

Unemployment by Constituency, January 2010

RESEARCH PAPER 10/13 17 February 2010

This paper shows the number of people claiming Jobseeker's Allowance recorded as resident in each constituency in the United Kingdom in January 2010, together with comparisons with the levels in January 2009 and January 1997. Residence-based unemployment rates are given for all 646 constituencies in the United Kingdom. A summary of the latest labour market data is given, along with a selection of other relevant constituency-level indicators.

The paper includes unemployment rates by constituency maps and an annual percentage change map.

Next publication date: 17 March 2010

I Monthly Labour Market Statistics

Statistics on JSA claimants are one part of a large selection of labour market data released on a monthly basis.¹ This section highlights some of the key figures in the latest labour market release, notes other key news or data releases in the last month, and also looks in more detail at part-time employment and earnings at a constituency level.

Key Figures

- Claimant count unemployment rose by 23,500 to 1.64 million in January 2010. The claimant count rose between December 2009 and January 2010 in 637 constituencies and fell in 9 constituencies. Compared to January 2009, JSA claimant levels are higher in 644 constituencies and lower in 2 constituencies.
- ILO unemployment fell by 3,000 over the last quarter to 2.46 million (October-December 2009). The unemployment rate was 7.8%.
- Employment fell by 12,000 over the last quarter (October-December 2009) to 28.91 million. 72.4% of the working age population are in employment.

Unemployment

- Claimant count unemployment rose by 23,500 in January 2010 to 1.64 million.² This rise follows two consecutive months of declines. The claimant count was last higher in April 1997.
- The wider ILO based measure of unemployment was 2.46 million in the period October-December 2009, a fall of 3,000 from the last quarter, a rise of 448,000 compared to the same period a year ago and 592,000 higher than in the same period in 1997. Over the last seven months ILO unemployment has remained between 2.4 and 2.5 million in each month.
- The number of people who have been unemployed (ILO measure) for longer than six months increased by 41,000 over the last quarter to 1.20 million (October-December 2009). This was 419,000 higher than in the same quarter a year ago.
- On a regional basis the highest rates of unemployment (ILO measure) were in the West Midlands (9.4%), North East (9.3%), Yorkshire and the Humber and London (both 9.1%) (October-December 2009). Over the last year the ILO unemployment rate has increased across the UK by 1.4 percentage points. The greatest rises have been in Yorkshire and the Humber (2.4 percentage points), Scotland (2.4 percentage points) and London (1.8 percentage points).
- In October-December 2009 725,000 people aged 18-24 were unemployed (ILO measure), a fall of 13,000 on the previous quarter and a rise of 101,000 on the same quarter a year ago. The unemployment rate for those aged 18-24 is now 17.6%.
- 923,000 people aged 24 and under were (ILO) unemployed in October-December 2009.

Employment

- The number of people in employment (16 and over) fell by 12,000 over the last quarter to 28.91 million (October-December 2009); the number of people of working age in employment fell by 21,000 to 27.50 million in the same period. The employment rate for the working age population was 72.4%, 0.1 percentage points lower than the last quarter and a fall of 1.7 percentage points compared to the same quarter a year ago.

¹ The latest release is available at: <http://www.statistics.gov.uk/pdfdir/lmsuk0210.pdf>. This page is based on data from this release as well as http://www.statistics.gov.uk/OnlineProducts/LMS_FR_HS.asp (historical statistics) and NOMIS: <https://www.nomisweb.co.uk>. The figures used on this page are seasonally adjusted.

² Seasonally adjusted. The JSA data used in the remainder of this paper are not seasonally adjusted.

- Over the last quarter, full-time employment fell by 37,000 while part-time employment rose by 25,000. Compared to the same quarter one year ago overall employment fell by 428,000, full-time employment fell by 585,000 while part-time employment rose by 157,000.
- Employment in the public sector rose by 23,000 over the last quarter to 6.09 million (September 2009), while employment in the private sector rose by 15,000 to 22.82 million.
- Employment of those born in the UK fell by 327,000 to 25.26 million in the year to October-December 2009; employment of those born outside the UK fell by 98,000 to 3.72 million over the same period.

Inactivity

- In October-December 2009 21.3% of the working age population were economically inactive (8.08 million), a rise of 72,000 on the previous quarter and up 241,000 compared to the same quarter a year ago. The number of people inactive due to being a student has risen by 62,000 over the last quarter and by 217,000 over the last year (a rise of 10.6% over the last year).

