# **Economic Indicators, April 2014**

RESEARCH PAPER 14/20 01 April 2014

This paper features analysis of the latest UK and international economic indicators.

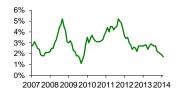

Last month saw inflation in the UK continuing to fall and a further rise in employment. Budget 2014, published in March, featured an upward revision of the OBR's GDP growth forecast, to 2.7% in 2014.

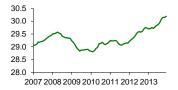

GDP grew by 0.7% in Q4 2013, following growth of 0.8% in Q3.

# Inflation (CPI) (% change on year ago)

The CPI annual inflation rate was 1.7% in February 2014, below the Bank of England's target of 2.0%.

# Employment (total, millions)

There were 30.19 million people aged 16 and over in employment in November 2013 to January 2014, up 105,000 on the quarter. The employment rate was 72.3%.

This month's articles:

- Income tax: The higher rate threshold
- Who is economically inactive?

Chris Rhodes (editor)

# 1 Introduction to Economic Indicators

*Economic Indicators* Research Papers are usually published on the first Tuesday of the month. Individual indicator pages are updated more frequently and are made available through the Library's intranet both under the relevant subject page headings, and collectively on the *Economic Indicators* subject page.<sup>1</sup>

#### **Feedback**

If you have any comments or suggestions about *Economic Indicators* please contact the editor, Chris Rhodes, on x2454.

# Weekly email alert

A weekly email alert with updated indicators is available to Members and their staff on request. To subscribe, please visit <a href="http://intranet.parliament.uk/research-online/statistics/economic-indicators/">http://intranet.parliament.uk/research-online/statistics/economic-indicators/</a>

# Sources and glossary

A guide to sources is provided in section 5. Economic terms, symbols and abbreviations used in the publication are described in the glossary in section 6.

## **Contacts**

Members and their staff are encouraged to talk to Library subject specialists. A comprehensive guide is available in *Using the Library*.<sup>2</sup> Researchers are not able to discuss pages with members of the public. For enquiries in these subject areas please contact the following specialists:

# 2 Income tax: The higher rate threshold

Despite calls from backbenchers<sup>3</sup> and Conservative Party grandees,<sup>4</sup> the Chancellor chose not to announce any further increase in the higher rate income tax threshold in Budget 2014.

In 2014/15 and 2015/16 the higher rate threshold will increase by 1%, as set out in the 2013 Autumn Statement. Taking inflation into account, this is a real terms decrease and will bring more income taxpayers and incomes into the 40% rate.

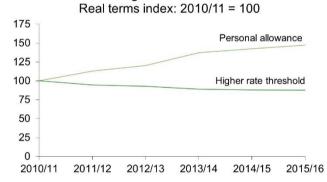

Recent changes to the higher rate threshold have been made alongside significant increases to the personal allowance (the level up to which earners do not pay income tax). Consequently tax thresholds set for 2015/16 are quite different to those that would have been

different to those that would have been in place if the Government had continued with inherited policy.5

# 2.1 Threshold changes

# Index: % change in personal allowance and higher rate threshold

Since coming to power, the Coalition Government has significantly raised the personal allowance. This policy is forecast to cost over £12bn in 2015/16, similar to the additional tax raised from raising VAT to 20%.6 To make the reform affordable the Government has focused the benefit on "those with low and middle incomes" by lowering the threshold8 at which taxpayers start paying the higher 40% rate.

By 2015/16 the higher rate threshold will be 4% lower than in 2010/11; a real terms decrease of over 10%.9

Decreases to the higher rate threshold bring more taxpayers into this tax band and, for those already paying the higher rate, increases the amount of income taxed at the 40% rate. However, all of these individuals will be benefiting from the increase in the personal allowance.

<sup>&</sup>lt;sup>3</sup> The 40p tax rate 'is killing ambition': Top Tory calls for higher threshold to help families, *Daily Mail* [online], 11 March 2014 (accessed on 28 March 2014)

# 2.2 Higher rate taxpayers and revenues

Changes to the higher rate threshold since 2010 have led to: an increase in the number of higher rate taxpayers; and an increase in revenues raised from the rate.

## Taxpayers: total

HMRC estimate that between April 2010 and April 2015, 2.2 million additional taxpayers will have been brought into the 40% rate. Current Government policies are attributed with bringing in 1.4 million of these. <sup>10</sup> By 2015/16 an estimated 5 million+ taxpayers will be paying the higher rate.

As well as increasing in number, higher rate taxpayers are increasing as a % of all taxpayers. Those paying tax at the higher rate make up an estimated 16% of

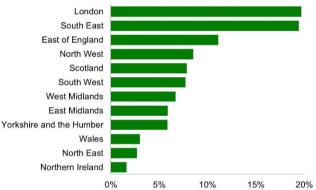

all income tax payers in 2013/14, up from 10% in 2010/11.11

# Taxpayers: by region

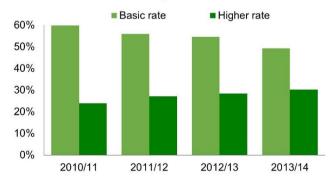

Over half of all UK higher rate taxpayers live in London, the South East and East of England.<sup>12</sup> Each of the remaining regions and countries contribute less than 10% of the total.

