

Unemployment by Constituency: August 2010

RESEARCH PAPER 10/51 11 August 2010

This paper presents labour market data for Parliamentary Constituencies. A summary of the latest national and regional labour market data is given, along with a selection of relevant constituency-level indicators including the latest Jobseeker's Allowance (JSA) claimant count data.

The latest data show:

- Claimant count unemployment fell by 3,800 to 1.46 million in July 2010 (seasonally adjusted). Compared with July 2009, JSA claimant levels are now higher in 104 constituencies (16%) and lower in 526 constituencies (84%).
- ILO unemployment fell by 49,000 over the last three months to 2.46 million (April-June 2010). The unemployment rate is 7.8%, unchanged compared with the same period a year ago.

From this edition onwards, the Library's JSA claimant rate is calculated as a percentage of the economically active population **aged 16 to 64**, rather than the economically active population **of working age**. This is in line with the ONS's decision to shift away from presenting working-age labour market indicators ahead of forthcoming increases in the female state pension age.

The claimant rates shown in this month's paper are therefore not consistent with the rates in previous editions. More details on the change are provided inside this edition (pages 3-4).

1 Monthly labour market statistics

Statistics on Jobseeker's Allowance (JSA) claimants are one part of a large selection of labour market data released on a monthly basis.¹ This section highlights some of the key figures in the latest labour market release and also looks in more detail at changes in JSA claimants at a constituency level.

Unemployment

JSA claimant count unemployment fell by 3,800 in July 2010 to 1.46 million.² It is 120,400 lower than in July 2009.

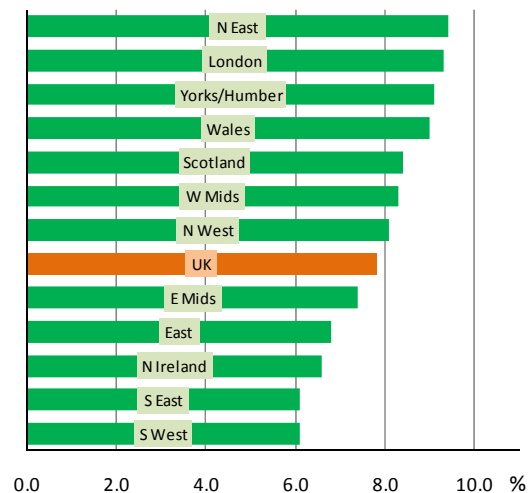

The wider ILO based measure of unemployment was 2.46 million in the period April-June 2010, a fall of 49,000 from the last quarter, but an increase of 23,000 compared with the same period a year ago and 406,000 higher than in April-June 1997. The unemployment rate is 7.8%, 0.2 percentage points lower than in the last quarter, and unchanged compared with the same period a year ago.

The number of people who have been unemployed (ILO measure) for longer than six months decreased by 10,000 over the last quarter to 1.30 million (April-June 2010). This was 270,000 higher than in the same quarter a year ago.

On a regional basis the highest rates of unemployment (ILO measure) were in the North East (9.4%), London (9.3%) and Yorkshire and the Humber (9.1%) (April-June 2010, see chart). Over the last year the ILO unemployment rate has remained unchanged across the UK. The greatest rises were in Scotland (1.3 percentage points) and Wales (1.2 percentage points), while the West Midlands saw, by far, the largest year-on-year fall (-2.4 percentage points).

ILO Unemployment rate by region, Apr-Jun 2010

In April-June 2010 724,000 people aged 18-24 were unemployed (ILO measure), a fall of 6,000 on the previous quarter but a rise of 5,000 on the same quarter a year ago. The unemployment rate for those aged 18-24 is 17.5%.

920,000 people aged 24 and under were (ILO) unemployed in April-June 2010, a rate of 19.4%.