Vacancies and Earnings

- It is estimated that there were 479,000 vacancies in the UK in the three months to January 2010, a rise of 49,000 on the previous quarter and 24,000 lower than in the same period a year ago.³
- Average weekly total pay rose by 0.8% in the latest quarter to December 2009 compared to the same period a year ago; bonus pay was down 6.7% over the same period and regular pay increased by 1.2% over the same period.

Data for New Constituencies

JSA claimant count data and Jobcentre Plus vacancies for the new constituency boundaries were published for the first time on 17 February 2010.

JSA claimant data is available back to 2004 on a not seasonally adjusted basis. The data is available to download from the NOMIS website (under 'advanced search').⁴ The website also allows users to download the data for various age groups and duration of claims.

The Library will be shortly publishing a Standard Note covering the new data. In the meantime please contact this paper's authors for assistance or guidance with using or accessing the new data.

Other news

- LFS datasets, including those used in the monthly statistical bulletin, have been fully re-weighted this month back to June-August 2006 to take account of the latest population estimates.
- The Chartered Institute of Personnel and Development (CIPD) published their quarterly survey of HR professionals on 15 February 2010 and found that the balance of employers intending to increase staffing levels compared to those that intend to decrease staffing levels in the first quarter of 2010 was -5%, compared to -3% in the previous quarter and -9% in the same quarter last year. The survey indicates that this intended reduction is focused in the public sector, which shows a net balance of -31%, compared to a more positive +5% in the private sector. Overall, 19% of employers intend to increase their staffing levels.⁵

³ Data on vacancies advertised through Jobcentre Plus is also available, and is the only vacancy indicator available at a local level. The total count of vacancies available at Jobcentre Plus in Great Britain in January 2010 was 187,442. See Section III for further explanation and constituency level data.

⁴ <https://www.nomisweb.co.uk/>

⁵ CIPD, *Labour Market Outlook Winter 2009-10*, 15 February 2010

- The Association of Graduate Recruiters reported that the reduction in graduate vacancies in 2009 had not been as severe as they predicted last summer, with vacancies in 2009 falling by 8.9%. Their employer-based survey found that graduate vacancies are forecast to fall by 1.6% in 2010.⁶

Part time employment

One feature of the labour market in recent years is the rise in part-time working. The Labour Force Survey (LFS) asks respondents about their working hours.⁷

The table below shows full- and part-time employment in October-December 2009 as well as the changes from the same quarter in 1992, 1997, 2005 and 2007.⁸ Since 1997 (October-December quarters) employment in both part-time work and full-time work has risen, both for men and women. Part-time work, as a proportion of all those in employment, has risen by 1.6 percentage points from 25.0% to 26.6%; for men it has risen by 3.4 percentage points from 8.7% to 12.2% (*figures do not sum due to rounding*); and, for women, it has fallen by 1.5 percentage points from 44.5% to 43.0%.

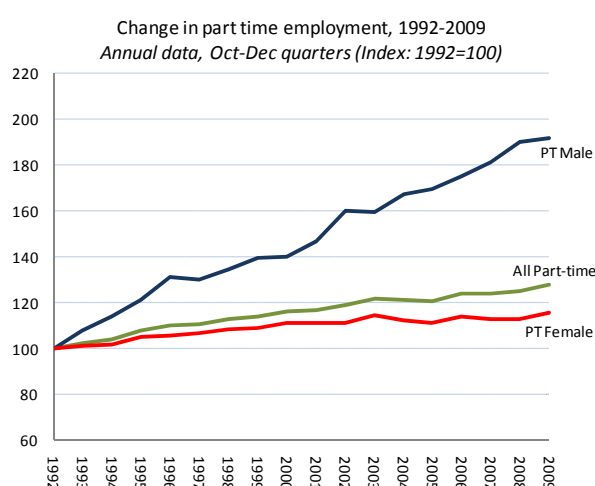

Employment, Full-time and Part-time trends, UK, split by sex, 1992-2009

seasonally adjusted, includes those in self-employment

	All in employment			Male			Female		
	Full-time	Part-time		Full-time	Part-time		Full-time	Part-time

Source: ONS, Labour Force Survey

This LFS data is seasonally adjusted and available from the ONS website.⁹ As with any survey based data, estimates are subject to sampling error.

Over the recession, the decline in full-time employment and rise in part-time employment have been more noticeable for male workers. Compared to October-December 2007, men in full-time employment has fallen by 4.3% while part-time employment has risen by 6.0%; women in full-time employment has fallen by 1.3% while part-time employment has risen by 2.0%. However, as this chart shows, part-time work by men has been growing since 1992 (as far back as consistent data is available).