At least 10% of income taxpayers in each region pay the higher rate. London is home to a particularly large concentration with close to a quarter of income taxpayers in London subject to this rate.<sup>13</sup>

% of total higher rate income tax payers, 2013/14

# % of total income tax raised at basic rate and higher rate

#### Revenues

Unsurprisingly the % of income tax raised at the higher rate has increased in recent years. Income tax raised at the higher rate is up from 24% in 2010/11 to an estimated 30% in 2013/14.

Over the same period the % of income tax raised at the basic rate has decreased, from 60% to 49%. Again this is unsurprising: the income range taxable at the basic rate has shrunk due to the increased personal allowance and lower higher rate threshold.

# 3 Who is economically inactive?

Economically inactive people are not in employment but are not unemployed either, because they are not seeking work and cannot or do not want to start work. This includes students, retired people, the long-term sick and those who are looking after a family or home, amongst others.

The latest statistics published by the ONS show that there were an estimated **8.9 million economically inactive** people in the UK in November 2013 to January 2014 (most recent period for which there are data), almost four times the number of unemployed people (2.3 million) in this period.

# 3.1 Economic inactivity since 1971

The chart below shows the proportion of the population aged 16-64 that were economically inactive since 1971.

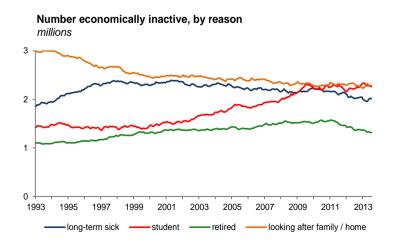

There has been a general downward trend in the economic inactivity rate over the period. The rate of 22.1% in Nov 2013- Jan 2014 is the lowest rate since 1991, and compares to a peak of 25.9% in 1983.

# 3.2 Reasons for economic inactivity

There are many reasons why people may be economically inactive. They may have previously worked but stopped looking for a job after becoming unemployed, some may never have worked, while others may be studying or have retired.

The chart below shows the number of people in the UK who were economically inactive for four of the main reasons mentioned above, since 1993 (when figures on reason for inactivity started to be collected).

Since 1993 there has been a large and sustained increase in the number of students, with a similar sustained fall in the number looking after a family or home.

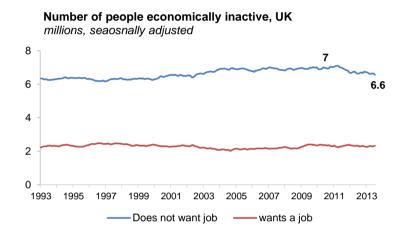

There has been a fall in the number of retired people since around 2011. This may be due to a rise in older workers and the recent increase in the female retirement age.

There has also been a gradual fall in the number of people who are long-term sick over the last decade. This may be linked to changes in assessment criteria for disability benefits.

# 3.3 Do the economically inactive want jobs?

Being economically inactive is not necessarily a negative thing. Some people, such as students or the retired, may be content to be inactive in the labour market. Alternatively, some might want to work but are unable to do so, due to sickness or caring responsibilities.

The ONS Labour Market Statistics include figures on the number of those who are economically inactive who want a job compared to those who don't want a job (based on responses to the Labour Force Survey). The chart below shows the change in these two groups since 1993.

Over the last two decades the proportion of economically inactive people who either want or do not want a job has remained fairly similar, with a large majority of the economically inactive not wanting a job over the period. However, the fall in the total number of economically inactive people since 2010 is almost entirely due to a fall in the number of people who are economically inactive and do not want jobs, from around 7 million in April-June 2010 to 6.6 million in November 2013- January 2014 (a fall of around 400,000 people). The number of people who are economically inactive but want a job has only fallen by 9,000 over the same period.

#### 3.4 Conclusion

Since 2010 the number and proportion of people who are economically inactive has decreased. This is often reported as a positive development in the context of an improving labour market, alongside increases in employment and falls in unemployment. However, as discussed above, this fall is mostly due to a change in the number of people who are economically inactive but do not want a job. Whether this is good for the people or society as a whole is perhaps a slightly more complex question than it might initially seem.

Jack Evans, Economic Policy and Statistics Section

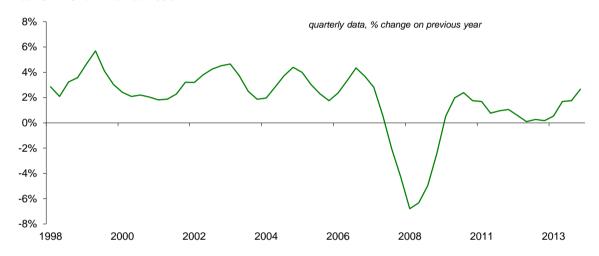

# A1: Gross Domestic Product

Estimates show the economy grew by 0.7% in Q4 2013, following growth of 0.8% in Q3 2013. Real GDP in Q4 2013 is thought to be 1.3% below its pre-recession peak. In March, HM Treasury's average of independent economic forecasts of GDP growth was 2.7% for 2014. The Office for Budget Responsibility's (OBR) central forecasts from March 2014 are for growth of 2.7% in 2014.

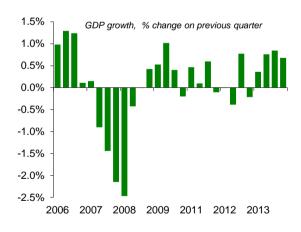

In a major revision to its GDP figures published on 27 June, the ONS estimated that the 2008-09 recession was deeper than previously thought. Though the ONS revised away the technical 'double-dip' recession between Q4 2011 and Q2 2012, other downward revisions to quarterly figures left the growth picture over the previous two years broadly unchanged.

