The police have a variety of legislative powers to stop and search those they suspect have certain items. Their stop and search powers allow them to “allay or confirm” their suspicions without making an arrest.

There are three types of stop and search powers:

- powers which require officers to have “reasonable grounds” to conduct the search, sometimes known as ‘section 1’ searches;
- a power which allows officers to search without reasonable grounds, sometimes known as ‘no suspicion’ or ‘section 60’ search. This power can only be used when authorised by a senior officer based on certain ‘pre-conditions’.
- a power officers can use to search those they ‘reasonably suspect’ are terrorists. This terrorism power is not discussed in this briefing.

Officers must use a specific legislative power every time they carry out a stop and search. They must use the correct power for the circumstances of each search. They cannot rely on someone’s consent alone to search them.

The Home Office maintains statutory guidance on the most frequently used stop and search powers in PACE Code A. The College of Policing (the body responsible for professional standards in policing) maintains an Authorised Professional Practice (APP) on stop and search. All English and Welsh police forces have subscribed to follow, at least in part, additional Home Office guidance on the best use of stop and search.

Use of stop and search

Police forces have reduced their use of stop and search over the past ten years, but the number of searches has recently increased. Around 577,000 searches were conducted in 2019/20. 58% fewer than in 2009/10 but 52% higher than in 2018/19.

The reduction in the use of stop and search was the result of reforms bought forward between 2013 and 2016. At the beginning of the 2010s there were concerns that the police were overusing their stop and search powers and conducting poorly targeted searches. This was resulting in some ineffective and unlawful use of stop and search. Reforms were introduced to police guidance which encouraged forces to ensure their use of stop and search was based on robust intelligence and information.

The current Government and policing leaders have argued that stop and search should form part of the response to violent crime. The Home Office has relaxed voluntary guidance on the use of pre-condition
search introduced during the 2013-2016 reform period and encouraged forces to use their search powers more frequently.

The use of pre-condition search has increased markedly over the last three years. Most searches are conducted using reasonable grounds powers (97% in 2019/20) but the number pre-condition searches increased from 622 in 2016/17 to 18,081 in 2019/20. Pre-condition searches accounted for around 5% of the overall increase in the use of stop and search between 2017/18 and 2020/19.

**Tactical use**

A small number of forces conduct most stop and searches. The Metropolitan Police Service (MPS) conducted almost half of all searches in 2019/20 (48%). 64% of all searches were conducted by just five forces: the MPS, Merseyside, West Midlands, Essex and South Yorkshire.

Most searches are conducted to find drugs. Around 63% of all reasonable grounds searches were conducted to find drugs in 2019/20 with around 16% conducted to find offensive weapons. In its February 2021 spotlight report on the disproportionate use of stop and search and the use of force, Her Majesty’s Inspectorate of Constabulary and Fire & Rescue Services (HMICFRS) found that drug searches contributes to “ethnic disproportionality” in stop and search rates “despite evidence that there is no correlation between ethnicity and rates of drug use”. HMICFRS says the high prevalence of drug possession searches indicates that “enforcement efforts are not being effectively focused on force priorities”.

**Fair use?**

Evidence suggests that police practice did improve during the 2013-16 reform period. However, recently police watchdogs (including HMICFRS and the Independent Office for Police Conduct) have raised concerns that some searches are not conducted lawfully and effectively. In February 2021 HMICFRS published findings of a review of 9,378 search records. 14% of those records had “recorded grounds that were not reasonable”. The inspectorate said the “vast majority” of search records had weak recorded grounds (80%). HMICFRS has repeatedly called on forces to do more to monitor and scrutinise their use of the powers.

**Impact of stop and search**

Those in policing claim that when stop and search is targeted and conducted in line with the law and guidance, they can confiscate dangerous and prohibited items without undermining public trust in the police. Those opposed to stop and search argue that a history of poor use demonstrates it is a fundamentally flawed police power. They note that the long-standing disparity in the search rate by ethnicity continues to ensure that Black and Minority Ethnic (BME) people are disproportionately affected by the negative effects of stop and search.

BME people were four times more likely to be searched than white people in 2019/20. The difference was particularly pronounced for black people, who were nine times more likely to be searched than white people. HMICFRS says no force “fully understands the impact of the use
of [stop and search] powers” and “no force can satisfactorily explain why” ethnic disproportionality persists in search records.

Poorly targeted and conducted stop and search is widely acknowledged to damage police community relations, whilst evidence regarding the impact of stop and search on crime is mixed. There is little evidence to suggest that stop and search provides an effective deterrent to offending. Stop and search is more effective at detecting criminals, but most searches result in officers finding nothing. Only around 20% of searches in 2019/20 resulted in a criminal justice outcome (an arrest or out of court disposal) linked to the purpose of the search.
1. Powers

Police officers\(^1\) have a variety of legislative powers to stop and search those they suspect have certain items. Their stop and search powers allow them to “allay or confirm” their suspicions without making an arrest.\(^2\)

There are three types of stop and search powers:

- powers which require officers to have **“reasonable grounds”** to conduct the search, sometimes known as ‘section 1’ searches;
- a power which allows officers to search without reasonable grounds, sometimes known as ‘no suspicion’ or ‘section 60’ search. This power can only be used when authorised by a senior officer based on certain **“pre-conditions”**.
- a power officers can use to search those they ‘reasonably suspect’ are terrorists.\(^3\) This **terrorism power** is **not** discussed in this briefing.