Estimates of the split in full- and part-time employment are available by constituency (except for Northern Ireland) from the Annual Population Survey (APS). The latest data available from this

⁶ "Graduate jobs 'relatively unscathed' by recession", *Personnel Today*, 9 February 2010

⁷ <http://www.ons.gov.uk/about-statistics/user-guidance/lm-guide/concepts/employment/related-concepts/contract-status/index.html>

⁸ Please contact the Library for a full version of this table for each year.

⁹ <http://www.statistics.gov.uk/statbase/product.asp?vlnk=8282>

source cover the year to June 2009. It should be noted that the APS can be subject to sampling error, particularly at low geographical levels such as constituencies. The incidence of part-time employment varies widely by constituency from the highest proportions in West Derbyshire, Leeds North West and Selby (39.4%, 37.6% and 36.8% of all in employment respectively) to the lowest proportions in Hampstead and Highgate, Tooting and Battersea (9.8%, 10.7% and 12.2% respectively).¹⁰

An ONS article published on 16 February 2010 considered the wider issue of underemployment in the UK labour market, estimating that there were 2.8 million 'underemployed' people in the UK in Q3 2009 (9.9% of the total workforce or 9.0% of the economically active population), a rise of 594,000 compared to the same period a year ago.¹¹ Underemployment covers those in work looking for an additional job, looking to work additional hours in the same job or those looking for a replacement job with longer hours. To be included, people have to be available to work longer hours within two weeks.

Earnings by Constituency

Data on average earnings by constituency is available from the Annual Survey of Hours and Earnings (ASHE). The latest update to this data was published in November 2009 and related to earnings in April 2009.¹²

Data are published on the mean and median level of earnings; the median is the preferred measure for earnings data. As with any statistical sample survey, estimates from the ASHE are subject to sampling variability and should therefore be treated with a degree of caution. This is particularly the case at a constituency level where estimates can be subject to high confidence intervals. The survey is based on employees whose earnings were not affected by absence.

The table below shows the constituencies with the highest and lowest gross weekly full-time median earnings. For each constituency detail is available on full- and part-time earnings, earnings by sex and a distribution of earnings in the constituency by percentile. Further detail and analysis are available from the Library, while all the data are available on the ONS website (see footnotes).

Gross Median Weekly Full-Time Earnings, April 2009, Constituencies with highest and lowest levels
in £, employee pay where earnings have not been affected by absence, based on those resident in the constituency

10 Highest Weekly Earnings		10 Lowest Weekly Earnings	
Kensington and Chelsea	1,069	Blaenau Gwent	362
Cities of London and Westminster	767	Easington	366
Richmond Park	767	Blackpool South	368
Hampstead and Highgate	733	North Devon	368
Tooting	731	Wolverhampton South East	368
Hammersmith and Fulham	704	Torbay	369
Twickenham	703	Bradford West	374
Wimbledon	703	Boston and Skegness	375
Putney	700	Bootle	376
Chesham and Amersham	696	Leicester East	376

Notes: Excludes Northern Ireland

Data is subject to sampling error, particularly at low geographical breakdowns such as constituencies.

¹² For 2009 data see: <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=15313>; for earnings by constituency (place of residence) see: http://www.statistics.gov.uk/downloads/theme_labour/ASHE-2009/2009_res_pc.pdf; other years available at: <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=13101>. Data back to 1997 is available although there are consistency issues.

II JSA Claimant Count by Constituency

A Introduction

This section of the Research Paper provides the latest data on the monthly count of Jobseeker's Allowance (JSA) claimants in each parliamentary constituency in the United Kingdom. For the purposes of this paper, unemployment means the number of JSA claimants resident in each constituency.

The methodology for calculating the rates was updated in the August 2009 edition¹³ (published 16 September 2009) in order to improve their accuracy. The rates included in this section show the number of claimants as a proportion of the estimated economically active population of working age resident in each constituency in 2006.¹⁴ Further detail on the methodology is given in a Library Standard Note.¹⁵ Prior to the August 2009 edition of the paper the rates were based on the 2001 population estimates.¹⁶ Comparisons of rates should not be made between those published by the Library prior to September 2009 and those in the current edition.