In Q4 2013, output of the production industries increased by an estimated 0.7% compared to the previous quarter (based on chained volume measures). Construction sector output fell by 0.3%, while output of the services industry increased by 0.8%.

# A2: GDP: International Comparisons

In Q4 2013, GDP in the UK grew by 0.7% compared with the previous quarter. This was similar to the US, which grew by 0.6%, and higher than the eurozone which grew by 0.3%. Germany's economy expanded by 0.4%, while in France there was GDP growth of 0.3%.

In January 2014, the IMF raised their 2014 and 2015 growth forecasts for the UK, last made in October 2013, from 1.8% to 2.4% in 2014 and from 2.0% to 2.2% in 2015. GDP growth forecasts for 2014 were raised slightly for Germany (from 1.4% to 1.6%), the eurozone (from 0.9% to 1.0%) and the US (from 2.6% to 2.8%). Forecasts for France were left unchanged at 0.9% in 2014.

In November 2013, the OECD revised up sharply their growth forecasts for the UK to 1.4% in 2013, from their previous May forecast of 0.8%, and 2.4% in 2014, from 1.5%. 2013 forecasts for France were also revised up, from -0.3% to +0.2%, while the 2013 growth estimate for Germany was raised from 0.4% to 0.5%. The 2013 forecast for world growth was revised lower from 3.1% to 2.7%.

In February 2014, the European Commission raised their GDP growth forecasts for the UK, last made in November 2013, from 1.3% to 1.9% for 2013 and from 2.2% to 2.5% for 2014. Their growth forecast for the eurozone was left unchanged at -0.4% for 2013 and raised slightly from 1.1% to 1.2% for 2014.

# • A3: Components of GDP

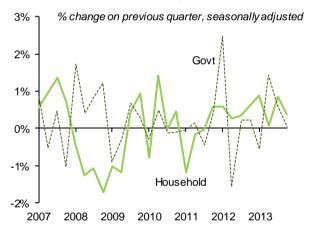

GDP can be analysed by output and expenditure. In 2012, the service sector accounted for 79% of economic output, the production sector for 15% and the construction sector for 6%. Household consumption is the largest element of expenditure, accounting for 62% of the total in 2013. Government consumption accounted for 22% and investment for 14%.

## Output by industry - gross value added

- Gross value added (GVA) measures economic output from parts of the economy such as industries or regions.
- Service sector output increased by 0.8% in Q4 2013 compared with Q3 2013 in real terms, up slightly from 0.7% in the previous quarter.
- Manufacturing output increased by 0.6%, down from 0.8% in the previous quarter.
- Construction sector output decreased by 0.2% compared with growth of 2.6% in Q3.

#### Expenditure - household and government consumption

- In Q4 2013, household consumption grew by 0.4% in real terms compared with Q3 2013.
- Government consumption was unchanged in Q4 2013 compared with the previous quarter.
   Gross fixed capital formation increased by 1.9%. Exports increased by 2.8% while imports fell by 0.4%.
- Overall GDP grew by 0.7% in Q4 2013.

## Components of GDP

% change on previous quarter (real terms)

	Household consumption	Government consumption	GFCF (a)	Exports	Imports	GDP
2012 (annual % change)	1.5%	1.6%	0.8%	1.7%	3.4%	0.3%
2013 (annual % change)	2.2%	0.7%	-0.6%	1.0%	0.5%	1.7%

# A4: Services

The service industries incorporate the retail sector, the financial sector, the public sector, business administration and cultural activities. In 2012, the service sector accounted for 79% of total UK economic output (Gross Value Added) and for 83% of jobs.

#### Services output

	Index Value	% change	% change
	(2009=100)	on month	on year
2012	102.8		1.3
2013	104.8		1.9
2013 Oct	105.5	0.1	2.1
Nov	106.1	0.5	2.6
Dec	106.2	0.2	3.1
Jan	106.6	0.4	3.2

Source: ONS, series S2KU, S222, S26Q

- Output in the service sector increased by 0.4% in January 2014 compared to December 2013. Compared with a year before, services output increased by 3.2%, the biggest annual increase since 2008.
- The biggest contributor to growth in the service sector over the year to January 2014 was the business services and finance sector.

#### Jobs in the service industries

		% change	% change
	Thousands	on quarter	on year
2011 Q3	26,147		0.8
2012 Q3	26,360		0.8
Q4	26,413	0.2	0.8
2013 Q1	26,645	0.9	0.6
Q2	26,786	0.5	1.3
Q3	26,950	0.6	2.2

Source: ONS, Workforce Jobs

- In Q3 2013 there were 27.0 million jobs in the service sector, 83% of all jobs in the UK.
- The number of jobs in the service industries increased by 164,000 over the quarter and by almost 600,000 over the year. This is the biggest annual increase in the number of service sector jobs since Q4 1999.

#### Services Purchasing Managers' Index (PMI)

	Index	Monthly change
2011 Feb	53.8	
2012 Feb	51.8	
2013 Nov	60	-2.5
Dec	58.8	-1.2
Jan	58.3	-0.5
Feb	58.2	-0.1

Source: Markit/CIPS UK Services PMI

- The Markit/CIPS UK Services PMI (an important indicator of confidence in the sector) was broadly unchanged in February at 58.2, but remains elevated by recent standards.
- Markit stated that another month of growth in the sector "means it remains the most important driver of the economic recovery."