¹ The latest release is available at: <http://www.statistics.gov.uk/pdfdir/lmsuk0810.pdf>. This page is based on data from this release as well as http://www.statistics.gov.uk/OnlineProducts/LMS_FR_HS.asp (historical statistics) and NOMIS: <https://www.nomisweb.co.uk>. The figures used on this page are seasonally adjusted.

² Seasonally adjusted. The JSA data used in the remainder of this paper are not seasonally adjusted.

Employment

The number of people in employment (16 and over) rose by 184,000 over the last quarter to 29.02 million (April-June 2010); the number of people aged 16-64 in employment rose by 143,000 to 28.20 million in the same period. The employment rate for those aged 16-64 was 70.5%, 0.3 percentage points higher than the last quarter but 0.3 percentage points lower compared with the same quarter a year ago.

Over the last quarter, full-time employment rose by 68,000 while part-time employment rose by 115,000 to stand at 7.84 million. Part-time workers now account for 27% of all in employment, the highest proportion since comparable records began in 1992. Compared to the same quarter one year ago overall employment rose by 104,000, full-time employment fell by 162,000 while part-time employment rose by 265,000.

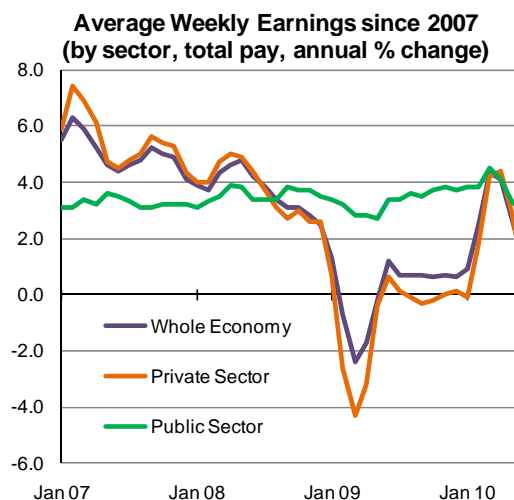

Inactivity

In April-June 2010 23.4% of those aged 16-64 were economically inactive (9.35 million), a fall of 49,000 on the previous quarter but up 172,000 compared with the same quarter a year ago. The number of people inactive due to being a student has fallen by 56,000 over the last quarter but has increased by 112,000 over the last year (a rise of 5.2%).

Vacancies and Earnings

It is estimated that there were 481,000 vacancies in the UK in the three months to July 2010, a rise of 9,000 on the previous quarter and 51,000 higher than in the same period a year ago.³

Average weekly total pay rose by 1.3% in period April-June 2010 compared to the same period a year ago; bonus pay was down by 5.8%, while regular pay increased by 1.6%.

Data for new constituencies

The majority of constituencies used in the General Election had undergone boundary changes. The availability of labour market data for these new constituencies is outlined below:

- JSA claimant count data and rates are available back to 2004.

³ This is based on a UK-wide vacancy survey; data on vacancies advertised through Jobcentre Plus is also available, and is the only vacancy indicator available at a local level. The total count of vacancies available at Jobcentre Plus in Great Britain in July 2010 was 283,683. See Section 2 for constituency level data.

- ILO unemployment, Employment and Inactivity based on the Annual Population Survey are available. Model-based estimates of ILO unemployment are being developed.
- Earnings data based on the Annual Survey of Hours and Earnings (ASHE) will not be available until the next release in November 2010.
- Annual Business Inquiry (ABI) data is available (Employee jobs).

Change in claimant count in constituencies

Between July 2009 and July 2010, 84% of constituencies saw a fall in the claimant count level (544 constituencies), while 16% recorded a rise (104 constituencies). Between June 2010 and July 2010, fewer constituencies saw a fall in the claimant count: 56% (366 constituencies) recorded a fall; 43% (277 constituencies) saw a rise.