The Office for National Statistics also publishes unemployment data for parliamentary constituencies. These data may be found on the NOMIS website¹⁷ and on the ONS website.¹⁸ JSA claimant count rates published by the ONS use the resident working age population and are therefore different from the rates published in this section. Rates included in PQ answers from ONS will also differ from the rates in this section. For an explanation of the different measures of unemployment, and for an exposition of the methodology used to calculate the unemployment rates displayed in this paper please see Library Research Paper 05/08¹⁹ and Standard Note SN/EP/5217.²⁰

Data for current constituencies exist back to January 1996²¹, and are available upon request from the Economic Policy & Statistics Section [extension 2883].

Part B provides maps that show the latest residence-based claimant count rates for each constituency in the United Kingdom, and the annual percentage change in the claimant count for each UK constituency, expressed as quintile groups. Part E of this section provides some notes on the tables and details the copyright restrictions which apply to the data and the maps.

The rates presented in this part of the paper should be regarded more as a social measure of relative deprivation than as an economic measure of the mismatch between the supply of and demand for labour, as they take no account of people's ability to seek work outside the constituency in which they live. While the rates are based on the latest population estimates at a constituency level, they are constrained by the use of the proportion of the population economically active in 2001. Where constituencies have seen significant socio-economic change or population growth since 2001 the methodology used to calculate the rates may be less accurate in fully reflecting current unemployment rates.

¹³ <http://www.parliament.uk/commons/lib/research/rp2009/RP09-072.pdf>

¹⁴ The denominator for the rate is calculated using the proportion of the economically active working age population in the 2001 census and the estimated resident working age population in 2006. This means the rates take account of recent population change but not any changes in the economically active population. Between 2001 and 2006 the Labour Force Survey estimates that economic activity rose by around 0.4 percentage points for the UK overall.

¹⁵ <http://www.parliament.uk/commons/lib/research/briefings/snep-05217.pdf>

¹⁶ Rates published prior to September 2009 were based on the 2001 economically active and 2001 population. Rates published before January 2005 calculated rates using 1997-based economically active population denominators. See Library Research Paper 05/08 for further details.

Explanatory notes

The following notes should be borne in mind when drawing conclusions from these maps:

Claimant count rate by constituency, January 2010 (pages 6-8)

- The maps on pages 6-8 show residence-based claimant count rates for January 2010 for constituencies in the United Kingdom, with an expanded view of constituencies in selected major conurbations and surrounding areas.
- The 646 constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 129 constituencies (20% of the total in the United Kingdom).
- These groups have been colour-coded, from red – the 20% of constituencies with the highest unemployment rates – through to yellow/light green – the 20% with the lowest unemployment rates.
- It is important to note that the range of unemployment rates covered by each band is different. For example, in January 2010 the top quintile (coloured red) is made up of constituencies with unemployment rates ranging from 7.8% to 20.7%, while the bottom quintile (coloured yellow/light green) is made up of constituencies with unemployment rates ranging from 1.2% to 3.5% (all rounded).
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their unemployment rates may only differ slightly from those in another, neighbouring quintile group.

Percentage change in claimant count levels, January 2009 to January 2010 (page 9)

- The map on page 9 shows the percentage change in residence-based claimant count levels between January 2009 and January 2010 for constituencies in the United Kingdom.
- The 646 constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 129 constituencies (20% of the total in the United Kingdom).
- These groups have been colour-coded, from reddish violet – the 20% of constituencies with the highest percentage increase in unemployment levels – through to pale yellow – the 20% with the lowest increase in unemployment levels.
- It is important to note that the range of percentage changes covered by each band is different. For example, in January 2010 the top quintile (coloured reddish violet) is made up of constituencies with changes in claimant count levels ranging from +38.3% to +74.0%, while the bottom quintile (coloured pale yellow) is made up of constituencies with changes in claimant count levels ranging from -0.8% to +20.6% (all rounded).
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their percentage changes in claimant count levels may only differ slightly from those in another, neighbouring quintile group.
- This map is based on the percentage change in the absolute level of claimants by constituency. Constituencies with relatively low absolute numbers of claimants may appear in this map in the higher quintiles and vice versa; for example, the constituency with the highest percentage rise in claimants (74.0%, 435 claimants to 757 claimants), is also one of the constituencies with the lowest unemployment rates (1.5% in January 2010); the constituency with the highest unemployment rate (20.7%) has one of the lowest percentage changes (15.9%, 7,607 claimants to 8,816 claimants).

NOTE: All mapping is © Ordnance Survey and Ordnance Survey Northern Ireland and must not be reproduced without permission.