**Update:** ONS, *Index of Services*, 28 Apr 2014 ONS, *Workforce Jobs*, 16 April 2014

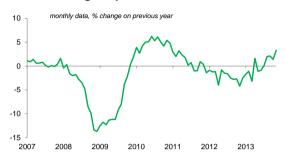

Markit/CIPS UK Services PMI, 3 Apr 2014

Contact: David Hough, x6933

# A5: Manufacturing

The manufacturing sector accounted for 10% of UK economic output (Gross Value Added) in 2012. Manufacturing is one of the production industries, which also include mining; electricity; water and waste management; and oil and gas extraction. The production industries accounted for 15% of UK output in 2012.

#### **Manufacturing Output**

	Index Value (2010=100)	% change on month	% change on year
2012	100.1		-1.7
2013	99.4		-0.7

Nov	100.3	-0.2	2.1
Dec	100.6	0.4	1.4
Jan	101.0	0.4	3.3

Source: ONS, series K22A, K27Y, K2DO

- Manufacturing output grew by 0.4% January 2014 compared with December 2013, and was 3.3% higher than in January 2013, the biggest annual increase since the year to May 2011.
- The rubber and plastics sub-sector was particularly active over the year to January 2014, with output increasing by 0.9%.

# A6: Productivity

Productivity is a measure of the efficiency of production in an economy. It is usually expressed as a ratio of units of output to units of input.

In measuring labour productivity, three measures are commonly used: output (or GDP) per worker, output per job and output per hour worked. The latter is the purest measure of productivity, as it adjusts for changes in working hours such as more part-time working.

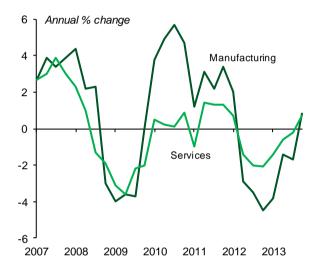

UK data are published every three months, with international comparisons updated biannually.

# **UK** productivity by sector

- Productivity across the whole UK economy, measured by output per hour, is estimated to have grown by 0.7% over the last year. Manufacturing productivity grew by 0.8% and services productivity grew by 0.7%.
- Compared with the previous quarter, productivity across the whole economy increased by 0.3%.

## Output per hour, seasonally adjusted

#### International comparisons

#### GDP per hour, 2012, index where UK=100

- International comparisons of productivity are presented as an index where the UK=100.
- In 2012, based on GDP per hour, the UK came sixth of the G7 countries, with the USA top and Japan bottom. UK productivity was 20 percentage points lower than the G7 average, the widest productivity gap since 1992.
- UK productivity declined relative to all the other G7 nations in 2012.

# **B1:** Inflation

Compared with a year ago, the Consumer Prices Index (CPI) showed inflation at 1.7% in February, down from 1.9% in January, falling below the Bank of England's 2.0% target for the second time since November 2009.

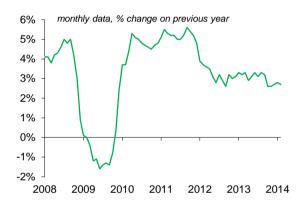

On 10 December 2003 the (then) Chancellor wrote to the Bank of England setting a new UK inflation target of 2.0%, as measured by the annual change in the CPI.

#### **Consumer Prices Index (CPI)**

- The CPI annual inflation rate was 1.7% in February, down from 1.9% in January.
- The largest contribution to the fall in the rate came from motor fuels with smaller effects from housing, household services, clothing & footwear.
   These were partially offset by increases in furniture, household goods, recreation & culture
- The RPI (all items) measure of annual inflation was 2.7% in February, down from 2.8% in January. (The RPI is no longer classified as a National Statistic because the way it is calculated does not meet the required standard.)

# **B2:** Inflation: International

UK inflation, measured by the Consumer Prices Index (CPI), remained positive throughout the recession. Other major economies, including the US, France and Germany, saw deflation (negative inflation, or falling prices).

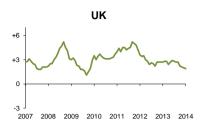

Inflation in the EU, some other European countries, and the US can be compared using the standard Harmonised Index of Consumer Prices (HICP), or the CPI as it is known in the UK. National inflation calculation methods differ from this standard to varying degrees. For example, the US' national measure is based on prices in urban areas only and unlike the HICP includes costs of owner-occupied housing. Care should therefore be taken when making comparisons between national and harmonised measures.

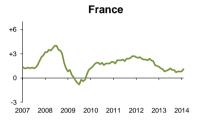

- UK inflation was 1.7% in the year to February, down from 1.9% in January. The Bank of England's UK inflation target is 2%.
- Eurozone inflation for the year to February 2014 was 0.7%, down from 0.8% in January. The European Central Bank (ECB) aims to keep inflation "below, but close to, 2% over the medium term."
- The UK had the highest annual inflation rate in the EU in February 2014 at 1.7%. The lowest annual inflation rate in the EU was -2.1% in Bulgaria, followed by -1.3% in Cyprus.
- HICP annual inflation in the US in the year to January 2014 was 1.3%, up from 1.2% in December 2013. US inflation in the year to February 2014 was 1.1% using its own national definition, up from 1.6% in January.

#### **Average Earnings in the Public and Private Sectors**

- Average weekly earnings (including bonuses) in December were £478 for the whole economy.
- Average weekly earnings (including bonuses) in the public sector were £489 in December, compared with £476 in the private sector.
- Average total weekly pay in the private sector was up 1.5% year-on-year in the three months to December, and up 0.2% in the public sector.

