

Road cycling: statistics

Standard Note: SN/SG/06224
Last updated: 25 June 2013
Author: Matthew Keep

Section Social and General Statistics

This note summarises statistics on road cyclists. It focuses particularly on reported cyclist casualties on the roads of Great Britain.

In Great Britain, in 2011:

- 3.1 billion vehicle miles were travelled on pedal cycles, 1% of all vehicle miles taken on the roads
- Males travelled further, on average, on bicycle (79 miles per person) than females (20 miles per person)
- 107 cyclists were killed on the roads; the second lowest number in the last 62 years
- 3,085 cyclists were seriously injured on the roads; 17% more than at the start of this century
- Over four-fifths of cyclists killed or seriously injured were male

This information is provided to Members of Parliament in support of their parliamentary duties and is not intended to address the specific circumstances of any particular individual. It should not be relied upon as being up to date; the law or policies may have changed since it was last updated; and it should not be relied upon as legal or professional advice or as a substitute for it. A suitably qualified professional should be consulted if specific advice or information is required.

This information is provided subject to our general terms and conditions which are available online or may be provided on request in hard copy. Authors are available to discuss the content of this briefing with Members and their staff, but not with the general public.

1 Pedal cycle usage

Vehicle miles

In 2011, 3.1 billion vehicle miles were travelled on pedal cycle (bicycle); 11.6 billion fewer than in 1949 (14.7 billion vehicle miles).¹

In 2011, 1% of total vehicle miles travelled on roads in Great Britain were taken on bicycle, a substantially smaller proportion than the 34% of vehicle miles taken on bicycle in 1949.²

Since 2007 the amount of vehicle miles travelled by bicycle has increased annually:

- 19% more vehicle miles were travelled in 2011 than in 2007
- The proportion of total vehicle miles taken on bicycle increased from 0.8% in 2007 to 1.0% in 2011

Since the late-1960s vehicle miles travelled on bicycles in Great Britain has fluctuated between 2 and 4 billion vehicle miles per year.

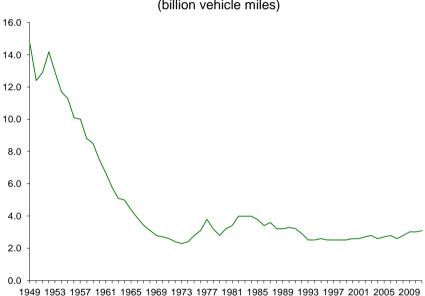

Chart 1: Bicycle usage, Great Britain, 1949 – 2011³ (billion vehicle miles)

Age and gender of cyclists

The average distance travelled on bicycle was greater amongst those aged 40-49 than other age groups in Great Britain; 89 miles on average were travelled per person in this age group, compared with 49 miles amongst all people.⁴

Males complete more miles on average (79 miles per person in 2011) than females (20 miles per person in 2011). In 2011, across all age groups, males travelled significantly further by bicycle on average, than females (see Chart 2 below).⁵

Purpose of journey

40

20

0

In Great Britain in 2011, an average of 47 miles were travelled per person where bicycle was the main mode. 39% of these miles were travelled whilst commuting with a further 45% travelled for leisure purposes, including: visiting friends; entertainment; sport; holiday; and, day trips.⁷

2 Cyclist road casualties

<17

17-20

21-29

Data in this section are sourced from Department for Transport (DfT) road casualty statistics. These statistics are drawn from information collected by police forces in Great Britain and cover all accidents involving a road vehicle that result in a personal injury. The figures are widely recognised as being an incomplete count of casualties, although figures on fatalities are generally acknowledged to be robust.⁸

The following analysis considers reported fatal and seriously injured cyclist casualties. Slight injuries are not considered as these are more likely to be under reported than more serious casualties.

2.1 Nationally

Fatalities

107 cyclist fatalities were reported on the roads of Great Britain in 2011, the second smallest number in the past 62 years. The largest number of reported fatalities over this period came in 1950 when 805 cyclists were killed on the roads.⁹

Since a peak in 1971 the cyclist fatality rate (number of fatalities per billion vehicle mile) has fallen towards the historically low levels seen today (see Chart 3 below).

⁶ ibid.

⁹ DfT. Reported Road Casualties Great Britian, Table RAS40007

Chart 3: Cyclist fatality rate, Great Britain, 1950 - 2011¹⁰ (fatality rate per billion vehicle miles)

Serious injuries

Table A1 in the statistical appendix provides data on cyclist fatalities and serious injuries since 1979.