Officers must use a specific legislative power every time they carry out a stop and search. They must be able to demonstrate they used the correct power for the circumstances of each search. They cannot rely on someone’s consent alone to search them.\(^4\)

The Home Office maintains statutory guidance on the most frequently used stop and search powers in **PACE Code A**.\(^5\) The College of Policing (the body responsible for professional standards in policing) maintains an Authorised Professional Practice (APP)\(^6\) on stop and search. All English and Welsh police forces have also subscribed to follow, at least in part, additional Home Office guidance on the **best use of stop and search**.

1.1 Reasonable grounds searches

The vast majority of stop and searches are conducted using reasonable grounds powers.\(^7\) There are numerous statutory provisions which give police officers powers to search people with reasonable grounds.\(^8\) These powers are sometimes collectively known as ‘section 1 searches’ after **section 1** of the **Police and Criminal Evidence Act 1984** (PACE).

---

\(^1\) Stop and search is one of several police powers reserved for police officers. However, PCSOs may have powers similar to stop and search. For example, they may have been designated powers which allow them seize items being used to conduct anti-social behaviour. See: House of Commons Library, Police powers: an introduction, March 2020, section 1.

\(^2\) Home Office, **PACE Code A**, para 1.4

\(^3\) **Part V, Terrorism Act 2000** [as amended]

\(^4\) Home Office, PACE Code A, para 1.5

\(^5\) **s66, Police and Criminal Evidence Act 1984**

\(^6\) APP is official police guidance. Police officers are expected to have regard to APP when on duty. However, there may be circumstances in which it would be legitimate for them to deviate from it. See: House of Commons Library, **Introduction to police powers**, section 1.3

\(^7\) See **section 2** of this briefing for statistics

\(^8\) See: College of Policing, APP stop and search: **legal basis**, section 2 [last accessed 10 June 2020]
Commonly used reasonable grounds powers

Section 1 of PACE and section 23 of the Misuse of Drugs Act 1971 are the most commonly used reasonable grounds stop and search powers.

Section 1 of PACE (as amended) allows officers to stop and search those they have reasonable grounds to suspect have “stolen or prohibited articles”.\(^\text{9}\) For the purposes of section 1 “prohibited articles” means offensive weapons, fireworks and any item that has been made or adapted to be used in a burglary, theft or fraud or to cause criminal damage.\(^\text{10}\)

A similar power in the Firearms Act 1968 (as amended) allows officers to stop and search those they have “reasonable cause” to suspect have a firearm or ammunition in a public place.\(^\text{11}\)

Section 23 of the 1971 Act (as amended) allows officers to search those they have reasonable grounds to suspect have “controlled drugs”, those drugs that are illegal to produce, supply and possess under the 1971 Act.\(^\text{12}\)

What are reasonable grounds?

Officers have reasonable grounds when they have a “genuine suspicion” they will find the object they are searching for. This suspicion must be based on “objective factors”.\(^\text{13}\)

There is no definitive list of “objective factors” on which to base a search. Ultimately, it is for the officer conducting the search to be satisfied it has an objective basis. However, objective factors generally fall into one of two categories:

- **Intelligence or information.**\(^\text{14}\) For example, the fact that a person matches the description of a suspect in a nearby burglary; or that a gang known to be involved in violent crime is meeting at a specified place for criminal purposes.

- **Suspicious behaviour.**\(^\text{15}\) For example, attempting to hide or discard something, behaving nervously, or being seen with something that looks like a controlled drug.

The smell of cannabis is sometimes used as an objective factor on which to base a search.\(^\text{16}\) Using the smell of cannabis as the sole basis for a search has not been tested in the courts and therefore smelling cannabis can constitute a legal basis for a search on its own.\(^\text{17}\) However, there are concerns that basing searches on the smell of cannabis alone is ineffective and may be contributing to disproportionate rates of stop

and search by ethnicity. Officers are therefore advised to only search people they can smell cannabis on when they have additional objective factors on which to base their suspicion.

What are not reasonable grounds?

There are certain things never considered to be an objective factor on which to base a reasonable grounds search.

“Personal factors” can never constitute an objective basis on which to base a search. Officers cannot base a search on them, nor can they use them to support another factor. Personal factors include:

- someone’s physical appearance (accept where is matches the description of a relevant suspect),
- an individual’s known past convictions,
- any protected characteristic (age, disability, gender reassignment, pregnancy race, religion, sex and sexual orientation),
- generalisations or stereotypes about groups of people.

An officer’s hunch or instinct is not an objective factor on which to base a reasonable grounds search.

Officers can question individuals as part of a stop and search encounter, but they have no powers to require people to answer them. Information volunteered to officers during a stop and search encounter can confirm or dispel an officer’s suspicions. However, officers cannot search someone based solely on their answers (or their refusal to answer) because they must have reasonable grounds to initiate a stop and search encounter.

1.2 Pre-condition searches

There is a power which allows officers to search people without reasonable grounds. This power is sometimes known as ‘no suspicion search’ or ‘section 60 search’ after the legislation which gives officers this power: section 60 of the Criminal Justice and Public Order Act 1994 (as amended). Those in policing often call these searches ‘pre-condition searches’ because section 60 of the 1994 Act requires specific pre-conditions to be met before senior officers can authorise their use.

Pre-condition search is a highly controversial stop and search power. Those against its use argue it is ineffective, open to abuse and particularly harmful to police community relations. Those in favour of its use argue it allows the police to better respond to violent crime. The current Conservative Government has encouraged the use of pre-condition search as part of its policy on tackling violent crime.