The chart below shows the balance of constituencies that have experienced a monthly increase or decrease in the claimant count for the past year. This shows that in each of the last five months a majority of constituencies saw falls in their claimant count, although July 2010 saw fewer constituencies record a decline than in recent months. Note that these data are not seasonally adjusted and therefore do not take account of seasonal affects which can sometimes cause significant movements in the claimant count. For example, the seasonal effect associated with Christmas contributed to rises in the claimant count in almost all constituencies in January 2010.

Fewer constituencies saw JSA claimant count fall in July 2010 than in recent months

Balance of constituencies with an increase in JSA claimants (non-seasonally adjusted data)

Change in methodology for JSA claimant rates and employment rates

The tables in each month's edition of *Unemployment by Constituency* (on pages 6-44) present the following rates:

- JSA claimant 'Library rate' (tables 1a and 1b);
- JSA claimant 'ONS rate' (table 2);
- Employment rate (table 2).

From this month's edition of *Unemployment by Constituency* onwards the basis upon which these rates are calculated has changed. The denominators used are no longer based on the **working-age population** but the **population aged 16 to 64**. This is in line with new Office for National Statistics (ONS) policy.

Until this month's release of labour market statistics, the ONS used the working-age population as its basis for presenting a range of headline labour market statistical indicators.

The working-age population is defined as those aged 16 and over, but below the state pension age (65 for men and 60 for women).

However, between 2010 and 2020, the state pension age for women will gradually increase, by one month every two months, from 60 to 65. During this period the age range of the working-age population therefore changes every two months with each successive increase in the female state pension age. The resulting implications for the ONS's statistical outputs prompted it to reconsider its 'working-age' labour market indicators.

Following a public consultation and discussions with government stakeholders,⁴ the ONS decided to switch from using the currently defined working-age population (males aged 16 to 64 and females aged 16 to 59) to using the whole population aged 16 to 64 (males and females) as the basis upon which headline labour market statistical indicators are presented. This change was implemented in the [Labour Market Statistical Bulletin](#) and accompanying data releases published on 11 August 2010.

The ONS has recently published a [journal article](#) providing more information on the rationale, implementation and implications of this change.⁵

In line with this change, the basis upon which the '**Library rate**' (tables 1a and 1b) in the *Unemployment by Constituency* research paper is calculated is also changing from this edition onwards. The 'Library rate' now represents the JSA claimant count in each constituency as a percentage of the economically active population aged 16 to 64, rather than of the economically active working-age population.

Table 2 of the *Unemployment by Constituency* paper (pages 26 to 44) presents the constituency-level JSA claimant rates published by the ONS ('**ONS claimant rate**'). Prior to the August 2010 data release these were calculated as a percentage of the working-age population. As of this edition, the ONS claimant rates presented in the paper are percentages of the population aged 16 to 64. Downloads of JSA claimant data from the [ONS Nomis website](#) will also now provide rates on this basis instead of the superseded 'working-age' basis.

Finally, the **employment rate** shown in table 2 (derived from the *Annual Population Survey*) also now relates to the population aged 16 to 64 in each area rather than the working-age population.

It should be noted that as a result of this methodological change the rates shown in this month's paper **are not consistent with the rates shown in previous editions**.

Library Standard Note 5675 [Unemployment by Constituency: changes to working-age rates](#) provides further details on the change. In particular, it contains a table showing the difference between the 'Library rate' as calculated using the new and old methodology for each constituency in Great Britain. The new rates are generally slightly lower (by 0.1 percentage points on average).

⁴ [ONS public consultation on change to female state pension age and the implications for Labour Market Statistics, 2008](#)

⁵ Clegg R, Leaker D, Kent K (2010), "Implications of the change in female state pension age for labour market statistics," *Economic and Labour Market Review*, Vol 42, No 1, pp25-29.

2 Constituency data

The remainder of this paper is made up of two tables and a series of maps presenting labour market data for the current Parliamentary Constituencies. The latest available data is shown, as well as comparisons with previous years and calculations of change and rankings. Section 4 of this paper provides a detailed overview of the sources used, methodology and copyrights; notes on using the data are also included there. Users should refer to these notes when using the tables; all data and maps are covered by Crown Copyright or Ordnance Survey Copyright.

