August 2009 edition<sup>7</sup> (published 16 September 2009) in order to improve their accuracy. The rates included in this section show the number of claimants as a proportion of the estimated economically active population of working age resident in each constituency in 2006.<sup>8</sup> Further detail on the methodology is given in a Library Standard Note.<sup>9</sup> Prior to the August 2009 edition of the paper the rates were based on the 2001 population estimates.<sup>10</sup> Comparisons of rates should not be made between those published by the Library prior to September 2009 and those in the current edition.

The Office for National Statistics also publishes unemployment data for parliamentary constituencies. These data may be found on the NOMIS website<sup>11</sup> and on the ONS website.<sup>12</sup> JSA claimant count rates published by the ONS use the resident working age population and are therefore different from the rates published in this section. Rates included in PQ answers from ONS will also differ from the rates in this section. For an explanation of the different measures of unemployment, and for an exposition of the methodology used to calculate the unemployment rates displayed in this paper please see Library Research Paper 05/08<sup>13</sup> and Standard Note SN/EP/5217.<sup>14</sup>

Data for current constituencies exist back to January 1996<sup>15</sup>, and are available upon request from the Economic Policy & Statistics Section [extension 2883].

Part B provides maps that show the latest residence-based claimant count rates for each constituency in the United Kingdom, and the annual percentage change in the claimant count for each UK constituency, expressed as quintile groups. Part E of this section provides some notes on the tables and details the copyright restrictions which apply to the data and the maps.

The rates presented in this part of the paper should be regarded more as a social measure of relative deprivation than as an economic measure of the mismatch between the supply of and demand for labour, as they take no account of people's ability to seek work outside the constituency in which they live. While the rates are based on the latest population estimates at a constituency level, they are constrained by the use of the proportion of the population economically active in 2001. Where constituencies have seen significant socio-economic change or population growth since 2001 the methodology used to calculate the rates may be less accurate in fully reflecting current unemployment rates.

---

<sup>7</sup> <http://www.parliament.uk/commons/lib/research/rp2009/RP09-072.pdf>

<sup>8</sup> The denominator for the rate is calculated using the proportion of the economically active working age population in the 2001 census and the estimated resident working age population in 2006. This means the rates take account of recent population change but not any changes in the economically active population. Between 2001 and 2006 the Labour Force Survey estimates that economic activity rose by around 0.4 percentage points for the UK overall.

<sup>9</sup> <http://www.parliament.uk/commons/lib/research/briefings/snep-05217.pdf>

<sup>10</sup> Rates published prior to September 2009 were based on the 2001 economically active and 2001 population. Rates published before January 2005 calculated rates using 1997-based economically active population denominators. See Library Research Paper 05/08 for further details.

## Explanatory notes

The following notes should be borne in mind when drawing conclusions from these maps:

### Claimant count rate by constituency, December 2009 (pages 4-6)

- The maps on pages 4-6 show residence-based claimant count rates for December 2009 for constituencies in the United Kingdom, with an expanded view of constituencies in selected major conurbations and surrounding areas.
- The 646 constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 129 constituencies (20% of the total in the United Kingdom).
- These groups have been colour-coded, from red – the 20% of constituencies with the highest unemployment rates – through to yellow/light green – the 20% with the lowest unemployment rates.
- It is important to note that the range of unemployment rates covered by each band is different. For example, in December 2009 the top quintile (coloured red) is made up of constituencies with unemployment rates ranging from 7.5% to 20.5%, while the bottom quintile (coloured yellow/light green) is made up of constituencies with unemployment rates ranging from 1.1% to 3.3% (all rounded).
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their unemployment rates may only differ slightly from those in another, neighbouring quintile group.

### Percentage change in claimant count levels, December 2008 to December 2009 (page 7)

- The map on page 7 shows the percentage change in residence-based claimant count levels between December 2008 and December 2009 for constituencies in the United Kingdom.
- The 646 constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 129 constituencies (20% of the total in the United Kingdom).
- These groups have been colour-coded, from reddish violet – the 20% of constituencies with the highest percentage increase in unemployment levels – through to pale yellow – the 20% with the lowest increase in unemployment levels.
- It is important to note that the range of percentage changes covered by each band is different. For example, in December 2009 the top quintile (coloured reddish violet) is made up of constituencies with changes in claimant count levels ranging from +47.5% to +78.7%, while the bottom quintile (coloured pale yellow) is made up of constituencies with changes in claimant count levels ranging from -2.1% to +27.2% (all rounded).
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their percentage changes in claimant count levels may only differ slightly from those in another, neighbouring quintile group.
- This map is based on the percentage change in the absolute level of claimants by constituency. Constituencies with relatively low absolute numbers of claimants may appear in this map in the higher quintiles and vice versa; for example, the constituency with the highest percentage rise in claimants (78.7%, 788 claimants to 1,408 claimants), is also one of the constituencies with the lowest unemployment rates (2.7% in December 2009); the constituency with the highest unemployment rate (20.5%) has one of the lowest percentage changes (17.4%, 7,442 claimants to 8,738 claimants).