22 Ibid
23 See: The Guardian, Police accused of abusing easier stop and search, 14 April 2019
24 See: section 2.3 of this briefing
Section 60 of the 1994 Act was challenged at the Supreme Court on human rights grounds in 2015. The Supreme Court unanimously found that safeguards present in both legislation and guidance ensures pre-condition search can be compatible with the right to privacy.\(^{25}\) However, this challenge highlighted the risks of human rights violations when officers deviate from legislation and guidance.\(^{26}\)

**When can pre-condition searches be used?**

Pre-condition search gives the police an additional search power they can use in response to serious violence. Pre-condition search is designed to help the police confiscate weapons before a violent incident takes place or recover weapons used in a recent violence. The police should only use pre-condition search when their reasonable grounds search powers would not recover weapons associated with violence.\(^{27}\)

Uniformed officers can conduct pre-condition searches when authorised by an officer of at least the rank of inspector.\(^{28}\) Authorisations can initially last for up to 24 hours with superintendents having the power to authorise extensions up to 48 hours.\(^{29}\) Whilst senior officers may authorise pre-condition search for up to 48 hours at a time they are required to authorise it’s use for a shortest period necessary.\(^{30}\)

Pre-condition search can be authorised when senior officers “reasonably believe” that one of the following conditions has been met:

- incidents involving serious violence “may” take place in a locality and that it is “expedient” to give authorisation;\(^{31}\)
- an incident involving serious violence has taken place, the weapon used is in a locality and it is “expedient” to give authorisation to find it;\(^{32}\) or
- people are carrying dangerous instruments or offensive weapons in a locality.\(^{33}\)

A senior officer’s reasonable belief that one of the above conditions has been met must be based on objective factors.\(^{34}\) Senior officers should therefore rely on information and intelligence when deciding to authorise pre-condition searches. For example, senior officers may authorise pre-condition searches if they have intelligence that rival gangs are planning to meet in a specified place. Senior officers should

clearly communicate to those patrolling why they have authorised pre-condition searches.  

**What areas can be designated for pre-condition searches?**

Senior officers can authorise the use of pre-condition searches in a “locality” within their police force area in which the above conditions have been met. Authorising officers should designate the smallest area necessary to achieve the required results. They should clearly identify the area designated through identifiable boundaries.

Some have argued that the authorisation of pre-condition searches across whole London boroughs is ineffective and risks interfering with the human rights of residents.

The Metropolitan Police Service (MPS) has released information on the geographic extent of their pre-condition search authorisations through responses to questions to the London Mayor and FOI requests. The most recent information readily available shows that 27% of all MPS pre-condition search authorisations between October 2019 and July 2020 applied across a whole borough (87 of 324 authorisations).

London Mayor Sadiq Khan has noted that pre-condition search can only be authorised where there is an immediate concern of serious violence or the widespread carrying of weapons, which, he said, “might be borough-wide”.

**Who can be searched using pre-condition search powers?**

Anyone in a public space in the designated area during an authorisation may be searched using pre-condition powers. However, officers cannot search people using the pre-condition search power for reasons unconnected to its authorisation. They should only search those that are likely to be involved in the violence that generated the authorisation. Officers must not to discriminate on the basis of a protected characteristic whilst using their pre-condition search powers.

**Best practice pre-condition search**

In August 2014 the Home Office published guidance to police forces on the best use of stop and search (BUSS). This guidance is specifically

In March 2019 the Home Office announced they were asking the College of Policing to create new guidelines on stop and search community engagement.\textsuperscript{50} In August 2019 the College of Policing published draft revisions to its APP guidance on stop and search.\textsuperscript{51} New guidance was published in July 2020.\textsuperscript{52}

One of the revisions incorporates BUSS guidance which encourages forces to inform local people of a pre-condition search authorisation into the APP. This requires forces to “have regard” to informing local people of a pre-condition search authorisation though it would not make it a legal requirement.

\textsuperscript{52} College of Policing, National police guidance on stop and search updated, 30 July 2020
1.3 Lawful stop and search

Officers *must* meet certain standards whilst conducting any stop and search. Failure to meet these standards will result in the unlawful use of their stop and search powers. Other standards represent guidance officers *should* follow.

**General principles**

Officers *must* complete their search as soon as possible taking no longer than is reasonable without being excessively thorough. If an officer is searching for something large like a bat or crowbar, they cannot spend a long time searching a person’s pockets.

Officers *must* treat people with dignity and respect during a stop and search encounter. They are required to consider a person’s vulnerabilities before conducting a search and exercise their search powers accordingly. Officers *should* make every effort to be polite even when those they are searching appear confrontational.

**Communication**

Officers *must* give those they have stopped to search certain information. They are *required* to tell them their name (except where officers reasonably believe that giving their name might put them in danger), their police station, the object they are trying to find and the legal basis of the search (including the reason for an authorised pre-condition search). Officers *must* inform those they are searching of their rights to a copy of the search record. Plain clothes officers *must* take reasonable steps to show those they are searching their warrant card.

The mnemonic GO WISELY is used to help officers remember what they *must* say and what it is helpful to say during a stop and search encounter. Officers *should* follow GO WISELY.

| G | A clear explanation of the officer’s **grounds** for suspicion, eg, info/intel or specific behaviour of person. |
| O | A clear explanation of the **object** and purpose of the search in terms of the article being searched for. |
| W | **Warrant** card, if not in uniform or if requested. |
| I | **Identity** of the officer(s): name and number or, in cases involving terrorism or where there is a specific risk to the officer, just warrant or collar number. |
| S | **Station** to which the officer is attached. |

57 College of Policing, APP stop and search: professional, section 2.2
E Entitlement to a copy of the search record within 3 months.