# Average Earnings in Services and Manufacturing

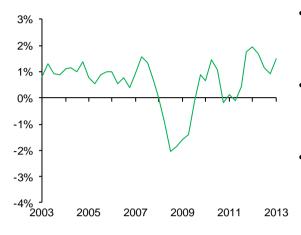

- Average weekly earnings (including bonuses) in the manufacturing sector were 2.5% higher in the three months to December than in the same period last year. In the services sector total pay grew by 1.0%.
- Average total weekly pay in the manufacturing sector was £559 in December, compared with £463 in the services sector.
- In the finance and business services sector, average weekly earnings (including bonuses) were £616 in December.

# C1: Employment

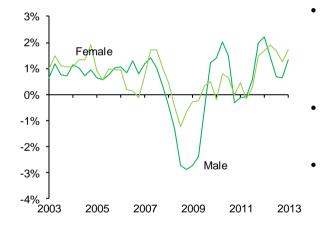

There were 30.19 million people aged 16 and over in employment in the UK in November-January 2014. The number of people in employment increased by 105,000 compared to the previous quarter and by 459,000 compared to the same period last year. The employment rate for people aged 16-64 was 72.3%. This compares to a pre-recession rate of 73.0% in March-May 2008.

## Total employment (% change on previous year)

- 16.19 million men were in employment in November-January 2014, up 85,000 on the previous quarter. Female employment increased by 20,000 over the past quarter to 14.00 million.
- The number of 16-24 year olds in employment increased by 43,000 over the quarter. There were 28,000 fewer people in employment aged 65 and over.
- 60,000 fewer people were working as employees in November-January 2014 compared to the previous quarter. 211,000 more people were selfemployed than in the previous quarter.

#### Employment by gender (% change on previous year)

- Full-time employment was up 165,000 over the past quarter to 22.11 million. 8.08 million people were working part-time, 60,000 less than in the previous quarter. This included 1.44 million people working part-time because they could not find a full-time job.
- 1.61 million people were employed on a temporary basis in November-January 2014, 24,000 more than in the previous quarter.
- The number of people working in the private sector increased by 264,000 over the quarter to November-January 2014, to 24.68 million, boosted significantly by the privatisation of Royal Mail.

# C2: Unemployment: National

The International Labour Organisation (ILO) definition of unemployment is the headline measure of unemployment in the UK. The number of people claiming Jobseeker's Allowance (JSA) and predecessor unemployment benefits is also used.

- ILO unemployment was 2.33 million people in the UK in November-January 2014, down 63,000 from the previous quarter and down 191,000 from the previous year. The unemployment rate (the proportion of economically active people unemployed) was 7.2%.
- The number of people claiming JSA decreased by 34,000 between January and February to 1.17 million people aged 18 or over, the lowest level since November 2008.

#### Unemployment, 1979 to current (seasonally adjusted levels, thousands)

#### Youth unemployment: 16-24 year olds (thousands)

- 912,000 young people aged 16-24 were unemployed in November-January 2014, down 5,000 from the previous quarter. The unemployment rate is 19.8%.
- There were 1.30 million men unemployed, down 60,000 on the quarter. 1.04 million women were unemployed, up 20,000 on the quarter.
- The number of people who have been unemployed for longer than twelve months was 828,000 in November-January 2014, a fall of 17,000 from the previous quarter and 59,000 lower than the previous year

# C3: Unemployment: Regional

The Office for National Statistics uses the International Labour Organisation (ILO) definition of unemployment as the headline measure of unemployment. The *unemployment rate* is the proportion of the economically active population who are unemployed.

• Over the period November-January 2014, the North East had the highest unemployment rate, at 9.5% of the economically active population. The lowest rate over the same period was 5.2% in the South East.

- The largest increase in the level of unemployment over the last quarter was in the North West (up 22,000).
   The largest decrease was in the South East (down 24,000).
- The (seasonally adjusted) Jobseeker's Allowance (JSA) claimant count decreased across all regions between January and February 2014.

# C4: Unemployment: International Comparisons

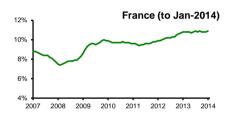

The OECD produces harmonised unemployment rates for OECD members based on the ILO definition of unemployment.

- The UK harmonised unemployment rate for Q3 2013 was 7.7%. This was below the rate of France and Italy (10.9% and 12.3% respectively) but above that of Germany (5.3%).
- In the US, unemployment fell from 7.2% to 7.0% between Q3 2013 and Q4 2013. Compared with a year ago unemployment is 0.8 percentage points lower.
- In the euro zone, unemployment fell by 0.1 percentage point to 12.0% from Q3 2013 to Q4 2013.
- Spain and Greece have the highest harmonised unemployment rate among the 33 OECD member states (26.1% in Q4 2013 and 27.3% in Q3 2013 respectively). South Korea had the lowest unemployment rate in the OECD in Q4 2013, at 3.0%.
- Youth (15-24) unemployment is a major issue in many developed economies at present. In Q3 2013 youth unemployment was 56.5% in Spain and 58.0% in Greece. In the same period UK youth unemployment stood at 20.8%.

<sup>\*</sup> latest figure refers to quarterly survey conducted over Oct-Dec 2013

# D1: Interest Rates and the Money Supply

Latest official interest rates from the UK, eurozone and the US are shown on this page. A summary of the Bank of England's quantitative easing policy and latest money supply data in the UK are also provided.