NOTE: All mapping is © Ordnance Survey and Ordnance Survey Northern Ireland and must not be reproduced without permission.

**E Table notes**

1. A comparison of current levels with those in 1997 is not available for the new Westminster Parliamentary Constituencies in Scotland, which have stood since the May 2005 General Election. Figures are only available for these constituencies since February 2004. Unavailable figures are denoted in the tables by a ‘.’.
2. The Boundary Commission reviews in 1995 defined 659 constituencies in the United Kingdom. These were defined in terms of electoral wards as they stood at the time of the review. For the purposes of the unemployment statistics however, constituencies represent a best-fit of frozen 1991 wards to the new constituencies.

Boundary alterations between 1991 and 1995 mean that there are inevitably approximations to 1995 boundaries in many constituencies. In some cases, however, the changes to ward boundaries were substantial and some wards are now split between constituencies. These constituencies are indicated with an ‘(a)’ in the following tables.

Four wards with populations below the 1991 Census confidentiality threshold have had their data ‘exported’ to a ward which is in another constituency. In these cases, the data for the ‘exported’ ward are included in the constituency to which the ward has been transferred. Constituencies losing data in this way are indicated by ‘(b)’, whereas those gaining data as a result are indicated by ‘(c)’.<sup>16</sup>

3. The following abbreviations for parties have been used:

LAB	Labour	DU	Democratic Unionist Party
CON	Conservative	SDLP	Social Democratic and Labour Party
LD	Liberal Democrat	SF	Sinn Fein
PC	Plaid Cymru	IND	Independent
SNP	Scottish National Party	RES	Respect
SPKR	Speaker	VAC	Vacant
UU	Ulster Unionist Party	INC	Independent Conservative
UKI	UK Independence Party	INL	Independent Labour

The denominators used in this paper are partly derived from the 2001 Census. Census data for England and Wales are published by the Office for National Statistics. Census data for Scotland are published by the General Register Office for Scotland. Census data for Northern Ireland are published by the Northern Ireland Statistics and Research Agency. Census data are © Crown copyright.

The source of the data on claimant count and population levels contained in this publication is National Statistics (NOMIS database) © Crown copyright.

Map data in this publication is reproduced from Ordnance Survey material with the permission of Ordnance Survey on behalf of the Controller of Her Majesty’s Stationery Office © Crown copyright. Unauthorised reproduction infringes Crown copyright and may lead to prosecution or civil proceedings. House of Commons Library (Ordnance Survey) 100040654 (2009) and (Ordnance Survey Northern Ireland) 2085 (2009).

---

<sup>16</sup> Data are transferred from Bath to Wansdyke (one ward), Hereford to Leominster (one ward) and Clywd South to Clwyd West (two wards).

### III Other constituency indicators

Data on the JSA claimant count is the most timely labour market indicator available at a constituency level. However a wider selection of data is available from the Office for National Statistics (ONS). Almost all data available at a constituency level is published, with longer time series, in constituency profiles on the NOMIS website.<sup>17</sup> The Library is available to provide assistance in accessing this data and advice on interpreting it. The NOMIS website also makes data available at a local authority and ward level.

In this edition of *Unemployment by Constituency* we have introduced an additional table of other constituency level data that is likely to be of current interest to Members of Parliament and their staff. The content is not fixed and may vary between months. We would welcome any comments on both the introduction of the table and the contents.

The tables show the following:

- New estimates of ILO unemployment at a constituency level as first published in July 2009. **Please note these are experimental statistics and not yet 'official' statistics.** The current Annual Population Survey-based estimates produced by ONS are subject to a high level of sampling variability at a constituency level and these model-based estimates seek to reduce the sampling error by taking account of JSA claimant count movements in the same period. The data is published quarterly and the latest available is for the year to March 2009. These rates are higher than claimant-based rates as they include those people who indicate they would like to work, and are available for work, but are not claiming (or eligible for) Job Seekers Allowance. Further information on the estimates and a time series is available on the ONS website.<sup>18</sup> However, this data is still subject to sampling variability and excludes Northern Ireland.
- The estimated employment rate in the year to June 2009. This figure is not experimental, is from the Annual Population Survey, and is based on a different methodology than the ILO unemployment estimates. Please note this is sample-based data and subject to sampling variability and excludes Northern Ireland.<sup>19</sup>
- The number of available unfilled vacancies notified to Jobcentre Plus. Please note that this is a snapshot taken at a single point during the month. Vacancies do not need to be notified to Jobcentre Plus (and many are not). Constituencies are not isolated labour markets and therefore any jobsearch is likely to extend beyond the boundaries of the constituency.<sup>20</sup>
- The final three columns show the number of JSA claimants broken down into three age groups. Section II presents the simple claimant total for December of 1997, 2008 and 2009, as well as a gender split for December 2009. However greater detail is available on this measure such as a breakdown by age bands and duration.<sup>21</sup>