In 2011, 3,085 cyclists were seriously injured in Great Britain, the greatest number this century. 2004 saw the smallest number of seriously injured cyclists over the period 1979 - 2011 (2,174 serious casualties). Fatalities are not included as serious injuries.

In 2011 the serious injury casualty rate (rate of seriously injured cyclists per billion vehicle mile) was 1,005 pbvm.¹¹ The cyclist serious casualty rate was at its lowest over the period 1979 - 2011 in 2006 (821 pbvm).

Chart 4: Cyclist serious injury casualty rate, Great Britain, 1979 – 2011 (rate per billion vehicle miles)

¹⁰ ibid.; and, DfT. National Road Traffic Survey, Table TRA0101.

¹¹ Per billion vehicle mile (pbvm)

Age and gender

In 2011 over four-fifths of cyclists killed or seriously injured were male. As discussed in section 1 the average male cycles significantly further than the average female in Great Britain.

Just over two-fifths of cyclists killed or seriously injured were aged 36-45, with a further 19% aged 26-35 and 17% aged 46-55; as was shown in section 1 these age groups travel further by bicycle than others.

Table 1. Cyclist casualties, by age and gender, Great Britain, 2011

	A	II	Fem	nale	M	ale

Road class

In 2011, the cyclist fatality rate on A roads was 104 pbvm and the serious injury rate was 2,407 pbvm; significantly higher than on other road types.

There were more cyclist fatalities on rural roads, in number (55 fatalities) and as a rate (67 pbvm), than on urban roads. Rural A-roads had a particularly high cyclist fatality rate (273 pbvm) and serious injury rate (2,798 pbvm) rates, relative to other road types.

Table 2: Reported cyclist casualties, by urban and rural roads, road class, Great Britain, 2011.

2.2 Regions and parliamentary constituencies

Regions

Table A2 in the statistical appendix shows the number of cyclists killed and seriously injured in Great Britain, by region, from 2005 to 2011.

Chart 1 and Chart 2 show the number of killed or seriously injured (KSI) casualties and the KSI casualty rate respectively, for English regions and Scotland and Wales. In 2011 the South East region had the greatest number of KSI casualties (607 cyclists), although the rate was highest in London (1,586 KSI pbvm). London also had the second largest number of KSI casualties (571 cyclists).

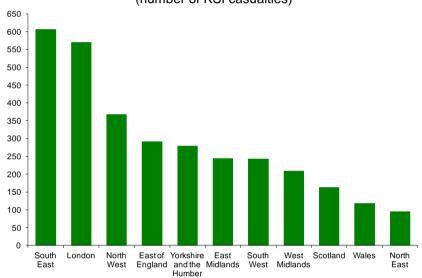

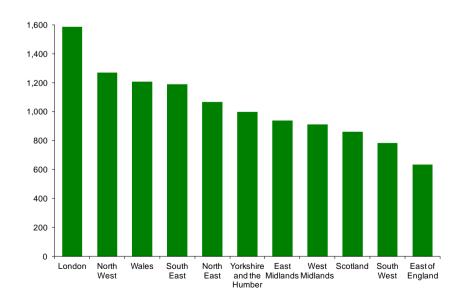

Chart 6: Cyclist KSI casualty rate, English regions and Scotland and Wales, 2011¹³ (rate per billion vehicle miles)

¹² DfT. Road Casualties Online

¹³ DfT. Reported Road Casualties Great Britian, Table RAS30053; and, DfT official

Parliamentary constituencies

Table A3 in the statistical appendix shows the number of KSI cyclist casualties in Great Britain, by parliamentary constituency. It is not possible to create a casualty rate per vehicle mile, due to a lack of traffic data for parliamentary constituencies.

In 2011, the Cities of London and Westminster constituency saw the largest number of KSI cyclist casualties; the 41 KSI casualties are those killed or seriously injured within the constituency, not the number of residents injured.

Table 3. Ten constituencies with most reported KSI cyclist casualties, Great Britain, 2011

	KSI casualties
Cities Of London and Westminster	41
Islington South and Finsbury	34
Bethnal Green and Bow	30
Holborn and St Pancras	29
Vauxhall	29
Bermondsey and Old Southwark	28
Cambridge	25
Hackney South and Shoreditch	23
Portsmouth North	23
Oxford East	22

2.3 Comparison with other modes of transport

Of the modes of transport shown in Table 4:

- only motorcycles have a higher KSI casualty rate than pedal cycles
- both motorcycles and pedestrians have a higher fatality rate than pedal cycles

Table 4: Passenger casualty rates by mode, Great Britain, 2011