L Legal power used.

Y You are detained for the purposes of a search.

**Removing clothing**

Officers can require people to remove their outer coat or jacket, gloves, headwear or shoes in public.\(^{58}\) Officers may require people to remove more clothing when they have reasonable grounds, but this must be done out of public view. Searches must also be carried out near to where the person was stopped.\(^{59}\) This means that officers cannot take people to a place unreasonably far away to conduct more thorough searches.\(^{60}\)

Any search involving the removal of more clothing than an outer coat, jacket, gloves, headwear or shoes must be conducted by an officer of the same sex as those they are searching.\(^{61}\) Searches which expose intimate parts of the body must be conducted at a nearby police station. Officers should consult their supervisor before taking a person they have stopped to a police station for an intimate search.\(^{62}\)

**Use of force**

Officers must seek the cooperation of those they are searching but they may use reasonable force as a “last resort”.\(^{63}\) This means that they can handcuff people to conduct a search in some circumstances. However, they should not routinely handcuff those they search.\(^{64}\) Automatically handcuffing someone without seeking their compliance with a search would breach of PACE Code A.\(^{65}\)

The Library’s briefing [Police powers: an introduction](https://publications.parliament.uk/pa/cm201719/cmselect/cmpolpol/115/11501.htm) discusses the police’s power to use force in more detail.

**1.4 Monitoring**

Officers must make a written record of every stop and search encounter.\(^{66}\) Search records must state; the self-defined ethnicity of the person searched; the date, time and place of the search; the object that was being searched for; the legal basis of the search (including details of a relevant pre-condition search authorisation); and whether the search

66 s3, Police and Criminal Records Act 1984
resulted in an arrest.\textsuperscript{67} Officers \textit{should} turn on their body worn video during a search (if they have it).\textsuperscript{68}

Supervising officers \textit{must} monitor their team’s written search records to ensure they are conducting lawful searches.\textsuperscript{69} They \textit{should} monitor the records to identify evidence of searches are being conducted on the basis of stereotypes or generalisations.\textsuperscript{70} Supervisors with concerns about an officer’s stop and search records \textit{must} take appropriate action (including formal disciplinary proceedings when an officer’s actions constitutes a serious breach of policing standards).\textsuperscript{71}

Police leaders must monitor the broader use of stop and search across their force.\textsuperscript{72} Force leaders \textit{should} consider how effective their use of the power is, whether it is being targeted appropriately and what is causing any disparities in search rates by ethnicity.\textsuperscript{73}

Police forces \textit{must} consult with their Police and Crime Commissioners on arrangements for their stop and search records to be scrutinised by community representatives.\textsuperscript{74} Exactly how they do this is up to them. Most police forces operate monitoring panels consisting of local leaders and community volunteers. These panels scrutinise the operational use of stop and search and communicate local experiences to officers.\textsuperscript{75}

\textbf{Best practice}

All police forces in England and Wales have subscribed to Home Office \textit{best use of stop and search}\textsuperscript{76} guidance on monitoring.

Under BUSS officers now include information on the outcome of searches that do not result in an arrest in their written search records. Officers now record when they issue an out of court disposal and when no further action is taken.\textsuperscript{77}

Through BUSS forces operate “ride along” schemes which allow members of the public to join officers whilst they conduct stop and searches.\textsuperscript{78}

Forces also commit to require officers to inform people of their right to complain during a stop and search encounter. They then pledge to explain how they are using stop and searches when the number of complaints reaches a local threshold.\textsuperscript{79}

Recent changes to police guidance

In March 2019 the Home Office announced they were asking the College of Policing to create new guidelines on stop and search community engagement. In August 2019 the College of Policing published draft revisions to its APP guidance on stop and search. New guidance was published in July 2020.

The revised APP provides more advice on how forces should operate their local scrutiny panels and monitor body-worn video of stop and search encounters. Forces are expected to “have regard” to this new guidance but it does not form part of their legal requirements.
2. Use of stop and search

**Statistical note**

Data in this briefing is sourced from the Home Office (via stop and search statistics data tables and best use of stop and search statistics in the Police powers and procedures, England and Wales, year ending 31 March 2020 release) unless stated otherwise.

All statistics in this briefing exclude data for Greater Manchester Police (GMP) because GMP data for 2019/20 is unavailable. The Home Office has explained:

Following the transition from a legacy IT system to a new force system, Greater Manchester Police (GMP) have been unable to provide data returns to the Home Office, including stop and search. In previous years, GMP have accounted for between 1 and 4% of total stop and searches in England and Wales. Data for the first quarter of 2019/20 was collected prior to these issues and is included in the stop and search open data tables accompanying this publication. As the force have only been able to provide robust data for part of 2019/20, GMP’s stop and search data has been removed from year-on-year comparisons in this chapter to enable a consistent time series.83

There are some notable features to how stop and search powers are used in England and Wales.

**Police forces have reduced their use of stop and search over the past ten years, but the number of searches has recently increased.** Around 577,000 searches were conducted in 2019/20. 58% fewer than in 2009/10 but 52% higher than in 2018/19.

**The use of pre-condition search has increased markedly over the last three years.** Most searches are conducted using reasonable grounds powers (97% in 2019/20) but the number of pre-condition searches have increased from 622 in 2016/17 to 18,081 in 2019/20. Pre-condition searches accounted for around 5% of the overall increase in the use of stop and search between 2017/18 and 2019/20.