Definitions of Unemployment

Two sources of data are used to describe 'unemployment' in the UK: the claimant count and ILO unemployment. The claimant count is an administrative count of those claiming Jobseeker's Allowance (JSA). It has the benefit of being timely, accurate, available since 2004 and for low level geographies. The main problem with the claimant count is that some of those looking for work and 'unemployed' do not, or cannot, claim JSA. The JSA claimant count is therefore an indicator of unemployment rather than a perfect measure of unemployment. The standard international measure of unemployment is ILO unemployment, a survey-based measure which captures the number of people looking for and available for work within a standard definition.⁶ The main problem with this measure is that at a local authority and constituency level it has a time lag and is subject to sampling variability.

Unemployment Rates

Two 'unemployment rates' (JSA claimant rates) are shown in this paper:

- The 'Library' rate is calculated by the Library and shows the number of JSA claimants as a proportion of the estimated economically active population aged 16 to 64 resident in each constituency in 2008. This calculation attempts to capture the effect of differences in economic activity in constituencies and is not an official unemployment rate.
- The 'ONS' rate shows the number of JSA claimants as a proportion of the resident population aged 16 to 64 in 2008. Rates included in PQ answers will be based on this rate.

Rates are now available for the Northern Irish constituency boundaries which came into force this year and are presented in this month's edition for the first time.

Also shown in this paper are:

- Employment rates (based on the population aged 16 to 64)
- JSA claimants by age
- Jobcentre Plus vacancies.

The parties shown in the tables relate to incumbents after the General Election.

National, regional and constituency level labour market data is available from NOMIS: <https://www.nomisweb.co.uk/>.

This paper is intended to provide answers to requests for frequently requested data; for further analysis or to comment on the content, Members of Parliament and their staff can contact the authors.

3 - Unemployment by constituency in July 2010

Constituencies in United Kingdom

Library residence-based claimant rate, expressed as quintile groups (20% bands)

3 - Unemployment by constituency in July 2010

Selected major conurbations and surrounding areas - not to scale

Library residence-based claimant count rate, expressed as quintile groups (20% bands)

Greater London

Edinburgh and Glasgow

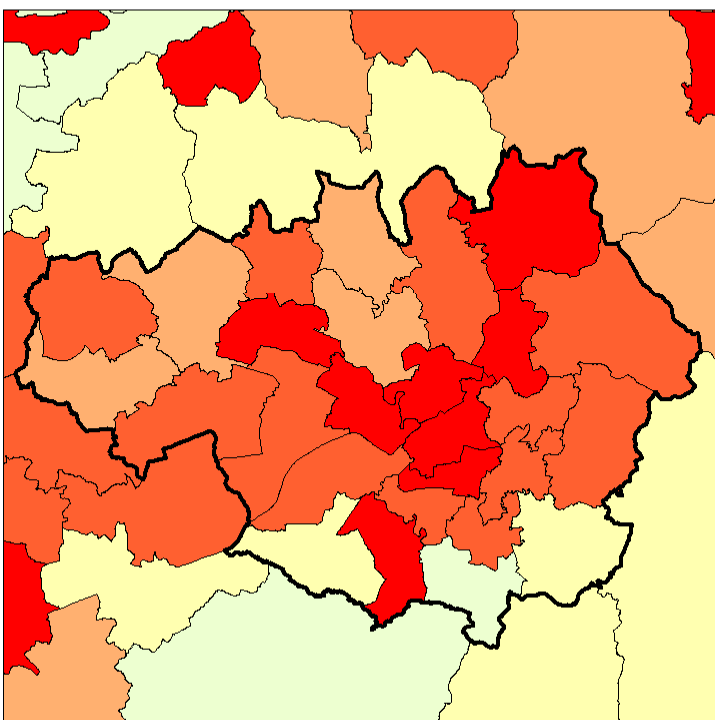

Unemployment rate

residence based claimant count

- Top quintile (7.0% to 19.5%)
- Fourth quintile (5.1% to 7.0%)
- Third quintile (3.9% to 5.1%)
- Second quintile (2.7% to 3.9%)
- Bottom quintile (1.1% to 2.7%)