#### Official interest rates

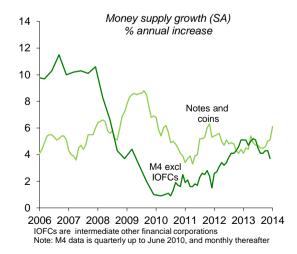

- In consecutive monthly meetings from October 2008 to March 2009, the Bank of England cut the official Base Rate from 4.5% to 0.5%, the lowest since the Bank was founded in 1694. The rate has remained at 0.5% since March 2009.
- On 6 August 2013, the Governor of the Bank of England issued 'forward guidance' on the future path of interest rates, stating that the Bank "intends not to raise the Bank Rate from its current level of 0.5% at least until the [ILO] unemployment rate has fallen to a threshold of 7%." With unemployment falling more quickly than expected towards the threshold, on 12 February 2014 a second 'phase' of forward guidance was announced. It was indicated that the MPC would delay raising interest rates until it believed spare capacity in the economy had been reduced, and then only do so at a gradual rate
- On 7 November 2013, the Governing Council of the European Central Bank agreed to lower the main interest rate for the eurozone from 0.5% to 0.25%, where it has remained since.
- The US Federal Reserve's target range for the federal funds rate has been 0-0.25% since 16 December 2008. Between September 2012, and December 2013, it purchased assets (quantitative easing) at a rate of around \$85bn per month. On 18 December 2013, the Federal Open Market Committee decided to slow this rate of asset purchases by \$10bn at each of its meetings. Thus at its January meeting, the Fed reduced its rate of asset purchases from \$75bn to \$65bn per month.

## Quantitative easing in the UK (asset purchase programme)

- With little room for further cuts in interest rates, the Bank of England initiated an asset purchase or 'quantitative easing' (QE) programme in March 2009.
- From an initial £75bn in March 2009, QE was increased by £125bn (to a total of £200bn) by November 2009. It was further increased as follows: up by £75bn (to £275bn) in October 2011; £50bn (to £325bn) in February 2012 and £50bn in July 2012 to a total of £375bn.
- The majority (over 99%) of assets purchased by the Bank of England though QE have been gilts (UK Government securities).

#### Money supply

- In its February 2014 Inflation Report, the Bank of England noted that money supply growth remained 'robust' throughout, even though no quantitative easing had been undertaken over this period. The growth was driven predominantly by household deposits, particularly 'sight' (i.e. instant access) deposits. However, business deposits increasingly contributed to money supply growth during the second half of 2013.
- Annual growth in M4 excluding intermediate other financial corporations (a measure monitored by the Bank of England Monetary Policy Committee) was 3.7% in December 2013, down from 4.3% in November.
- The value of notes and coins in circulation outside the Bank of England rose by 6.1% in January 2014 compared with a year ago, up from 5.1% in December 2013.

# D2: Public Finances

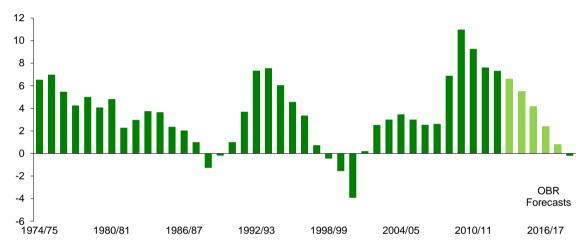

The independent Office for Budget Responsibility (OBR) revised down their forecasts of borrowing and debt in Budget 2014. The OBR now forecasts that public borrowing will be £108 billion in 2013/14 (7% of GDP) and Government debt will total £1.3 trillion (75% of GDP).

- Over the period April 2013 to February 2014, public sector borrowing was £99.3 billion, £4.4 billion lower than the same period in 2012/13.
- Net borrowing is forecast to fall from £108 in 2013/14 to £17 billion in 2017/18, before a budget surplus is recorded in 2018/19, of £5 billion.
- Public sector net debt (the stock of Government borrowing) is forecast to be 74.5% of GDP in 2013/14, rising to 78.7% in 2015/16, before falling back to 74.2% in 2018/19.

# Public sector net debt (% of GDP)

# D3: Financial Indicators

The FTSE-100 tracks share-price movements in the 100 largest companies by market capitalisation listed on the London Stock Exchange. It hit an all-time high of 6,930 in December 1999. It approached those highs again in 2007, before falling sharply in 2008. In May 2013 it reached its highest point since September 2000.

The price of Brent crude oil reached an all time high above \$145/barrel in July 2008. The price fell below \$100/barrel in June 2012 for the first time since February 2011, but has remained above \$100 since July 2012.

The nominal price of gold exceeded \$1,800/ounce for the first time in August 2011, but the metal's price has since moderated considerably.

# E2: Exchange rates

The Sterling Exchange Rate Index (SERI) measures sterling's value against a 'basket' of currencies, 'trade-weighted' (based on currencies' relative importance in UK trade).

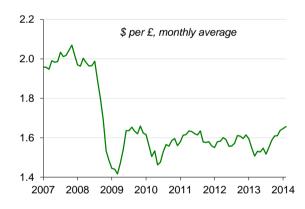

The SERI rose by 0.4% in February 2014, following a rise of 1.2% in January. Compared with the same period a year ago, it is 7.6% higher. It is currently 11.3% above its March 2009 level, when it was at its lowest point since the series began in 1980. It is 18.7% below its pre-recession peak in July 2007.