**A small number of forces conduct most stop and searches.** The Metropolitan Police Service (MPS) conducted almost half of all searches in 2019/20 (48%). 64% of all searches were conducted by just five forces: the MPS, Merseyside, West Midlands, Essex and South Yorkshire.

**Most searches are conducted to find drugs.** Around 63% of all reasonable grounds searches were conducted to find drugs in 2019/20 with around 16% conducted to find offensive weapons.

**Evidence suggests that police practice has improved but there remain concerns that some searches are not conducted lawfully and effectively.** Her Majesty’s Chief Inspector of Constabulary, Fire and Rescue Services (HMICFRS) has repeatedly called on forces to do more to monitor and scrutinise their use of the powers.

**Black, minority and ethnic (BME) people are more likely to be searched than white people.** BME people were 4 times more likely to be searched than white people in 2019/20. The difference was

---

83 Home Office, Police powers and procedures, England and Wales, year ending 31 March 2020, p6
particularly pronounced for black people, who were nine times more likely to be searched than white people. Section 3.2 of this briefing discusses the disparity in stop and search rates by ethnicity and how this affects police community relations.

2.1 Number of searches

Police officers conducted around 577,000 stop and searches in 2019/20. The number of annual searches fell year on year between 2009/10 (the year the current series began) and 2017/18 but the number of searches has more than doubled since 2017/18.84

Police leaders say they have increased their use of stop and search as part of their response to rising levels of violent crime, including violent crime connected to illegal drug dealing.85 Both the previous and current Conservative governments have supported an increased use of stop and search as part of their policy on violent crime. Recent Conservative governments have pursued a policy of supporting increased police enforcement alongside investing in early intervention projects to support at-risk youth.86

2.2 Reason for searching

Whilst police leaders say stop and search is being targeted to those that they suspect are carrying knives and weapons87 this is not reflected in the data. Around 63% of all reasonable grounds searches in 2019/20 were conducted to find controlled drugs. HMICFRS says the high prevalence of drug possession searches indicates that enforcement “efforts are not being effectively focused on force priorities”.88

---

84 Note: Section 4.4 of this briefing discusses recent reforms why the use of stop and search has reduced since 2010.
85 Home Affairs Committee, Oral evidence: Serious Violence, HC 1016, 26 March 2019
86 See: House of Commons Library, Serious violence and knife crime: Law enforcement and early intervention, January 2019
87 Home Affairs Committee, Oral evidence: Serious Violence, HC 1016, Q312
88 HMICFRS, Disproportionate use of police powers A spotlight on stop and search and the use of force, February 2021, p2
The high proportion of searches conducted to find drugs is frequently criticised by those that campaign against the use of stop and search. The campaign group Stop Watch argue that it demonstrates that stop and search is used to “over-police vulnerable communities for low level drug possession”. Her Majesty’s Inspectorate of Constabulary Fire and Rescue Services (HMICFRS) says drug searches contributes to “ethnic disproportionality” in stop and search rates “despite evidence that there is no correlation between ethnicity and rates of drug use”.

Adrian Hanstock, Deputy Chief Constable of the British Transport Police and national lead for stop and search and the National Police Chief’s Council’s, has conceded that the whilst many support the use of stop and search in response to violent crime the police are “faced with a dichotomy in needing to explain why the majority of grounds for search are to find drugs”. He has called on forces to make “determined efforts to explain the findings of crime analysis and intelligence that has prompted operational activity”.

### 2.3 Stop and search use by police force

There is little correlation between the type of area a force polices (urban/ rural) and the number of searches it conducts. Most forces conducted between three and six searches for every 1,000 people who live in their police force area. However, there are two notable outliers, the Metropolitan Police Service (MPS) and Merseyside Police, both of which police very urban areas. The MPS and Merseyside conducted 31 and 24 searches for every 1,000 people who live in their police force areas respectively.

---

92 Ibid

2.4 Use of pre-condition search

Just 3% of the all searches in 2019/20 were conducted using the pre-condition search power (roughly 18,000 of 577,000). The number of pre-condition searches has increased over the last two years after falling year-on year between 2009/10 and 2016/17. Despite recent rises, the number of pre-condition searches remains well below its 2009/10 level.

The recent increase in the use of pre-condition searches might be linked to a decision by the 2017-19 Conservative Government to relax voluntary guidance which encouraged forces to comply with stricter criteria when authorising them. In March 2019 the Government announced that it was no longer asking the seven forces listed in the table overleaf (and Greater Manchester Police) to follow best use of stop and search guidance (BUSS) on the authorisation of pre-condition searches. In April 2019, following Boris Johnson’s appointment as Prime Minister, this was extended to all English and Welsh forces. Whilst no force is now being encouraged to follow BUSS guidance by the Government some are still choosing to.

Forces that do not follow BUSS guidance can authorise pre-condition searches at a lower rank and with a lower degree of certainty that they are needed to prevent violence.

Around three quarters of the increase in use of pre-condition searches between 2018/19 and 2019/20 can be attributed to the MPS, the British Transport Police and Merseyside. These forces accounted for 75% of the pre-condition searches in 2018/19.

96 See section 1.2 of this briefing.
Compliance with law and guidance

Improvements between 2013 and 2017

Between 2013 and 2017 there was drive to improve standards in stop and search practice. This was in response to growing concerns at the end of the last decade that stop and search was being overused and poorly targeted.