Greater Manchester

West Midlands

3 - Unemployment by constituency in July 2010

Selected major conurbations and surrounding areas - not to scale

Library residence-based claimant count rate, expressed as quintile groups (20% bands)

Tyne and Wear

South Yorkshire

Unemployment rate

residence based claimant count

- Top quintile (7.0% to 19.5%)
- Fourth quintile (5.1% to 7.0%)
- Third quintile (3.9% to 5.1%)
- Second quintile (2.7% to 3.9%)
- Bottom quintile (1.1% to 2.7%)

West Yorkshire

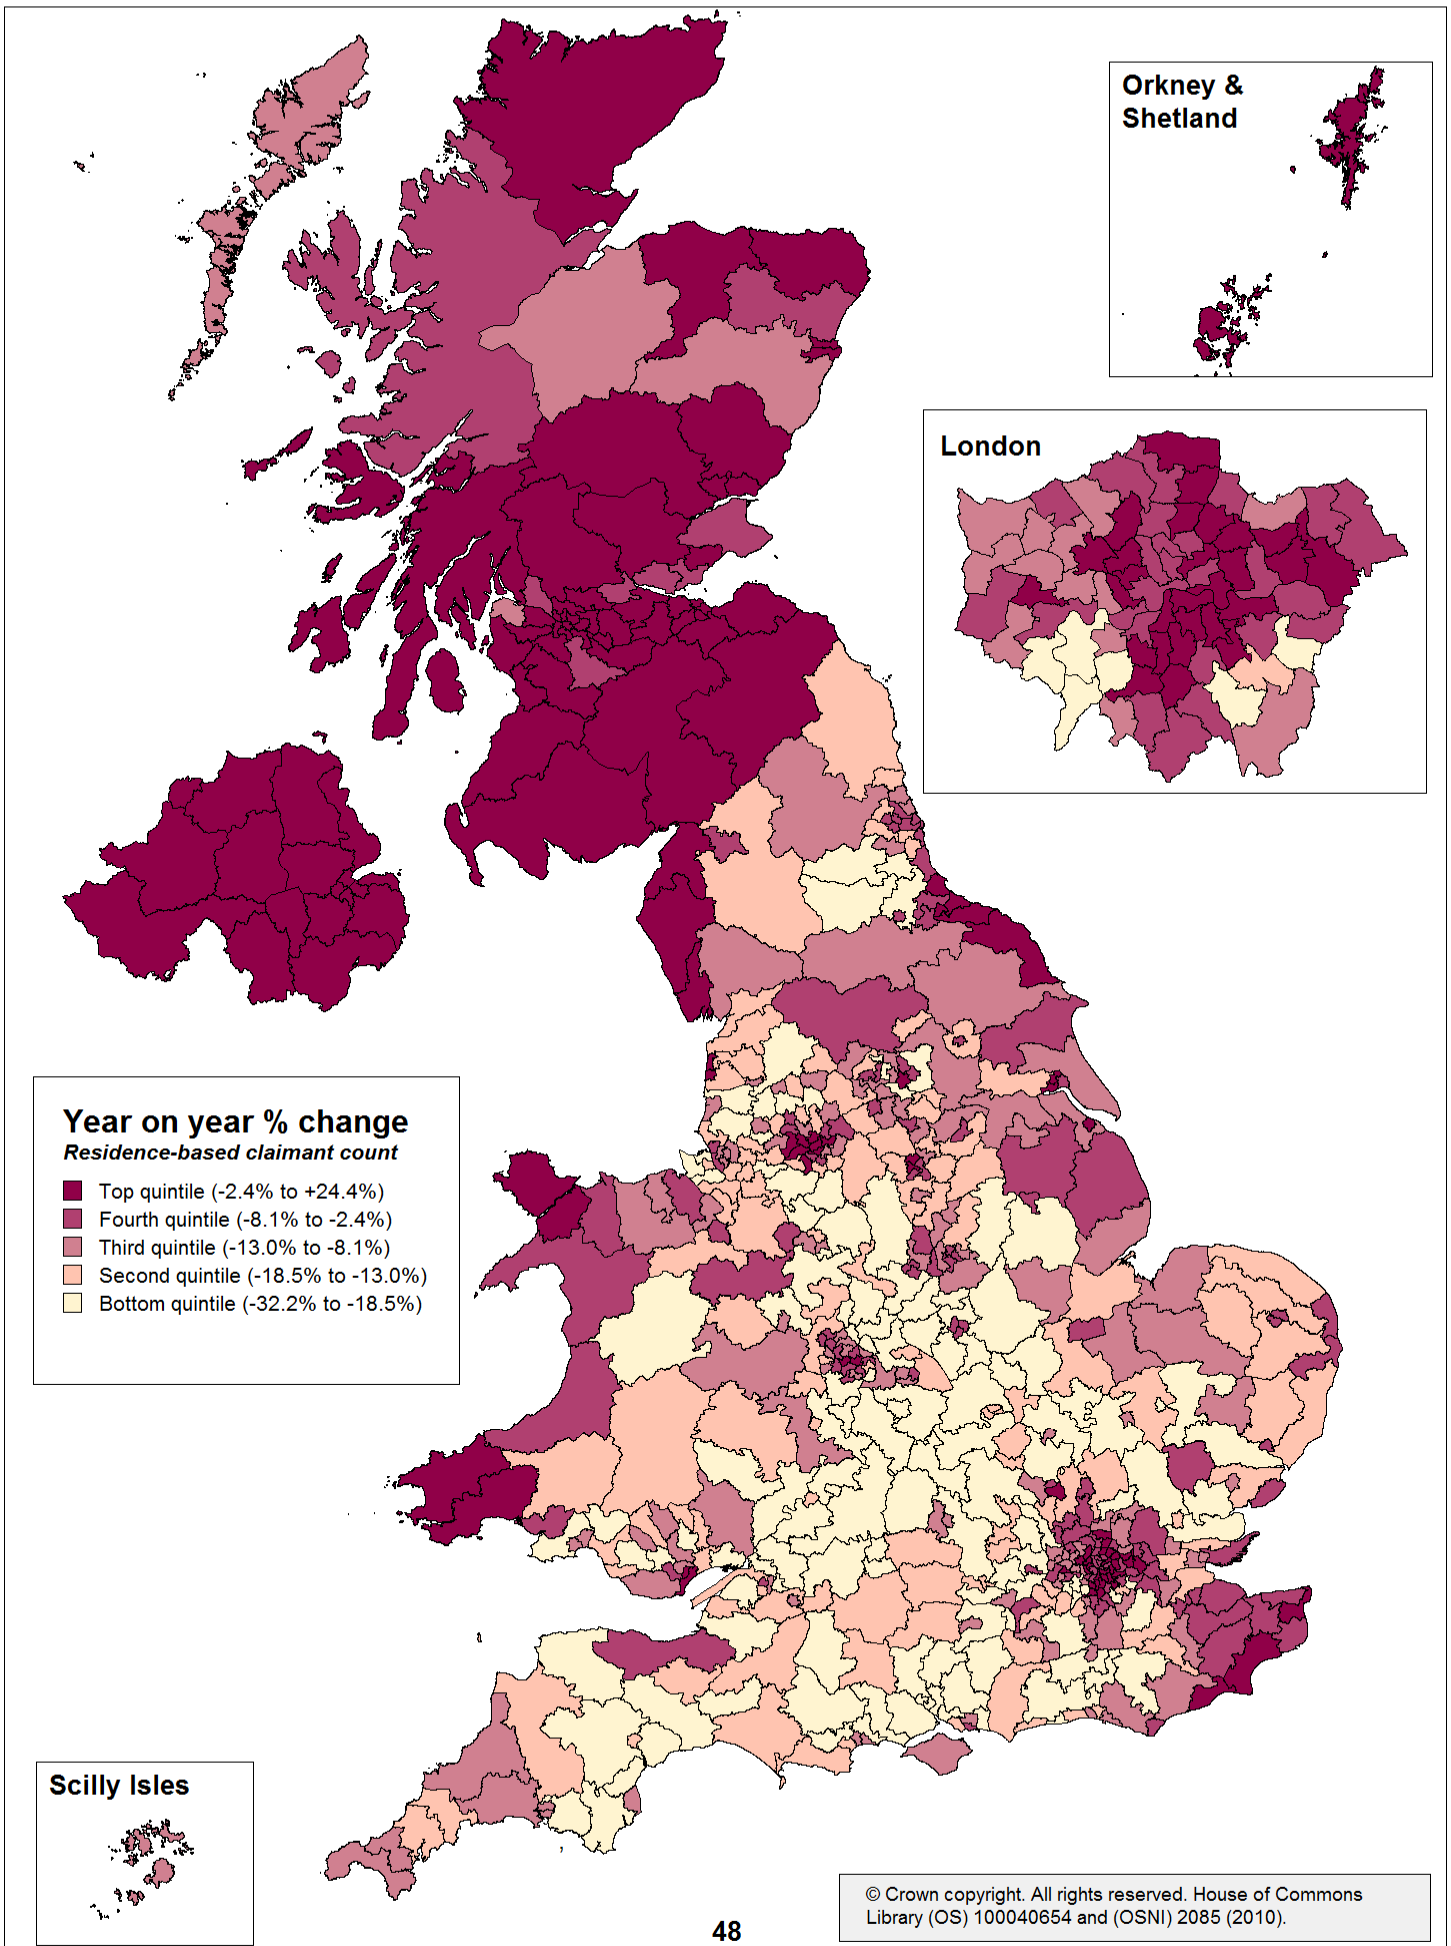

Merseyside

3 - Percentage change in claimant count

Constituencies in United Kingdom, July 2009 to July 2010

Percentage change in residence-based claimant count, expressed as quintile groups (20% bands)

4 Sources, copyright and methodology

4.1 Sources and copyright