E Table notes

1. A comparison of current levels with those in 1997 is not available for the new Westminster Parliamentary Constituencies in Scotland, which have stood since the May 2005 General Election. Figures are only available for these constituencies since February 2004. Unavailable figures are denoted in the tables by a ‘.’.
2. The Boundary Commission reviews in 1995 defined 659 constituencies in the United Kingdom. These were defined in terms of electoral wards as they stood at the time of the review. For the purposes of the unemployment statistics however, constituencies represent a best-fit of frozen 1991 wards to the new constituencies.

Boundary alterations between 1991 and 1995 mean that there are inevitably approximations to 1995 boundaries in many constituencies. In some cases, however, the changes to ward boundaries were substantial and some wards are now split between constituencies. These constituencies are indicated with an ‘(a)’ in the following tables.

Four wards with populations below the 1991 Census confidentiality threshold have had their data ‘exported’ to a ward which is in another constituency. In these cases, the data for the ‘exported’ ward are included in the constituency to which the ward has been transferred. Constituencies losing data in this way are indicated by ‘(b)’, whereas those gaining data as a result are indicated by ‘(c)’.²²

3. The following abbreviations for parties have been used:

LAB	Labour	DU	Democratic Unionist Party
CON	Conservative	SDLP	Social Democratic and Labour Party
LD	Liberal Democrat	SF	Sinn Fein
PC	Plaid Cymru	IND	Independent
SNP	Scottish National Party	RES	Respect
SPKR	Speaker	VAC	Vacant
UU	Ulster Unionist Party	INC	Independent Conservative
UKI	UK Independence Party	INL	Independent Labour

The denominators used in this paper are partly derived from the 2001 Census. Census data for England and Wales are published by the Office for National Statistics. Census data for Scotland are published by the General Register Office for Scotland. Census data for Northern Ireland are published by the Northern Ireland Statistics and Research Agency. Census data are © Crown copyright.

The source of the data on claimant count and population levels contained in this publication is National Statistics (NOMIS database) © Crown copyright.

Map data in this publication is reproduced from Ordnance Survey material with the permission of Ordnance Survey on behalf of the Controller of Her Majesty’s Stationery Office © Crown copyright. Unauthorised reproduction infringes Crown copyright and may lead to prosecution or civil proceedings. House of Commons Library (Ordnance Survey) 100040654 (2010) and (Ordnance Survey Northern Ireland) 2085 (2010).

²² Data are transferred from Bath to Wansdyke (one ward), Hereford to Leominster (one ward) and Clywd South to Clwyd West (two wards).

III Other constituency indicators

Data on the JSA claimant count is the most timely labour market indicator available at a constituency level. However a wider selection of data is available from the Office for National Statistics (ONS). Almost all data available at a constituency level is published, with longer time series, in constituency profiles on the NOMIS website.²³ The Library is available to provide assistance in accessing this data and advice on interpreting it. The NOMIS website also makes data available at a local authority and ward level.

In this edition of *Unemployment by Constituency* we have introduced an additional table of other constituency level data that is likely to be of current interest to Members of Parliament and their staff. The content is not fixed and may vary between months. We would welcome any comments on both the introduction of the table and the contents.

The tables show the following:

- New estimates of ILO unemployment at a constituency level as first published in July 2009. **Please note these are experimental statistics and not yet 'official' statistics.** The current Annual Population Survey-based estimates produced by ONS are subject to a high level of sampling variability at a constituency level and these model-based estimates seek to reduce the sampling error by taking account of JSA claimant count movements in the same period. The data is published quarterly and the latest available is for the year to June 2009. These rates are higher than claimant-based rates as they include those people who indicate they would like to work, and are available for work, but are not claiming (or eligible for) Job Seekers Allowance. Further information on the estimates and a time series is available on the ONS website.²⁴ However, this data is still subject to sampling variability and excludes Northern Ireland.
- The estimated employment rate in the year to June 2009. This figure is not experimental, is from the Annual Population Survey, and is based on a different methodology than the ILO unemployment estimates. Please note this is sample-based data and subject to sampling variability and excludes Northern Ireland.²⁵
- The number of available unfilled vacancies notified to Jobcentre Plus. Please note that this is a snapshot taken at a single point during the month. Vacancies do not need to be notified to Jobcentre Plus (and many are not). Constituencies are not isolated labour markets and therefore any jobsearch is likely to extend beyond the boundaries of the constituency.²⁶
- The final three columns show the number of JSA claimants broken down into three age groups. Section II presents the simple claimant total for January of 1997, 2009 and 2010, as well as a gender split for January 2010. However greater detail is available on this measure such as a breakdown by age bands and duration.²⁷