In 2013 HMICFRS published an inspection of stop and search commissioned by then Home Secretary Theresa May. The inspectorate was highly critical of how forces were using stop and search. They were particularly concerned with evidence of non-compliance with the law and guidance in police stop and search records. HMICFRS (then HMIC) examined records of 8,783 searches and found that 27% did not include reasonable grounds to justify them.97

The 2013 inspection lead to reforms in police guidance and training on stop and search and a consequent reduction in its use by police forces (discussed in section 4.4 of this briefing). Since these reforms, evidence suggests that compliance with the law and guidance has improved. In 2017, the last time a thorough examination of stop and search records was published, the proportion of records HMICFRS examined without reasonable grounds had reduced to 6% (of 8,574 records). The inspectorate said it was “encouraging” that “the hard work carried out across the police service has resulted in sustained improvement”.

Recent concern

In February 2021 HMICFRS published a spotlight report on stop and search and the use of force. The report includes updated analysis of police stop and search records. They reviewed 9,378 records and found 14% had recorded grounds that were not reasonable. An increase on the level in 2017 but not a return to the level HMIC found in 2013. The

---

97 HMIC, Stop and Search Powers: Are the police using them effectively and fairly?, 2013, p8
98 HMIC, PEEL: Police legitimacy 2017: a national overview, December 2017, p22
“vast majority” of records examined by HMICFRS in 2021 had weak recorded grounds (80%).

HMICFRS has been repeatedly critical of how forces monitor their own records. They argue that forces could do more to further improve and maintain standards. In their 2020 assessment of stop and search they reported on the use of the powers by nineteen forces. Of these nineteen forces:

- Five were not monitoring a “wide enough range of data” to allow them to “fully understand” how their officers are using stop and search.
- Six had “insufficient external scrutiny arrangements”; and,
- “Only ten forces reviewed body-worn video footage of stop and search encounters as part of either their internal or external scrutiny”.

In October 2020 the Independent Office for Police Conduct (IOPC) raised concerns with the stop and search practice in the Metropolitan Police Service (MPS). The IOPC found the “legitimacy of stop and searches was being undermined” by:

- officers demonstrating a lack of understanding about the impact of the disproportionate use of stop and search against black people.
- officers poorly communicating with those they were searching.
- The “consistent use of force” during search encounters before seeking cooperation to conduct searches.
- the failure of officers to turn their body-worn video on at the start of a stop and search encounter as required by guidance.
- Officers continuing to seek further evidence to support searches after the initial grounds for the stop and search are proved unfounded.

The IOPC made eleven recommendations to the MPS for improvements in their stop and search practice. The MPS accepted all the recommendations.

3. Impact

Those in policing claim that when stop and search is targeted and conducted in line with the law and guidance, they can confiscate dangerous and prohibited items without undermining public trust in the police. Those opposed to stop and search argue that a history of poor use demonstrates it is a fundamentally flawed police power. They note that the long-standing disparity in search rates by ethnicity continues to ensure that BME people are disproportionally affected by the negative effects of stop and search.

Poorly targeted and conducted stop and search is widely acknowledged to damage police community relations, whilst evidence regarding the impact of stop and search on crime is more mixed. There is little evidence to suggest that stop and search provides an effective deterrent to offending. The use of stop and search appears to cause only marginal positive effects on levels of some crime types. Stop and search may be more effective at detecting criminals, but most searches result in officers finding nothing. Officers found nothing in 72% of searches in 2018/19 whereas 22% of searches resulted in a criminal justice outcome linked to the purpose of the search. It is estimated that 8% of all 2018/19 arrests were generated by a stop and search encounter.103

3.1 Impact on Black, Minority and Ethnic Communities

Black, Minority and Ethnic (BME) people have been consistently more likely to be stopped and searched than white people. BME people were four times more likely to be searched than white people in 2019/20. The disparity is particularly pronounced for black people who were nine times more likely to be stopped and searched than white people.104

The disparity between the search rate for black and white people has increased since 2009/10. This is the result of a larger reductions in the number of White people searched than Black people.105 Between 2009/10 and 2019/20 the rate for White people fell by 65% whilst the rate for Black people fell by 53%.

It is not disputed that unfair and poorly targeted stop and search creates and reinforces mistrust between those subjected to it and the police.106 The persistent disparity in stop and search rates by ethnicity can therefore be linked to the lower confidence in the police felt by BME

103 Ministry of Justice, Statistics on race and the criminal justice system 2018, November 2019, p20 [note: where ethnicity is known for the stop and search]
104 Note: Population breakdowns are based on the 2011 census. Given the length of time since the last Census, figures in this table should be considered estimates only.
105 Note: The statistical note on page 15 of this briefing applies to statistics in this section.
106 College of Policing, APP stop and search: professional, section 1; Home Office, PACE Code A, para 5.1; Home Office, Equality Impact Assessment: Relaxation of section 60 conditions in the best use of stop and search scheme, August 2019
people. A lack of confidence will make people less willing to report crime, undermining the police’s ability to protect them.

Policing leaders recognise they must continually monitor their use of stop and search in order to better understand the causes and consequences of disparities in search rates by ethnicity. However, poor monitoring has been a consistent cause for concern for Her Majesty’s Inspectorate of Constabulary, Fire and Rescue Services (HMICFRS). In February 2021 they reported that on average 17% of force stop and search records were missing ethnicity information (the proportion of search records missing ethnicity information ranged from 2% to 34%). HMICFRS says the disparity in search rates by ethnicity is likely being underreported as a result. They say no force “fully understands the impact of the use of [stop and search] powers” and “no force can satisfactorily explain why” ethnic disproportionality persists in search records.

The inspectorate has also been critical of police training in unconscious bias. In February 2020 they reported that only nine of nineteen forces they inspected had adequate training on unconscious bias.