The original source for all data in this paper is the Office for National Statistics (ONS). Changes over time, rankings, the ratio of JSA claimants to vacancies and the 'Library rate' have been calculated by the Library. The specific source for data is shown below:

- JSA claimant count: non-seasonally adjusted data, downloaded from NOMIS: <https://www.nomisweb.co.uk/>. As unemployment has a seasonal pattern, comparisons should be made using the same month in each year. Data for constituencies is available from 2004 onwards.
- Library rate is based on the Library's estimate of the resident economically active population aged 16 to 64, as outlined in section 4.2. These rates are higher than the ONS rates because they are percentages of the *economically active* population in this age range rather than the whole population in the age range (as used by ONS).
- *ONS Rate* is based on the resident population aged 16 to 64 and published alongside JSA claimant count data on NOMIS.
- *Age and duration breakdowns for JSA claimants* are also available from NOMIS.
- *Employment Rate* is based on the Annual Population Survey (APS) by ONS and is available from their website.⁷ This is a survey-based estimate and subject to sampling variability.
- *Jobcentre Plus vacancies* are available from the NOMIS website. They relate to 'live unfilled vacancies', which are vacancies notified to Jobcentre Plus and currently thought to be unfilled. A large number of vacancies are not notified to Jobcentre Plus, and the rate of notification can depend on location, occupation and industry. Data for Lincoln is affected by armed forces recruitment.