#### Sterling Exchange Rate Index (SERI)

#### **US\$/£** Exchange Rate

- On average in February, the pound was one cent higher against the dollar than in January. At the 14 March market close the pound stood at \$1.66, one cent above the February average.
- Sterling was unchanged against the Euro in February compared to January.
- At the 14 March market close the pound stood at €1.19, two cents below the February average. This compares with an all-time low of €1.02 (on 30 December 2008), and a launch rate of €1.48 on 31 December 1998.

# F2: Retail Sales

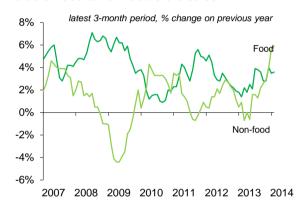

Retail sales are an indicator of household consumption. A number of retail sales surveys are conducted, for instance by the CBI. This page uses official data from the Office for National Statistics.

#### Value of retail sales

- The value of retail sales in the three months to February 2014 was 4.6% higher than the same three months in the previous year.
- The value of retail sales in February 2014 alone was 4.7% higher than in February 2013.
- The value of retail sales in the whole of 2013 was 2.6% higher than in 2012.
- Internet sales were estimated to account for 10.7% of the value of all retail sales (excluding vehicle fuels) in February 2014. The value of internet sales was 12.2% higher than in February 2013.

#### Value of food & non-food store sales

- The value of sales in food stores in the three months to February 2014 rose by 3.6% on the same period last year, and the value of sales in non-food stores increased by 5.9%.
- The value of sales in household goods stores increased by 3.6% in the three months to February compared with the previous year – the second month of year-on-year growth for these stores since mid-2012.

# F3: Housing Market

House prices on the Nationwide index rose by 0.6% in February after a 0.7% rise in January. Prices were 9.4% higher compared with a year ago on this measure. House prices on the Halifax index rose by 2.4% in February following a 1.1% fall in January. Prices were 7.9% higher than a year ago on this measure.

Numbers of mortgage approvals have started to pick up in recent months but still remain well down on prerecession levels. Housing starts have increased since the recession but still remain well below pre-recession levels.

## House price indices

Halifax house price index

Latest monthly data
UK, seasonally adjusted

	Halifax	Nationwide
Latest data	Jan-14	Feb-14
Change in month Change in year	+2.4% +9.9%	+0.8% +9.4%
Peak date Change since peak	Aug-07 -14.8%	Oct-07 -8.1%
Trough date Change since trough	Apr-09 +10.0%	Feb-09 +14.0%

#### Nationwide house price index

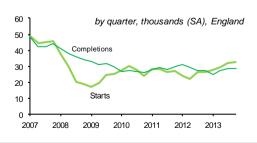

- Average house price growth has accelerated in recent months. In February 2014, the average house price on the Nationwide measure was just over £177,846.
- There is considerable regional variation. In Q3 2013 prices rose by 10% in London but were unchanged in the far north of England compared with a year earlier (Nationwide data).

#### Mortgage approvals

- Bank of England data on the number of mortgages approved to finance house purchases are a leading indicator of house sales.
- There were 76,947 mortgage approvals in January 2014, a six year high. Approvals were 6% higher than in December and 42% higher than January 2013.

# House-building

- There were 32,320 house building starts in England in Q4 2013, 1% less than in Q3 2013 and 23% more than in Q4 2012. This is above the low of 14,470 in Q1 2009, but still well below the 48,910 starts in Q1 2007.
- There were 28,510 dwelling completions in Q4 2013, down 1% from 28,770 in Q3 2013, and 5% lower than the number of completions in Q4 2012. This is still below the peak of 48,450 completions in Q1 2007.

# F4: Household debt

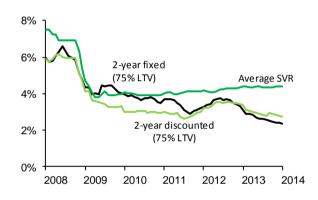

#### Monthly net lending, £bn

Data on lending to individuals is published on a monthly basis and is seasonally adjusted.

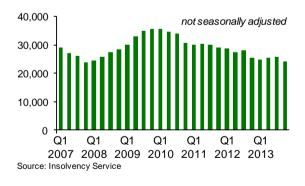

- Total net lending to individuals (excluding student loans) was £2.1 billion in January 2014. Net lending has been relatively low since mid-2008, but grew through most of 2013.
- Monthly net unsecured lending (consumer credit) was £0.7 billion in January. Monthly net secured lending (mortgages) was £1.4 billion.

## Current average mortgage interest rates

- The average Standard Variable Rate (SVR) has changed little over the past year in January 2014 it was 4.41%, compared with 4.38% the year before.
- In contrast fixed-term mortgage rates have generally been falling since mid 2012 the average 2-year fixed mortgage rate was 2.37% in January, compared to 3.11% the year before. The average 2-year variable rate was 2.76% in January (compared with 3.36% the year before). These figures are for a loan to value ratio of 75%.

#### Individual insolvencies, England and Wales

- There were 24,282 individual insolvencies in England and Wales in Q4 2013, a 4.6% decrease on a year earlier. These figures are not seasonally adjusted and are a provisional estimate.
- In Scotland in Q4 2013 there were 3,335 individual insolvencies, a decrease of 13.7% on Q4 2012.
- In Northern Ireland in Q3 2013 there were 926 individual insolvencies, an increase of 22.5% on Q4 2012.

and Development

**ONS** Office for National Statistics

#### Definitions1

**Balance of payments:** A country's financial position, with other countries of the world, comprising two parts:

**Current account:** the balance of imports and exports of goods and services, income and transfers combined:

**Capital account:** the difference between a country's capital invested in other countries, and the capital invested by other countries in it.