What is causing the disparity in ethnic search rates?

There is no evidence to suggest that BME people are more likely to carry items that officers have powers to search for. Neither is there evidence that suggests they are more likely to be involved in criminality associated with stop and search enforcement. Other suggested reasons for

disparities in ethnic search rates (like black people spending more time in public spaces, or the under recording of searches conducted on white people) have also been shown to have no credible basis.\textsuperscript{114} Societal racism and its effects (including unconscious bias in some officers) appears to explain most of the disparity in stop and search rates by ethnicity.\textsuperscript{115} However, a tactical decision by the Metropolitan Police Service (MPS) to use stop and search more frequently than other forces may explain some of the disparity.

The disparities in ethnic stop and search rates for England and Wales are primarily influenced by stop and search activity in London because the MPS conducts more searches than any other force.\textsuperscript{116} London has a diverse population (around 40\% of people living in the capital are from BME backgrounds).\textsuperscript{117}

The search rates for Asian Londoners are similar to those for White Londoners. However, Black Londoners are subject to a disproportionate number of searches compared to White Londoners. Black people were around four times more likely to be searched than white people in the capital between April 2019 and March 2020.\textsuperscript{118}

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{metropolitan_police_search_rates.png}
\caption{Metropolitan Police search rates}
\end{figure}

### 3.2 Impact on crime

There is some evidence that the targeted use of stop and search might be associated with marginal reductions in local crime. This association appears strongest with certain types of crime. Available statistical analysis does not show a consistent link between the increased use of

\textsuperscript{114} EHRC, \textit{Stop and think: A critical review of the use of stop and search powers in England and Wales}, March 2010

\textsuperscript{116} Ministry of Justice, \textit{Statistics on Race and the Criminal Justice System 2018}, November 2018 p17

\textsuperscript{118} MPS, \textit{Stop and search dashboard} [last accessed October 2020]. \textbf{Note}: Population breakdowns are based on the 2011 census. Given the length of time since the last Census, figures in this table should be considered estimates only.
stop and search and levels of violence. The College of Policing (the body responsible for professional standards in policing) has concluded that stop and search should be used ‘carefully’ in response to knife crime.119

There is limited available statistical evidence on the impact of stop and search on levels of crime in England and Wales. The most robust studies look at Metropolitan Police Service (MPS) data.

A widely cited study published in the *British Journal of Criminology* analysed London data from 2004 to 2014. This study concluded that the effect of stop and search on crime is “likely to be marginal, at best”.120 The research found “some association between stop and search and crime (particularly drug crime)” but concluded that the use of the powers “has relatively little deterrent effect”.121 Further analysis of the same data has identified that “stop and search may be more strongly associated with crime at a more local level, assuming it is targeted appropriately in crime hot spots.”122

An analysis of Operation BLUNT 2, an MPS initiative to tackle knife crime run between 2008 and 2011, commissioned by the Home Office found no “discernible crime-reducing effects from a large surge in stop and search activity at the borough level”.123 However, positive impacts of stop and search at a lower level might have been “masked” by this borough level analysis.

Operation BLUNT 2 involved officers working across London, but its activity was concentrated in ten boroughs deemed to be most affected by knife violence. The increased use of stop and search, particularly pre-condition search, was “central” to the operations strategy to create a ‘hostile environment’ for those who routinely carry knives.124 Analysis of ambulance call outs associated with weapons-related injuries during Operation BLUNT 2 showed larger reductions in call outs in boroughs with smaller increases in weapons searches.125

### 3.3 Search outcomes

It is argued that stop and search can be effective at detecting crime even if it is not particularly effective at deterring it. The success of stop and search is therefore frequently measured by counting the number of times a search results in a ‘criminal justice outcome’ (an arrest or “out of court disposal”).126 The Government has favoured measures that count when criminal justice outcomes are linked to the reason for the

124 Ibid, p13
125 Home Office, *Do initiatives involving substantial increases in stop and search reduce crime? Assessing the impact of Operation BLUNT 2*, March 2016, p3
search because they exclude instances when officers detected criminality by chance. Measuring linked outcomes is said to encourage compliance with the law and guidance.

**Linked outcomes**

Most searches result in officers finding nothing. Officers found nothing in 76% of searches in 2019/20, whilst 20% resulted in an outcome linked to the search, a similar proportion to the number last year (only available comparable data).

**Stop and search by outcome**

Officers are more successful at finding certain things. Searches for drugs were more successful than average, with 25% resulting in a linked outcome. Searches for offensive weapons and items to be used in burglary, theft or fraud were least likely to be successful, 9% resulted in a linked outcome.

**Reasonable grounds searches resulting in a linked criminal justice outcome**

HMICFRS analysis demonstrates officers are more likely to find what they are looking for when they have stronger grounds for their search.

---

127 Home Office, *Best use of stop and search scheme*, August 2014, para 1.4
In February 2021 the inspectorate published analysis of the 9,378 search records. They found:

- 21% had “strong recorded grounds”. These searches had a find rate of 40%.
- 42% had “moderate grounds”. These searches had a find rate of 22%.
- 33% had “weak grounds”. These searches had a find rate of 17%.
- 14% had “reasonable grounds that were not reasonable”. These searches had a find rate of 14%.

**Arrests**

The proportion of searches resulting in an arrest has more traditionally been used to measure the success of stop and search. However, the “arrest rate” excludes searches which resulted in an out of court disposal and does not account for officers finding grounds for an arrest by chance.