Unavailable figures are denoted in the tables by a '..'.

Claimant rates and figures on JSA claimants per vacancy are rounded to one decimal place.

The denominators used in this paper are partly derived from the 2001 Census. Census data for England and Wales are published by the Office for National Statistics. Census data for Scotland are published by the General Register Office for Scotland. Census data for Northern Ireland are published by the Northern Ireland Statistics and Research Agency. Census data are © Crown copyright.

The source of the data on claimant count and population levels contained in this publication is National Statistics (NOMIS database) © Crown copyright.

All mapping is © Ordnance Survey and Ordnance Survey Northern Ireland and **must not** be reproduced without permission

4.2 Unemployment rate methodology

Two 'unemployment rates' are shown in this paper. The 'ONS' rate is that published by ONS with the data and is calculated using the resident population aged 16 to 64 in 2008. Rates included in PQ answers will be based on this rate. The 'Library' rate is calculated by the

⁷ http://www.statistics.gov.uk/onlineproducts/lms_regional.asp

Library and shows the number of claimants as a proportion of the estimated economically active population aged 16 to 64 resident in each constituency in 2008.⁸ For an exposition of the methodology used to calculate the unemployment rates displayed in this paper see Library Standard Note *Unemployment by Constituency: change in methodology*.⁹

This methodology was updated as of the August 2010 edition when ONS changed the definition of working age to take account of the change in the state pension age for women.

The rates presented in this paper should be regarded more as a social measure of relative deprivation than as an economic measure of the mismatch between the supply of and demand for labour, as they take no account of people's ability to seek work outside the constituency in which they live.

While the Library rates are based on the latest population estimates at a constituency level, they are constrained by the use of the proportion of the population economically active in 2001. Where constituencies have seen major demographic shifts or socio-economic change since 2001 the methodology used to calculate the rates may be less accurate in fully reflecting current unemployment rates.

4.3 Map notes

The following notes should be borne in mind when drawing conclusions from these maps:

- The maps on pages 45-47 show residence-based claimant count rates for July 2010 for constituencies in the United Kingdom, with an expanded view of constituencies in selected major conurbations and surrounding areas.
- The map on page 48 shows the percentage change in residence-based claimant count levels between July 2009 and July 2010 for constituencies in the United Kingdom.
- In both maps the constituencies in the United Kingdom have been divided into five equally sized bands, also known as 'quintile groups', each of which contain approximately 130 constituencies (20% of the total in the United Kingdom). The range in each group is shown on the map, but these ranges are not equal.
- Note also that constituencies with rates near the boundaries of these quintiles will be coloured differently even though their unemployment rates may only differ slightly from those in another, neighbouring quintile group.
- Considering the percentage change does not take account of the absolute level of claimants by constituency. Constituencies with relatively low absolute numbers of claimants could see high percentage changes and vice versa.

⁸ The denominator for the rate is calculated using the proportion of the economically active population aged 16 to 64 in the 2001 census and the estimated resident population aged 16 to 64 in 2008. This means the rates take account of recent population changes but not any changes in the economically active population. Between the second quarter of 2001 and the same period in 2008 the Labour Force Survey estimates that economic activity rose by around 0.5 percentage points for the UK overall.

⁹ <http://www.parliament.uk/commons/lib/research/briefings/snep-05217.pdf>. The methodology explained in this note is the same as that used in this paper, except this paper uses the population aged 16 to 64 rather than the working age population.

4.4 Party abbreviations

The following abbreviations for parties have been used:

LAB	Labour	DU	Democratic Unionist Party
CON	Conservative	SDLP	Social Democratic and Labour Party
LD	Liberal Democrat	SF	Sinn Fein
PC	Plaid Cymru	ALL	Alliance Party
SNP	Scottish National Party	GRN	Green Party
IND	Independent	SPKR	Speaker
VAC	Vacant