Technically, the two parts always balance. A balance of payments deficit normally refers to a current account deficit.

**Balance of trade:** The difference between a country's exports and imports of either goods only or goods and services combined. Trade in financial services account for around a third of UK exports, and thus partially offsets trade in goods deficits.

**Basic prices:** Prices excluding taxes and subsidies on products.

**Claimant count:** The number of people claiming Jobseeker's Allowance (JSA) benefits.

Consumer Prices Index (CPI): This is the headline UK domestic measure of inflation. It measures the average change from month to month in the prices of consumer goods and services purchased in the UK.

Current account balance: The difference between receipts/payments due to transactions in goods, services, income and transfers between the UK and all other countries. A current account deficit means that total payments exceed total receipts; in the reverse case, the current account is in surplus.

**Current budget:** Measures the balance of public sector current account revenue over public sector current expenditure.

**Current/constant prices:** Current prices are the actual or estimated recorded monetary value over a defined period for a group of industries or products. They show the value for each item expressed in terms of the prices of that period.

Constant prices refer to volume measures whose values are derived by applying to current quantities, prices for a specific base period. They allow figures to be represented so that the effects of inflation are removed. The values for each time period are expressed in terms of the prices in a particular base period.

**Economically active:** Those aged 16 and over who are either in employment or unemployed.

**Economically inactive:** Those aged 16 and over who are neither in employment nor unemployed. This includes those who do not want a job, those who want a job but have not been seeking work in the last four weeks and those who want a job and are seeking work but not available to start work.

**Employment:** The number of people with jobs as estimated by the Labour Force Survey (LFS). This includes all people aged 16 or over who did paid work, those who had a job that they were temporarily away from, those on government supported training and employment programmes, and those doing unpaid family work during the survey period. The employment rate refers to the number of people employed as a percentage of the working age population as measured by the LFS.

**Exchange rate:** The rate at which one currency is traded against another.

Gross Domestic Product (GDP): The total market value of goods and services produced after deducting the cost of goods and services used up in the process of production (intermediate consumption) but before deducting consumption of fixed capital (depreciation).

**Gross Domestic Product – Real GDP:** Also known as constant price or chained volume measure, this is a measure used to indicate change in the actual quantity of goods and services produced, by adjusting for inflation.

Gross Fixed Capital Formation (GFCF): Expenditure on fixed assets (buildings, vehicles etc.) either for replacing or adding to the stock of existing assets. Business investment is GFCF by the private sector and public corporations on transport equipment, other machinery and equipment and new dwellings and structures other than dwellings.

Sources: ONS, HM Treasury, HM Revenue and Customs, Finance-Glossary.com.

Gross Value Added (GVA): The difference between output and intermediate consumption for any given sector/industry. That is the difference between the value of goods and services produced and the cost of raw materials and other inputs which are used up in production. GVA is used to measure the productivity of sectors/industries and economies.

Harmonised Indices of Consumer Prices (HICP): Harmonised indices of consumer prices for Member States of the European Union, which enable comparisons to be made across countries. The UK's CPI measure uses HICP methodology.

**Market prices:** The prices actually paid by the purchaser for goods and services, including transport costs, trade margins and taxes. GDP at market prices = GDP at basic prices + transport prices paid separately + non deductible taxes on expenditure - subsidies received.

**Money supply:** The total amount of money in an economy at a given time.

The Public Sector Net Borrowing (PSNB): This measures the public sector's accumulation of debt net of liquid financial assets. Its approximate stock equivalent is net public sector debt.

**Public Sector Net Debt:** This is approximately the stock analogue of the PSNB. It measures the public sector's financial liabilities to the private sector and abroad, net of short-term financial assets such as bank deposits and foreign exchange reserves.

Retail Prices Index (RPI): A domestic indicator of inflation. It measures the average change from month to month in the prices of goods and services purchased in the UK. It is similar to the CPI, but differs in terms of methodology and coverage. For example, the RPI includes housing costs such as mortgage interest payments while the CPI doesn't.

**Seasonally adjusted:** Estimates in which the element of variability due to seasonal influences, which may distort the data, has been removed.

Sterling Exchange Rate Index (SERI): This measures the value of sterling against a tradeweighted 'basket' of other currencies. The weights used in this index measure currencies' relative importance to UK trade in goods and services.

**UK Base/Repo rate:** The rate at which the Bank of England lends to discount houses by buying their bills. The base rate is usually the minimum rate at which banks are prepared to lend money. The high street bank base rate follows that set by the Bank of England, and it acts as the benchmark for *[cont]* 

other interest rates, including mortgages and personal loans.

**Unemployment:** The ILO definition includes all people who are: out of work, want a job, have actively sought work in the previous four weeks and are available to start work within the next fortnight; or are out of work and have accepted a job that they are waiting to start in the next fortnight.

**Unemployment rate:** The number of unemployed persons expressed as a percentage of the total economically active population.

**Volume/value of retail sales:** The volume of retail sales is the total takings adjusted for inflation and the value of retail sales is the total actual takings.

**Workforce jobs:** The sum of employee jobs, selfemployment jobs, those in HM Forces and government-supported trainees.