The arrest rate has improved since 2010 but has never been above 20% across the current series. 13% of all reasonable grounds searches resulted in an arrest in 2019/20. It is estimated that 8% of all 2018/19 arrests were as a result of a stop and search encounter.

**Reasonable grounds searches arrest rate**

**Pre-condition searches**

Pre-condition searches are less successful than reasonable grounds searches. In 2019/20, 1.4% of pre-condition searches lead to officers finding a knife or offensive weapon (the only reason officers can use their pre-condition search power). The “find rate” for pre-condition searches since 2009/10 has typically been between 1% and 3%. The

4. History

Powers like stop and search have been part of British policing since the Victorian era. Modern-day stop and search powers have been in place since the late 1980s. Their use has continuously evolved through caselaw, legislative amendments and changes to police guidance.

The following provides a very brief history of the development of stop and search powers in England and Wales.

4.1 Pre-1980s

The precursor to modern day stop and search powers were former ‘sus laws’ (notably section 8 of the Vagrancy Act 1824). These powers were known as ‘sus laws’ because they allowed officers to search anyone, they suspected of being “disorderly” or a “rouge and vagabond”. It is now widely accepted that these powers were open to abuse and their use contributed to poor police community relations.130

Three days of severe disturbances in Brixton in August of 1981 caused national concern. The unrest in Brixton (and similar disturbances elsewhere in the country) predominately involved young black Britons clashing with the police.131 The Government commissioned Lord Scarman to undertake an inquiry into the disturbances. The Scarman Report concluded that the disturbances were an outburst of anger and resentment felt by black youths about how they were treated by police. The Scarman Report recommended replacing the sus laws with new stop and search legislation.132

The Government implemented Scarman’s recommendation on the sus laws through the Police and Criminal Evidence Act 1984 (PACE). PACE (amongst other things) repealed the former sus laws, introduced a power to stop and search people with “reasonable grounds” and required officers to follow PACE Code guidance on its use.

4.3 The Macpherson Report (1999-2012)

Sir William Macpherson’s inquiry into the Stephen Lawrence murder investigation found that the Metropolitan Police was institutionally racist.133

---

131 BBC News, The legacy of the Brixton riots, April 2006

Macpherson acknowledged that stop and search powers are required to help the police prevent and detect crime, but he called for greater scrutiny in how they were being used. He came to a “clear core conclusion” that disparities in stop and search rates by ethnicity demonstrated “racist stereotyping” by the police.\(^{134}\)

Macpherson recommended that all stop and search encounters should be recorded and these records should be monitored by those in policing.\(^{135}\) PACE Code A was amended and additional guidance was provided to the police on what constitutes “reasonable grounds” for a search.\(^{136}\)

### 4.4 Theresa May reforms (2013-2019)

During the 2000s the number of stop and search increased, reaching a peak of around 1.5 million in 2008/09.\(^{137}\) The rise in the use of stop and search powers lead to growing concern that the police were not using stop and search lawfully and effectively. There were again concerns that the persistent disparity between ethnic search rates demonstrated that officers were searching people based on the colour of their skin.

The then Home Secretary Theresa May asked Her Majesty’s Inspectorate of Constabulary (HMIC- now HMICFRS) to look at how forces were using the power. The resulting report, *Stop and Search Powers: Are the police using them effectively and fairly?*, found worryingly levels on noncompliance with the requirement to have “reasonable grounds” to conduct searches.\(^{138}\)

In response the Home Secretary bought forward a package of reforms designed to contribute to a

> …significant reduction in the overall use of stop-and-search, better and more intelligence-led stop-and-search, and improved stop-to-arrest ratios.\(^{139}\)

The reforms package included:

- The launch of the [best use of stop and search scheme](https://www.gov.uk/government/publications/best-use-of-stop-and-search-scheme) (BUSSS) to reduce the use of pre-condition searches and better monitor the use of stop and search on BME people.
- The revision of PACE Code A.\(^{140}\) The new PACE Code A reiterates that a personal factors, including ethnicity, are not reasonable grounds to conduct a search. It also sets new requirements on forces to allow for public scrutiny of their stop-and-search records;
- The commissioning of the College of Policing to develop “robust professional standards” (what would become the current APP on stop and search) including the introduction of a mandatory

assessment for officers on their “fitness to use stop and search powers”; and

- incorporating an assessment of stop and search powers into the annual inspections of police forces undertaken by HMICFRS.\footnote{HC Deb, Stop-and search, 30 April 2014, c831-833}

The reforms did result in a substantial reduction in the use of stop and search powers and contributed to improved practice amongst police officers.\footnote{See \textit{section 2} of this briefing} However, the disparity in stop and search rates by ethnicity did not improve as searches of white people fell faster than searches of BME people.\footnote{See \textit{section 3.1} of this briefing}
About the Library

The House of Commons Library research service provides MPs and their staff with the impartial briefing and evidence base they need to do their work in scrutinising Government, proposing legislation, and supporting constituents.

As well as providing MPs with a confidential service we publish open briefing papers, which are available on the Parliament website.

Every effort is made to ensure that the information contained in these publicly available research briefings is correct at the time of publication. Readers should be aware however that briefings are not necessarily updated or otherwise amended to reflect subsequent changes.

If you have any comments on our briefings please email papers@parliament.uk. Authors are available to discuss the content of this briefing only with Members and their staff.

If you have any general questions about the work of the House of Commons you can email hcenquiries@parliament.uk.

Disclaimer

This information is provided to Members of Parliament in support of their parliamentary duties. It is a general briefing only and should not be relied on as a substitute for specific advice.
